The longest outward passage was made by the Europe, she having been thirty-six days ; and the shortest by the England, in eighteen days. All the outward passages average twenty-two days and a half. The homeward passages average thirty-three days and seventeen hours.

The Orpheus made a homeward passage in twenty-two days, the Oxford in twenty-three, and the England in twenty-five, making the three shortest. The longest was made by the North America, in forty-eight days.

The different Lines of New York Sailing Vessels during the following Months of 1845 were, according to these respective Programmes, as under.

The Proprietors of the several Lines of Packets between New York and Liverpool have arranged for their sailing from each port, to succeed each other in the following order, viz. :—

The average of passages from New York to Bristol, thirteen days and three-quarters. The shortest passage was twelve days and a quarter; the longest fifteen days.

The average of passages from Bristol to New York was sixteen days and one-eighth; the shortest having been thirteen days, the longest twenty-one days and a half.

The average of all the passages, out and home, was fifteen days. The whole time employed in the first fifteen passages, excluding fifty-two days, during which the ship lay up refitting, was twelve months and one day. The whole time spent at sea, in the fifteen passages, was 225 days. In these 225 days the ship must have sailed, in all, about 51,000 miles, giving an average progress of 227 miles per day, and about nine and a half miles per hour, out and home, summer and winter.

By one of the passages from New York to Bristol, despatches by the ship were received in Liverpool and London on the thirteenth day after leaving New York, say on the evening of the 17th of October, having left New York on the afternoon of the 4th of that month. By the same, and by one other passage, passengers and despatches reached Paris, by way of England, on the fifteenth day.

#### STEAM BETWEEN NEW YORK AND LIVERPOOL.

The Great Western Steam-ship Company's steam ship, the *Great Western*, 1700 tons, 450 horse power, B. R. Matthews, Esq., commander; the *Great Britain*, 3600 tons, 1000 horse power, Lieutenant James Hoskins, R. N. commander, are intended to sail as follows:

##### GREAT WESTERN.

From Liverpool.	From New York.
Saturday.....May 17	Thursday.....June 12
Saturday.....July 5	Thursday.....July 31
Saturday.....Aug. 23	Thursday.....Sept. 18
Saturday.....Oct. 11	Thursday.....Nov. 6

#### GREAT BRITAIN.

From Liverpool. From New York.

Saturday.....July 26	Saturday.....Aug. 30
Saturday.....Sept. 27	Saturday.....Oct. 25
Saturday.....Nov. 23	Saturday.....Dec. 20

Fare per *Great Western*, 100 dollars, and five dollars stewards' fees. Fare per *Great Britain* will be announced in a future advertisement.

For freight or passage, apply to Richard Irvin.

A TABLE of all the Passages of the Transatlantic Steam Ships Company's Ships, *Royal William* and *Liverpool*, between *Liverpool* and *New York*, from July, 1838, to June, 1839, showing the time of their departure from, and arrival at, each port.

NAMES.	FROM LIVERPOOL.			NAMES.	FROM NEW YORK.		
	Sailed.	Arrived.	Days.		Sailed.	Arrived.	Days.
	date.	date.	No.		date.	date.	No.

Average <i>Royal William</i> and <i>Liverpool</i> from England, 18 days.				Average <i>Royal William</i> and <i>Liverpool</i> to England, 15 days.			

These passages are calculated from *dock to dock*, and, it will be observed, the *Liverpool's* passages are mostly made in the winter months, not the best calculated for making short voyages. Her four trips to the westward have been made within forty-two hours of the same time. She has, with but one exception, made the southern passage; thereby lengthening her voyage, but avoiding the risk of running upon ice, and obtaining for her passengers mild and fine weather.

The *Great Western* will have performed about eighty voyages to and from Bristol or *Liverpool* and *New York* from the 8th of April, 1838, to December, 1845. Average voyages, fifteen days twelve hours, outward. The passages from Bristol being somewhat longer. The average of the homeward voyages was thirteen days nine hours. One voyage from Bristol, touching at *Madeira*, was performed to *New York* in twenty-nine days one hour, including one day four hours' stoppage at *Madeira*.

The following statement of the time occupied in making the passage between *Liverpool* and *Halifax*, is a most important document in steam-navigation, as not only showing the certainty of a quick communication across the Atlantic at all times of the year, but at the average rate at which it may be made. The passage out, gives 7.86 miles per hour; while that home (influenced by prevailing winds and currents), gives 9.3 miles. The mean between these may be taken as the average speed obtained at sea, or what may be called the *sea-rate*. In this case, the *sea-rate* is 8.58 miles per hour.

#### MARSEILLES LINE OF PACKETS.

The undermentioned ships will be regularly despatched from hence on the 1st, and from Marseilles on the 10th of each month during the year, as follows:—

SHIPS.	CAPTAINS.	From New York.	From Marseilles.
Gaston.....	Stephen Coulter..	April 1	June 10
Missouri.....	John Silvester....	May 1	July 10
Prince de Joinville (new)....	Wm. W. Lawrence	June 1	Aug. 10
Marcella (new), 550 tons.....	G. Hagar.....	July 1	Sept. 10
Nebraska, do. do.	Hellespont.....	Aug. 1	Oct. 10

They are all fast-sailing, coppered, and copper-fastened vessels, and commanded, or to be commanded, by men of experience. Their accommodations for passengers are all that need be desired in point of comfort and convenience, having excellent state-room accommodations.

Punctuality in the days of sailing from both ports may be relied on.

Goods addressed to the agents, will be forwarded free of other charges than those actually paid.

#### NEW YORK AND HAMBURG PACKETS.

The following ships sail from New York to Hamburg on stated days:—

Barque Newton, Captain Weinbolts.  
Ship Howard, Captain Paulsen.  
Barque Miles, Captain Ehlers.  
Barque Franklin, Captain Sleeboom.  
Barque Washington, Captain Kruger.  
Ship Stephani, Captain Roluffs.  
Ship Brarens, Captain Flor.

These ships are all coppered and copper-fastened, and commanded by men of experience in the trade. Having good accommodations for cabin and steerage passengers, persons wishing to have their friends from Germany can secure their passage. Other ships are also engaged in the trade with Hamburg, Bremen, &c.

#### LOUISIANA AND P.

For the better accommodation, the ships will be despatched from New York on the 20th, and 25th, of each month, and continuing unappointed for the remainder of the summer months. The following is the arrangement:—

Ship St. Mary, Ca.  
Ship Mississippi.  
Ship Shakespeare.  
Ship Yazoo, Capt.  
Barque Genesee.  
Ship Oswego, Ca.  
Ship Martha Wa.

These ships were all built expressly for packets, are recently been newly coppered with accommodations for fort. They are commanded by men of experience, and will make every exertion to arrive at all times be towed by steamboats.

#### HOLM

To sail every ten days

Ship Orleans, S.  
Ship Arkansas, B.  
Ship Alabama, D.  
Ship Saratoga, W.  
Ship Louis, Leav.  
Ship Rieni, Clar.  
Ship Sultana, Des.  
Ship Vicksburg, I.

These are all fast-sailing vessels, built expressly for great experience, and will arrive at all times by steamboats, and will make every exertion to arrive at all times be towed by steamboats, and will accommodate both shippers and

Letter-bags are kept for the reception of ship-letters, at Gilpin's Reading Room, Merchants' Exchange; and Hale's Ship Letter Office, No. 58, Wall-street, for New York; Amsterdam; Barbadoes; Carthage; Constantinople; Curaçao; Galveston; Guayaquil; Hamburg; Havana; Havre; Kingston, Jamaica; Liverpool; London; Madeira; Manila; Naples; New Orleans; Palermo; Panama; Port-au-Prince; Rio Janeiro; Rotterdam; Sandwich Islands; Smyrna; Stettin; St. John's, N. F.; St. Pierre, Martinique; St. Vincent; Turk's Island; Valparaiso; Vera Cruz.—(See *Post Office of the United States, generally; New Post Office Law; Miscellaneous Statements.*)

The following statement includes the names and tonnage of the principal British and American vessels which arrived at the port of London from the United States, during the first six months of the year 1845, though not comprehending

half the number actually engaged in trade between those ports and the United States.

*From New York.*—BRITISH: Clutha, 498 tons. AMERICAN: Prince Albert, 980 tons; Washington, 300 tons; Westminster, 608 tons; St. James, 617 tons; Northumberland, 990 tons; Gladiator, 674 tons; Mediator, 647 tons; Switzerland, 590 tons; Quebec, 655 tons; Robert Fulton, 550 tons; Wellington, 703 tons; Hendrick Hudson, 821 tons; Talisman, 350 tons; Jessore, 500 tons; Arethusa, 336 tons; Toronto, 609 tons.

*From Boston.*—BRITISH: none. AMERICAN: Talisman, 350 tons; Vespasian, 400 tons; Ellen, 400 tons.

*From Charleston.*—BRITISH: Marion, 427 tons. AMERICAN: Ark, 400 tons; Abagin, 350 tons; Brontes, 400 tons.

*From Baltimore.*—BRITISH: none. AMERICAN: Laura, 300 tons.

Names and tonnage of principal British and American vessels which arrived at Liverpool, during the same period.

*From New York.*—BRITISH: Brothers, 537 tons. AMERICAN: Europe, 613 tons; Aderon Dark, 608 tons; Samuel Hicks, 818 tons; New York, 972 tons; Toronto, 609 tons; St. Patrick, 896 tons; Liverpool, 1129 tons; Siddons, 900 tons; Columbus, 664 tons; Sea, 800 tons; Ashburton, 1077 tons; Ann, 218 tons; Stephen Whitney, 995 tons; Yorkshire, 1058 tons; Cambridge, 877 tons; Patrick Henry, 982 tons; St. Lawrence, 425 tons; Paul Jones, 650 tons; Oxford, 707 tons; Rochester, 845 tons; Indiana, 607 tons; Garrick, 900 tons; George Washington, 609 tons; Ohio, 757 tons; St. George, 845 tons; Montezuma, 982 tons; Virginian, 650 tons; Montecello, 390 tons; Hottinguer, 1000 tons; Kalamazoo, 798 tons; Lancashire, 600 tons; Roscius, 1067 tons; John R. Skiddy, 908 tons; Adirondack, 761 tons; Sheffield, 564 tons; Independence, 800 tons; Isabella, 745 tons; Waterloo, 900 tons; Henry, 434 tons; Southern, 700 tons; Pacific, 600 tons; Henry Clay, 1300 tons; Shenandoak, 750 tons; Queen of the West, 1334 tons; Sheridan, 1000 tons; Tarolinta, 570 tons; Caledonia, 545 tons; Haidee, 647 tons; Empire, 1000 tons; London, 700 tons.

*From Boston.*—BRITISH: none. AMERICAN: Iberias, 329 tons; Concordia, 641 tons; Ashburton, 553 tons; Barnstable, 873.

*From Philadelphia.*—BRITISH: none. AMERICAN: Savannah, 816 tons; Monongahela, 500 tons; Thomas P. Cope, 845; Saranak, 816 tons; Susquehanna, 560 tons.

*From Charleston.*—BRITISH: Mandane, 360 tons; Safeguard, 290 tons; Conrad, 367 tons; Creole, 455 tons; Sarah Stewart, 365 tons; Borneo, 458 tons; John Renwick, 402 tons; Promise, 446 tons; Macao, 482 tons; Selina, 258 tons; Sarah, 517 tons; Jessie, 679 tons; Chieftain, 325 tons; Burrel, 402 tons; Lavinia, 374 tons; Corsair, 476 tons; Sir Henry Pottinger, 426 tons; Lady Bagot, 455 tons; Robert Ker, 357 tons; Ann Kenny, 486 tons; Lady Sale, 736 tons; Cremona, 506 tons; Wilson, 281 tons; Lady Fitzherbert, 386 tons; Lord Ashburton, 1009 tons; Cambridge, 494 tons; Ross, 645 tons; Consbrook, 423 tons; Conqueror, 657 tons; Thetis, 584 tons; Constitution, 558 tons; Janet, 320 tons; Portland, 541 tons; Leonard Dobbin, 611 tons; Morgiana, 354 tons; Kingston, 431 tons; Johnstone, 436 tons; Evergreen, 574 tons; Kilty, 388 tons. AMERICAN: Lochinvar, 635 tons; Swanton, 709 tons; Augusta, 708 tons; Thomas Bennett, 505 tons; Shenandoah, 700 tons; John Baring, 430 tons; Arabella, 696 tons; Harriett and Jessie, 453 tons; Victor, 394 tons; Columbia, 344 tons; Xaylon, 420 tons; Elsinore, 597 tons; John Fehrman, 428 tons; Delia Walker, 494 tons; Tartar, 573; Susquehanna, 560 tons; B. Aylmar, 437 tons; Marengo, 426 tons; Richmond, 475 tons; Treton, 428 tons; Ambassador, 452 tons; Virginia, 612 tons; Peter Hattrick, 355 tons; St. Mark, 545 tons; Roger Sharman, 496 tons; Persia, 438 tons; Thames, 372 tons; Southport, 499 tons; John Baring, 550 tons; Swatra, 747 tons; Republic, 644 tons.

*From Savannah.*—BRITISH: Oronocto, 609 tons; Ben Nevis, 955 tons; Douglas, 650 tons; Kingston, 431 tons; Coronation, 739 tons; Ocean Queen, 568 tons; Myrene, 244 tons; Envoy, 481 tons; Devonport, 767 tons; Primrose, 553 tons; Syria, 580 tons; Leander, 813 tons; Ottawa, 562 tons; Fanny, 367 tons; Robert, 665 tons; Acadia, 800

tons; Alexander Grant, 689 tons; Britannia, 609 tons; Severn, 609 tons; Glasgow, 611 tons; James and Mary Simnot, 533 tons; Lady Thomas, 765 tons; Stadacona, 619 tons; Lady Falkland, 672 tons; Carleton, 404 tons; Sherbrooke, 505 tons; Lord Canterbury, 505 tons; Queen Victoria, 588 tons; Parmelia, 811 tons; Leshmago, 741 tons; Leander, 733 tons; Robert A. Parke, 389 tons; Socrates, 457 tons; AMERICAN: Robert Shaw, 402 tons; Powhattan, 640 tons; Niagara, 558 tons; Lancaster, 798 tons; Susannah Cumming, 540 tons; Tamerlane, 595 tons; Harward, 340 tons; Stirling, 493 tons; Ch. Clyde, 413 tons; Eli Whitney, 528 tons; Howard, 387 tons; Elizabeth, 531 tons; Edwin, 339 tons; Denmark, 554 tons.

*From Mobile.*—BRITISH: Civion, 292 tons; Superb, 519 tons; Lady Milton, 636 tons; John Munn, 637 tons; John and Robert, 800 tons; Washington, 800 tons; Charles Humberstone, 640 tons; John Bell, 501 tons; James Moran, 600 tons; Harriham, 451 tons; Rankin, 1120 tons; Lanark, 648 tons; Satell, 731 tons; Herculean, 317 tons; John Bentley, 783 tons; Alexa Lochlibo, 1006 tons; Rasalama, 780 tons; Jane, 781 tons; W. 860 tons; Malabar, 686 tons; Mary, 342 tons; Duncan, 644 tons; Wallace, 861 tons; Asia, 647 tons; Symmetry, 1009 tons; Margaret Polloc, 917 tons; Ottawa, 1147 tons; Duncan R. head, 935 tons; John Campbell, 624 tons; Llantarnum Ab, 799 tons; Tay, 512 tons; Queen, 650 tons; Aurora, 709 tons; beth, 549 tons; Bytown, 346 tons; Lucy, 396 tons; Suffolk, 50 tons; Burlington, 534 tons; Palestine, 469 tons; Pactolus, 50 tons; Clara, 525 tons; Elizabeth Denison, 806 tons; Isaac N. Howell, 766 tons; Oxnard, 688 tons; Dublin, 650 tons; Shann, 525 tons; North Sea, 379 tons; Agnes, 429 tons; Superior, 570 tons; Memphis, 800 tons; Carthage, 426 tons; Virginian, 700 tons; Joshua Bates, 620 tons; Epaminondas, 500 tons; William Godd, 550 tons; Hudson, 713 tons; Powhattan, 590 tons; Carrol, 68 tons; Great Britain, 694 tons; Bowditch, 578 tons; Lancaster, 713 tons; Rockingham, 400 tons; Robert Parker, 599 tons; T. Leon, 505 tons; Hector, 560 tons; Java, 538 tons; Brewster, 600 tons; Portsmouth, 520 tons.

*From New Orleans.*—BRITISH: Gossypium, 745 tons; Tamer Campbell, 651 tons; Zanoni, 590 tons; Magnificent, 731 tons; Bonadea, 625 tons; Favourite, 661 tons; Victory, 590 tons; Lord Margaret, 795 tons; North Pole, 312 tons; Pursuit, 731 tons; Lord Sandon, 678 tons; Mayfield, 824 tons; Lanarkshire, 689 tons; Columbine, 607 tons; British King, 637 tons; Coromandel, 662 tons; Amoy, 648 tons; Grampian, 774 tons; Glentanner, 610 tons; Yenor, 679 tons; Gertrude, 703 tons; W. Abrams, 706 tons; Roths, 889 tons; Susan, 537 tons; Huron, 498 tons; Venelia, 581 tons; Seraphine, 643 tons; Marchioness of Abercorn, 875 tons; War Miltiades, 675 tons; Glenlyon, 908 tons; Lamport, 743 tons; Springfield, 547 tons; Lord Seaton, 730 tons; Themis, 1004 tons; Good Intent, 592 tons; Importer, 734 tons; Swan, 859 tons; Rev. #### BRITISH NAVIGATION WITH THE NORTH AMERICAN COLONIES.

The Transatlantic ships employed in trade between the United Kingdom and the British North American colonies, are adapted in size to the cargoes which they carry, and the depth of water in the colonial or British ports, in which they load and discharge.

The ships which carry timber from the ports of the *St. Lawrence*, *Chaleur* bay, *Miramichi*, and the *Bay of Fundy*, range from 150 tons to above 1000 tons. The principal ships laden with timber, &c., from the North American colonies, which discharged their cargoes at the ports of *London* and *Liverpool*, during the first six months of the year 1845, were the following, viz.:—

**PORT OF LONDON.**—The *Themis*, of *St. John's*, *New Brunswick*, from *St. John's*, 1004 tons, 30 men. The *Schoodiac*, of *St. Andrew's*, *New Brunswick*, from *St. Stephen's*, 1005 tons, 31 men. *Princess Royal*, of *St. John's*, *New Brunswick*, from *St. John's*, 1096 tons, 29 men. *Indus*, of *Glasgow*, 822 tons, 26 men. *Manchester*, of *Quebec*, 825 tons, 25 men. The greater number of the other ships in this trade, and those which discharge at the port of *London*, the *Clyde*, *Leith*, *Bristol*, *Cork*, &c., range from 300 tons to 700 tons. Those which are laden at the shallow ports of the North American colonies, with timber and deals, and discharge at the shallow ports of the United Kingdom, range as low as from 300 tons to about 120 tons.

Vessels employed in the trade between the United Kingdom and *Newfoundland*, are seldom above 200 tons, and frequently of much less burden. Those trading with *Nova Scotia*, *Cape Breton*, and *Prince Edward Island* (some of the timber ships excepted), are usually of moderate burden.

**WEST INDIES.**—The ships engaged in the *West India* trade would formerly be considered of very large burden; but compared with those engaged in the *North American* trade, they are not usually half the capacity.

**SOUTH AMERICAN TRADE.**—Generally, the trade carried on with *South America*, is in small ships and brigs.

**EAST INDIES AND CHINA.**—The most splendid ships belonging to the British empire are those employed in the trade with *India* and *China*. This was at all times the case. These magnificent ships are built chiefly in the river *Thames*, the *Tyne*, the *Mersey*, and the *Clyde*. The following vessels are among the principal ships which arrived during the first six months of the year 1845, from *India*, &c., in the port of *London*, viz.:—

From *CALCUTTA*, the *Wellesley*, of *London*, 1013 tons, 60 men. *Monarch*, of *London*, 1282 tons, 84 men. *Prince of Wales*, of *London*, 1241 tons, 84 men. The

*Queen*, of London, 1244 tons, 82 men. *Gloriana*, of Newcastle, 1031 tons, 62 men. *Owen Glen*, of London, 971 tons, 68 men. *Maidstone*, of London, 938 tons, 52 men. *Somes*, of London, 785 tons, 65 men. *Westminster*, of London, 610 tons, 28 men. Besides a great many other ships of from 400 to 600 tons.

From MADRAS, the *Equestrian*, of London, 800 tons, 37 men. The *Larkins*, 700 tons, 25 men. From 300 tons to 600 tons.

From BOMBAY, the *Universe*, of Dundee, 719 tons, 26 men. The *Carnatic*, of London, 632 tons, 24 men. of less burden.

From CANTON, the *Hindustan*, of London, 708 tons, 37 men. The *Royal Albert*, of Greenock, 930 tons, 52 men. The *L'Arne*, of Liverpool, 577 tons, 21 men. Besides other ships of from 300 to 500 tons.

In the trade with Singapore, New South Wales, and other eastern ports, the ships vary in size from 250 tons to 600.

The ships employed in the trade between the ports of Liverpool, Mersey, and ports in the East Indies, China, and other eastern ports, vary from 300 tons to 700 registered tons.

The following summary of the cargoes discharged by some of the ships arriving from the *United States*, and from other parts of the world at London and Liverpool, will be found curious and instructive.

The cargo discharged in February, 1845, at the St. Katherine's Dock, by the American ship *Victoria*, of 938 tons, 30 men, from New York, consisted of exports: viz., 4164 barrels of turpentine, 2300 barrels of codfish, 66 tierces, 19 half-tierces, and 1 hogshhead of tobacco, 2629 bushels of beef, 70 barrels, 48 half-barrels of pork, 161 cases, 161 barrels of tallow, 161 cases, 64 casks of general merchandise, 2075 cases of cloths, 25 boxes of black weights, 1 case, 1 cask broom corn, 30 boxes and 17 casks of broom handles, and 6 doz.

The *Prince Albert*, of New York, 980 tons, 37 men, from the month previously in the port of London, 44 casks, 23 cases, 1 case of general merchandise, 25,440 staves, 122 logs of cedar, 1050 casks of oil, 20 barrels of lard oil, 16 casks of spermaceti, 1492 barrels of spirits of turpentine, 79 pigs of lead, 1 case of worsted, 7 hogsheads and 50 kegs of tobacco, 235 bales of hemp, 4901 bushels of corn, 110 barrels of pork, 125 tierces of beef, 1054 cases, and 1 tierce of hams, 2 hogshheads of tallow, 10 kits of salmon, 1 cask boxes, and 1 barrel of bread.

The *Northumberland*, of New York, 990 tons, 32 men; discharged similar articles, with the addition of 197 bundles of whalebone.

The *Wellington*, the *Hendrick Hudson*, the *Westminster*, the *Mediator*, the *Switzerland*, the *Gladiator*, the *Robert Fuller*, and all these will comprehend a view of the imports from the *United States*, if we add tobacco, and an occasional vessel from Baltimore. The outward cargoes consist chiefly of British manufactures.

The *Talisman*, of Boston, discharged in London, 60,000 lbs. of tips, 3 cases of merchandise, 1 case of hoops, 39 bales of hempen cloth, 23½ tons of oil, and 500 tons of ice.

The *Louisa*, of the United States, from Baltimore, 300 tons, 577 tierces of beef, 584 barrels and 164 tierces of pork, 9 casks of tongues, 51 casks of tallow, 1 barrel and 50 half barrels of suet, 100 barrels of pork, 21 hogshheads of quercitron bark, 3 tierces

clover-seed, 13 tierces and 6 tons of sassafras root, 1 case of merchandise, 10 hogsheads of tobacco, 1 tierce of bees'-wax, and 30 kegs of butter.

Cargoes of timber from British America.—The *John and Mary*, of Quebec, from Quebec, 12 men, 286 tons; discharged 20 pieces of white, and 450 pieces of red pine, 400 deals, and 3922 staves.

The *Clyde*, of St. John's, from St. John's, New Brunswick, 20 men, 711 tons; discharged 288 pieces of pine and 139 pieces of birch timber, 13,737 deals, 5650 palings, 2600 pieces of lathwood, 3840 staves, 43 boards, and 4 fathoms firewood.

The *Junior*, of Quebec, from Quebec, 19 men, 677 tons; discharged 20 pieces of oak timber, 50 pieces of elm, 58 pieces of pine, 12,474 deals, and 8610 staves.

The *Liverpool*, of Halifax, from St. John's, New Brunswick, 20 men, 536 tons; discharged 335 pieces of pine timber, 11,959 deals and ends, 7719 head staves, 3 cords of lathwood, and 3 barrels of furs and skins.

The following are a few of the cargoes which were discharged in London, from ships, which arrived from India, China, &c.

The *Queen*, of London, from Calcutta, 42 men, 1244 tons; discharged 1385 chests of indigo, 246 bales of raw silk, 122 chests and 4029 bags of sugar, 991 bags of saltpetre, 102 hogsheads of oil seed, 4600 packets of linseed, 2500 bundles of rattans, 53 cases of silk piece goods, 38 cases of silk corahs, 545 bags of rice, 2 butts and 1 pipe of returned wine, 22 tubs and 243 boxes of camphor, 5 cases of cheroots, 10 barrels of pepper, 10 cases of lac dye, and 6 cases of arrowroot.

The *Prince of Wales*, of London, from Calcutta, and the Cape of Good Hope, 84 men, 1244 tons; discharged 3762 bags of sugar, 101 bales of raw silk, 810 chests and 2 boxes of indigo, 110 cases of castor oil, 1378 bags of rice, 3300 bundles of rattans, 705 bundles of cherelta, 6 barrels of senna, 100 barrels of jute, 1250 packets of oil-seed, 1 box of cowries, 36 cases of piece goods, 100 puncheons of rum, 1778 bags of saltpetre, 1400 packets of cowries, 12 cases of sundries, 6 chests of tea, 25 butts and 20 pipes of wine, shipped in London for the voyage round the Cape of Good Hope, and 1 box of ostrich feathers.

The *Walmer Castle*, of London, from Canton, Hong-Kong, and Manilla, 48 men, 656 tons; discharged 3622 chests and 598 half chests of tea, 13,425 bags of sugar, and 26 tons of sapan wood.

The *Monarch*, of London, from Calcutta and St. Helena, 84 men, 1282 tons; discharged 3094 bags of sugar, 394 chests of indigo, 3020 bags of saltpetre, 635 bags of horn tips, 431 bales of raw silk, 1758 packets of linseed, 23 chests of lac dye, 19 cases of piece goods, 2 trusses of silk, 50 puncheons of rum, 100 bales of jute, and 90 bags of rice.

The *Great Britain*, of London, from Montreal, 20 men, 492 tons; discharged 3439 barrels of flour, 2179 staves, 75 pair of oars, 252 deals, 108 handspikes, 550 barrels of ashes, and 1 case of books.

The *Peruvian*, of St. John's, from St. John's, New Brunswick, 16 men, 373 tons; discharged 2200 barrels of whale and 350 barrels of sperm oil, 10 tons of whale-fins, 4 logs of mahogany, and 2052 deals and battens.

The *Thetis*, of Goole, from St. Petersburg, 9 men, 324 tons; discharged 1499 chetwerts and 55 bags of linseed, 50 bundles and 43 half bundles of hemp, 2 bales of horse tails, 3 bales of hair and 1 bale of horse and ox hair, 1 bale of bristle waste, 23 bales of feathers, 19 bales of wool, 30 bales of calf skins, 1 box of merchandise, 133 bales of horse manes, 59 casks and 68 half casks of bristles, 2 cases of isinglass, 1 fathom of firewood, and 1900 pieces of lathwood.

The *Universe*, of Dundee, from Bombay, 26 men, 719 tons; discharged 564 bags of coffee, 173 bundles and 432 bags of turmeric, 50 bales of coir yarn, 185 bags of senna leaves, 24 boxes of arrowroot, 14 boxes of gum dammar, 1 box of poppy, 3 boxes of shellac, 306 bags of pepper, 63 cases of olibanum, 147 cases of gum arabic, 148 elephants teeth, 1 case of gum benjamin, 10 bags of croton seed, 90 cases of China indigo, 835 cases of camphor, 51 cases of raw camphor, 4 cases of shawls, 291 cases of 1 case shells, 22 cases of myrrh, 200 cases of animi, 6 cases of kino, 16 cases of cardamoms, 116 cases of

TARIFF AND CUSTOMS' LAW OF THE UNITED STATES, PA  
SESSIONS OF THE TWENTY-SEVENTH CONGRE

1st.—On coarse wool unmanufactured, the value whereof at the time of exportation to the United States, shall be seven cents, or under per pound of five per centum *ad valorem*; and on all other unmanufactured wool, the value whereof at the time of exportation to the United States, shall be three cents per pound, and thirty per centum *ad valorem*: Provided, That if different qualities of the same kind or sort, is imported in the same bale or package, the aggregate value of the contents of the bale, bag, or package, shall be appraised at a rate exceeding seven cents per pound, it shall be charged with such appraisal: Provided further, That when wool of different qualities or sorts, is imported in the same bale, bag, or package, the contents of the bale shall be appraised at the value of the finest or most valuable kind or sort, accordingly: Provided further, That if bales of different qualities or sorts, are imported at the same price, the value of the whole shall be appraised accordingly: Provided further, That if any wool be imported in the same bale or package, containing material or impurities, other than those naturally belonging to the fleece, the value shall be appraised at seven cents per pound or under, the appraisers shall appraise the same, in their opinion, it would have cost had it not been mixed with such impurities: Provided further, That if any wool be imported in the same bale or package, containing material or impurities, other than those naturally belonging to the fleece, the value shall be charged thereon in conformity to such appraisal: Provided further, That if any wool be imported in the same bale or package, containing material or impurities, other than those naturally belonging to the fleece, the value shall be estimated as to weight and value as other wool.

SECTIONS II., V., VI., VIII., and IX., enumerate the various duties, payable on the several articles in the annexed table.

SECTION III.—And be it further enacted, That, from and after the passage of this act, there shall be levied, collected, and paid on the importation of the articles hereinafter mentioned, the following duties, that is to say:—

1st.—On all manufactures of silk not otherwise specified, except bolting cloths, two dollars and fifty cents per pound of sixteen ounces; on silk bolting cloths, twenty per centum *ad valorem*. Provided, That if any silk manufacture shall be mixed with gold or silver, or other metal, it shall pay a duty of thirty per centum *ad valorem*.

SECTION III., clause 3rd.—On cotton bagging, four cents per square yard or any other manufacture not otherwise specified, suitable for the uses to which cotton bagging is applied, whether composed in whole or in part of hemp or flax, or any other material, or imported under the designation of gunny cloth, or any other appellation, and without regard to the weight or width, a duty of five cents per square yard.

SECTION IV.—And be it further enacted, That, from and after the passage of this act, there shall be levied, collected, and paid, on the importation of the articles hereinafter mentioned, the following duties, that is to say:—

1st.—On iron in bars or bolts, not manufactured in whole or in part by rolling, seventeen dollars per ton; on bar or bolt iron, made wholly or in part by rolling, twenty-five dollars per ton. Provided, That all iron in slabs, blooms, loops, or other form, less finished than iron in bars or bolts, and more advanced than pig iron, except castings, shall be rated as iron in bars or bolt, and pay a duty accordingly. Provided also, That iron, imported prior to the 3rd day of March, 1843, in bars or otherwise, for railways and inclined planes, shall be entitled to the benefits of the provisions of existing laws, exempting it from the payment of duty on proof of its having been actually and permanently laid down for use on any railway or inclined plane prior to the 3rd day of March, 1843, and all such iron imported from and after the date aforesaid, shall be subject to pay the duty on rolled iron.

SECTION VII.—And be it further enacted, That, from and after the day and year aforesaid, there shall be levied, collected, and paid, on the importation of the articles hereinafter mentioned, the following rates of duty, that is to say:—

2nd.—On all books printed in the English language, or of which English forms the text, when bound, thirty cents per pound, when in sheets or boards, twenty cents per pound. Provided, That whenever the importer shall prove, to the satisfaction of the collector, when the goods are entered, that any such book has been printed and published abroad more than one year, and not republished in this country, or has been printed and published abroad more than five years before such importation, then, and in such case, the said books shall be admitted at one-half of the above rate of duties. Provided, That the said terms of one year and five years, shall in no case commence, or be computed at and from a day before the passing of this act; on all books printed in Latin or Greek, or in which either language forms the text, when bound, fifteen cents per pound; when unbound, thirteen cents per pound; on all books printed in Hebrew, or of which that language forms the text, when bound, ten cents per pound, and when unbound, eight cents per pound. Provided, That all books printed in foreign languages, Latin, Greek, and Hebrew excepted, shall pay a duty of five cents per volume, when bound or in boards, and when in sheets or pamphlets, fifteen cents per pound; and editions of works in the Greek, Latin, Hebrew, or English languages, which have been printed forty years prior to the date of importation, shall pay a duty of five cents per volume; and all reports of legislative committees, appointed under foreign governments, shall pay a duty of five cents per volume; on polyglots, lexicons, and dictionaries, five cents per pound; on books of engravings or plates, with or without letterpress, whether bound or unbound, and on maps and charts, twenty per centum *ad valorem*.

SECTION X.—And be it further enacted, That on all articles not herein enumerated or provided for, there shall be levied, collected, and paid a duty of twenty per centum *ad valorem*.

SECTION XI.—And be it further enacted, That an addition of ten per centum shall be made to the several rates of duties by this act imposed, in respect to all goods, wares, and merchandise, on the importation of which, in American or foreign vessels, a specific discrimination between them is not herein made, which, from and after the time when this act shall take effect and go into operation, shall be imported in ships or vessels not of the United States; and that a further addition of ten per centum shall be made to the several rates of duties imposed by this act on all goods, wares, and merchandise, which shall be imported from any port or place east of the Cape of Good Hope, in foreign vessels. Provided, That these additional duties shall not apply to goods, wares, or merchandise, which shall be imported after the day that this act goes into operation, in ships or vessels not of the United States, entitled by treaty or by any act or acts of Congress, to be entered in the ports of the United States, on the payment of the same duties as shall then be paid on goods, wares, or merchandise, imported in ships or vessels of the United States.

SECTION XII.—And be it further enacted, That on and after the day this act goes into operation, the duties on all imported goods, wares, or merchandise, shall be paid in cash: Provided, That in all

cases of failure or neglect to pay the duties, on completion of the entry merchandise, shall be taken possession of by the collector, and deposited to be kept with due and reasonable care, at the charge and risk of the owner or agent; and if any such goods remain in public store beyond sixty days, goods imported from beyond the Cape of Good Hope, remaining for without payment of the duties thereon, then said goods, wares, and merchandise thereof as may be deemed necessary to discharge the duties, shall be appraised by the collector, at public auction, on due public notice thereof being first given at the time prescribed by a general regulation of the Treasury department; and tinct printed catalogues, descriptive of said goods, with the appraised value distributed among the persons at said sale; and a reasonable opportunity of such sale, to persons desirous of purchasing, to inspect the quality of such goods of said sales, after deducting the usual rate of storage at the port in other charges and expenses, including interest on the duties from the six per centum per annum, shall be applied to the payment of duties; and the remaining, over and above the full amount of duties, charges, and expenses as well as such quantities of any goods, wares, or merchandise as may be required for purposes before-mentioned, shall be delivered, and the money paid to the owner, importer, consignee, or agent, and proper receipts taken for the same.

And provided, That if no claim be made by such owner, importer, or consignee, a portion of the goods which may remain in the hands of the collector, shall be forthwith returned to the public stores, there to be kept at the disposal of the owner, importer, consignee, or agent, until claimed or sold for storage; and the proceeds of the sale for duties remaining unclaimed for the space of ten days after payment of duties and all expenses aforesaid, at the expiration of which time the collector into the Treasury, in the manner provided for in the case of unclaimed merchandise in the succeeding section of this act: And provided further, That when an owner or consignee, they shall be sold forthwith.

SECTION XIII.—And be it further enacted, That, previous to the sale of the said collector shall procure an inventory and appraisement thereof of the goods on oath or affirmation, by two or more respectable merchants, before the collector, with him; and said collector shall afterwards cause said goods to be sold in the manner provided for in this act, and, after retaining the duties thereon and appraisement, and interest and charges aforesaid, shall pay the overplus to the Treasury of the United States, there to remain for the use of the collector, upon the due proof of his, her, or their property, be entitled to receive the same; and the collector shall transmit, with the said overplus, a copy of the account of sales, specifying the marks, numbers, and descriptions of the contents, the name of the vessel and master in which and of the port from which the goods were imported, and the time when, and the name of the person or persons to whom the goods were consigned in the manifest; and the receipt or certificate of the collector or person having the charge or command of any ship or vessel in which the said merchandise were imported, from all claim of the owner or owners of the same; and much of the fifty-sixth section of the general collection law of 2nd of March 1843, for the storage of unclaimed merchandise, as conflicts with the provisions of this act is hereby repealed: Provided also, That when goods are of a perishable nature, they shall be sold forthwith.

SECTION XIV.—And be it further enacted, That on and after the 1st day of January 1843, there shall be allowed a drawback on foreign sugar refined in the United States, from, equal in amount to the duty paid on foreign sugar from which it was refined; and ascertained under such regulations as shall be prescribed by the Secretary of the Treasury; and on spirits distilled from foreign molasses, a drawback of one per centum per gallon, when it shall be reduced one per cent per gallon on the 1st day of January 1843, when it shall be reduced one per cent per gallon thereafter, the said drawback shall be reduced one per cent per gallon; and shall be wholly discontinued: Provided, That this act shall not alter the force of any law regulating the exportation of sugar refined, or spirits distilled from foreign molasses, except as to the rates of duties and drawbacks.

SECTION XV.—And be it further enacted, That in the case of all goods imported on and after the day this act goes into operation, and entitled to a drawback, no drawback of the duties shall be allowed on the same, unless the goods shall be exported from the United States within three years after the date of importation; nor shall the additional rate of duty levied by this act on goods imported in foreign vessels, be refunded in case of re-exportation: And one-half per centum on the amount of all drawbacks allowed, except or

be retained, for the use of the United States, by the collectors paying such drawbacks respectively : and in the case of foreign refined sugars, ten per centum shall be so retained.

SECTION XVI.—And be it further enacted, That in all cases where there is or shall be imposed any *ad valorem* rate of duty on any goods, wares, or merchandise, imported into the United States, and in all cases where the duty imposed shall by law be regulated by, or directed to be estimated or based upon, the value of the square yard, or of any specified quantity or parcel of such goods, wares, or merchandise, it shall be the duty of the collector, within whose district the same shall be imported or entered, to cause the actual market value or wholesale price thereof, at the time when purchased, in the principal markets of the country from which the same shall have been imported into the United States, or of the yards, parcels, or quantities, as the case may be, to be appraised, estimated, and ascertained, and to such value or price, to be ascertained in the manner provided in this act, shall be added all costs and charges, except insurance, including in every case charges for commission at the usual rates, as the true value at the port where the same may be entered, upon which duties shall be assessed. And it shall, in every such case, be the duty of the appraisers of the United States, and every of them, and every person who shall act as such appraiser, or of the collector and naval officer, as the case may be, by all the reasonable ways and means in his or their power, to ascertain, estimate, and appraise the true and actual market value and wholesale price, any invoice or affidavit to the contrary notwithstanding, of the said goods, wares, and merchandise, at the time purchased, and in the principal markets of the country whence the same shall have been imported into the United States, and the number of such yards, parcels, or quantities, and such actual market value or wholesale price of every of them as the case may require ; and all such goods, wares, or merchandise, being manufactured of wool, or whereof wool shall be a component part, which shall be imported into the United States in an unfinished condition, shall, in every such appraisal, be taken, deemed, and estimated to have been, at the time purchased, and place whence the same were imported into the United States, of as great value as if the same had been entirely finished : Provided, That in all cases where goods, wares, and merchandise, subject to *ad valorem* duty, or on which the duties are to be levied upon on the value of the square yard, and in all cases where any specific quantity or parcel of such goods, wares, and merchandise, shall have been imported into the United States from a country in which the same have not been manufactured or produced, the foreign value shall be appraised and estimated according to the current market value or wholesale price of similar articles at the principal markets of the country of production or manufacture, at the period of the exportation of said goods, wares, and merchandise, to the United States.

XVII.—And be it further enacted, That it shall be lawful for the appraisers, or the collector and naval officer, as the case may be, to call before them and examine, upon oath or affirmation, any owner, importer, consignee, or other person touching any matter or thing which they may deem material in ascertaining the true market value or wholesale price of any merchandise imported, and to require the production, on oath or affirmation, to the collector or to any permanent appraiser, of any letters, accounts, or invoices, in his possession, relating to the same, for which purpose they are hereby respectively authorised to administer oaths and affirmations ; and if any person so called shall neglect or refuse to attend, or shall decline to answer, or shall, if required, refuse to answer in writing any interrogatories, and subscribe his name to his deposition, or to produce such papers, when so required, he shall forfeit and pay to the United States the sum of 100 dollars ; and if such person be the owner, importer, or consignee, the appraisement which the said appraisers, or collector and naval officer, where there are no legal appraisers, may make of the goods, wares, and merchandise, shall be final and conclusive, any act to the contrary notwithstanding ; and any person who shall wilfully and corruptly swear or affirm falsely on such examination, shall be deemed guilty of perjury ; and if he be the owner, importer, or consignee, the merchandise shall be forfeited : and all testimony in writing or depositions taken by virtue of this section, shall be filed in the collector's office, and preserved for future use of reference, or be transmitted to the secretary of the Treasury, when he shall require the same : Provided, That if the importer, owner, agent, or consignee, of any such goods, shall be dissatisfied with the appraisement, and shall have complied with the foregoing requisitions, he may forthwith give notice to the collector, in writing, of such dissatisfaction ; on the receipt of which, the collector shall select two discreet and experienced merchants, citizens of the United States, familiar with the character and value of the goods in question, to examine and appraise the same, agreeably to the foregoing provisions ; and if they shall disagree, the collector shall decide between them ; and the appraisement thus determined shall be final, and deemed and taken to be the true value of said goods, and the duties shall be levied thereon accordingly, any act of Congress to the contrary notwithstanding : Provided also, That in all cases where the actual value to be appraised, estimated, and ascertained as herein before stated, of any goods, wares, and merchandise, imported into the United States, and subject to any *ad valorem* duty, or whereon the duty is regulated by or directed to be imposed or levied on the value of the square yard, or other parcel or quantity thereof shall exceed by ten per centum or more the invoice value, then, in addition to the duty imposed by law on the same, there shall be

levied and collected on the same goods, wares, and merchandise, fifty per centum on the same, when fairly invoiced.

XVIII.—And be it further enacted, That the several collectors be, and are, authorized, under such regulations as may be prescribed by the secretary of the Treasury, they shall deem it necessary to protect and secure the revenue of the United States, and under-valuation, and the same is practicable, to take the amount of such article bearing an *ad valorem* rate of duty, in the article itself, according to the rate per centum of the duty on said article; and such goods, so taken, shall be sold at public auction, within twenty days from the time of taking them, as is prescribed in this act, and place the proceeds arising from such sale in the Treasury of the United States: Provided, That the collector or appraiser shall not be allowed to take, or to be concerned in the taking and disposing of said goods, and paying the proceeds thereof in any manner now allowed by law.

XIX.—And be it further enacted, That if any person shall knowingly defraud the revenue of the United States, smuggle or clandestinely import into the United States, any goods, wares, or merchandise, subject to duty by law, and not so declared, or voiced, without paying or accounting for the duty, or shall make out, through the Custom-house, any false, forged, or fraudulent invoice, or their aiders and abettors, shall be deemed guilty of a misdemeanor, and shall be fined in any sum not exceeding 5000 dollars, or imprisoned for not exceeding two years, or both, at the discretion of the court.

XX.—And be it further enacted, That there shall be levied, collected, and paid, on every non-enumerated article which bears a similitude, either in material or use to which it may be applied, to any enumerated article chargeable with duty which is levied and charged on the enumerated article which it resembles in the particulars before-mentioned; and if any non-enumerated article equal in value to any enumerated articles, on which different rates of duty are chargeable, shall be imported, and paid, on such non-enumerated article, the same rate of duty as is levied and charged on which it resembles paying the highest duty; and on all articles manufactured in the United States, the duty shall be assessed at the highest rates at which any such article may be chargeable.

XXI.—And be it further enacted, That the collector shall designate one package of every invoice, and one package at least of every ten packages of merchandise, and a greater number should be or either of the appraisers reported into such port, to be opened, examined, and appraised, and the packages so designated to the public stores for examination; and if any appraiser shall contain any article not specified in the invoice, and they shall be of opinion that such article was omitted in the invoice with fraudulent intent, the shipper, owner, or agent, the contents of the entire package in which such article was so omitted shall be forfeited; but if said appraisers shall be of opinion that no such fraud was intended, the value of such article shall be added to the entry, and the duties thereon shall be delivered to the importer, agent, or consignee: Provided, That no fraud was intended: Provided further, That if, on the examination of the packages of goods, a deficiency of any article shall be found, on examination the same shall be certified to the collector on the invoice, and an allowance made for the same duties.

XXII.—And be it further enacted, That where goods, wares, and merchandise are imported at ports where there are no appraisers, the mode hereinbefore prescribed for the valuation thereof shall be carefully observed by the revenue officers, to insure the proper estimating and collection of duties.

XXIII.—And be it further enacted, That it shall be the duty of the Secretary of the Treasury, from time to time, to establish such rules and regulations, not inconsistent with the laws of the United States, to secure a just, faithful, and impartial appraisal of all goods, wares, and merchandise, as aforesaid, imported into the United States, and just and proper market value, or wholesale prices thereof, and of the square yards, parcellable quantities, or such actual market value wholesale price of each article.

XXIV.—And be it further enacted, That it shall be the duty of all officers of the customs, to execute and carry into effect all instructions of the Secretary of the Treasury relative to the execution of the revenue laws; and in case any difficulty shall arise in the construction or meaning of any part of such revenue laws, the decision of the Secretary shall be conclusive and binding upon all such collectors and officers of the customs.

XXV.—And be it further enacted, That nothing in this act con-

shipped in any vessel bound to any port of the United States, actually having left her last port of lading eastward of the Cape of Good Hope or beyond Cape Horn, prior to the 1st day of September, 1842: and all legal provisions and regulations existing immediately before the 30th day of June, 1842, shall be applied to importations which may be made in vessels which have left such last port of lading eastward of the Cape of Good Hope or Cape Horn, prior to said 1st day of September, 1842.

XXVI.—And be it further enacted, That laws existing on the 1st day of June, 1842, shall extend to and be in force for the collection of the duties imposed by this act, on goods, wares, and merchandise, imported into the United States, and for the recovery, collection, distribution, and remission of all fines, penalties, and forfeitures, and for the allowance of the drawbacks by this act authorised, as fully and effectually as if every regulation, restriction, penalty, forfeiture, provision, clause, matter, and thing, in the said laws contained, had been inserted in and re-enacted by this act. And that all provisions of any former law inconsistent with this act, shall be, and the same are hereby repealed.

XXVII.—And be it further enacted, That it shall be the duty of the secretary of the Treasury, annually, to ascertain whether, for the year ending on the 30th of June next preceding, the duty on any articles has exceeded thirty-five per centum *ad valorem* on the average wholesale market value of such articles, in the several ports of the United States for the preceding year; and, if so, he shall report a tabular statement of such articles and excess of duty to Congress at the commencement of the next annual session thereof, with such observations and recommendations as he may deem necessary for the improvement of the revenue.

XXVIII.—And be it further enacted, That the importation of all indecent and obscene prints, paintings, lithographs, engravings, and transparencies, is hereby prohibited; and no invoice of packages whatever, or any part thereof, shall be admitted to entry, in which any such articles are contained; and all invoices and packages, whereof any such article shall compose a part, are hereby declared to be liable to be proceeded against, seized and forfeited, by due course of law, and the said articles shall be forthwith destroyed.

XXIX.—And be it further enacted, That wherever the word “ton” is used in this act, in reference to weight, it shall be deemed and taken to be twenty hundred weight, each hundred weight being 112lbs. avoirdupois.

XXX.—And be it further enacted, That so long as the distribution of the net proceeds of the sales of the public lands, directed to be made among the several states, territories, and district of Columbia, by the act entitled “An Act to appropriate the Proceeds of the Sales of the Public Lands, and to grant pre-emption Rights,” shall be and remains suspended by virtue of this act, and of the proviso of the sixth section of the act aforesaid, the ten per centum of the said proceeds directed to be paid by the said act to the several states of Ohio, Indiana, Illinois, Alabama, Missouri, Mississippi, Louisiana, Arkansas, and Michigan, shall also be and remain suspended.

JOHN WHITE, Speaker of the House of Representatives.

WILLIE P. MANGUM, President of the Senate, *pro tempore*.

Approved August 30th, 1842.

JOHN TYLER.

We subjoin the *CI-DEVANT* TARIFF OF TEXAS, which is of great simplicity, but most *unsound* and *pernicious* in its high rates, generally as high as that of the Tariff of the United States, and extend over Texas. As far as duties are in question, no one can compare Texas with the great American republic.

IMPORT Duties as fixed by the Fifth Congress of Texas, and which were in force after the 1st of April, 1841.

AN ACT to authorise the Importation of Brandy in Casks than Fifteen Gallons, and the Exportation of the same without Drawback of the Duties.

Be it enacted by the Senate and House of Representatives of the United States in Congress assembled, That from and after the passage of this act, be

the United States in casks of a capacity not less than fifteen gallons, any thing in any law to the contrary notwithstanding: Provided, however, that all the provisions of existing laws, not inconsistent with this act, relating to the importation of foreign spirits, be complied with: And provided further, That all brandy imported in casks, of a capacity less than ninety gallons, shall be deposited, at the expense and risk of the importer, in such public or other warehouses, as shall be designated by the collector or surveyor for the port, where the same shall be landed; and shall be removed therefrom in the manner prescribed by an act entitled, "An Act providing for the Deposit of Wines and distilled Spirits in Public Warehouses, and for other Purposes."

II.—Be it further enacted, That brandy imported in casks of a capacity not less than fifteen gallons, may be exported for the benefit of a drawback of the duties which shall have been paid thereon; and the exporter or exporters of brandy so imported, shall be entitled to receive a debenture or debentures, for the amount of such drawback, agreeably to the existing laws; and all acts now in force, regulating the exportation of spirits, and the allowance and payment of drawbacks and debentures, shall be deemed applicable to brandy, the importation of which is permitted by this act.

[Approved, 2nd of March, 1827.]

No goods, wares, or merchandise, subject to duty, can be imported into the United States, on the seaboard, in vessels of less than thirty tons' burden, under the penalty of the forfeiture of vessel and cargo; nor can a drawback of any duties be obtained on exportation except by sea; and in vessels of not less than thirty tons' burden—Act of the 2nd of March, 1799, Section XCII.

Drawback not allowed on goods exported to any place immediately adjoining the United States, except to places westward or southward of Louisiana, and to the north-west coast of America; nor in any case, when exported in a vessel of less than thirty tons' burden.—Act of the 2nd of March, 1799, Sections LXXXV. and XCII.; and Act of the 5th of January, 1805, Section II.

No refined lump or loaf sugar can be imported into the United States, except in ships or vessels of at least 120 tons' burden, and in packages containing at least 600 lbs., under the penalty of forfeiting the same, together with the ship or vessel.—Act of the 2nd of March, 1799, Section CIII.

To be entitled to drawback, the duties on the importation of the goods exported, must have been, at least, fifty dollars by one vessel, at the same time, and by the same person, and the merchandise be, at the time of exportation, in the same package, and same condition, including wrapper and original mark and number, as when imported.—Act of the 22nd of May, 1824.

#### DRAWBACK.

XIV.—And be it further enacted, That on and after the day this law goes into effect, there shall be allowed a drawback on foreign sugar refined in the United States, and exported therefrom, equal in amount to the duty paid on the foreign sugar from which it shall be manufactured, to be ascertained under such regulations as shall be prescribed by the secretary of the treasury, and no more, and on spirits distilled from foreign molasses a drawback of five cents per gallon, till the 1st day of January, 1843, when it shall be reduced one cent per gallon; and annually, on the 1st day of January thereafter, the said drawback shall be reduced one cent per gallon, until the same shall be wholly discontinued. Provided, That this act shall not alter or repeal any law now in force regulating the exportation of sugar refined or spirits distilled from molasses in the United States, except as to the rates of duties and drawbacks.

XV.—And be it further enacted, That in the case of all goods, wares, and merchandise, imported on and after the day this act goes into operation, and entitled to debenture under existing laws, no drawback of the duties shall be allowed on the same, unless said goods, wares, or merchandise, shall be exported from the United States within three years from the date of importation of the same, nor shall the additional rate of duty levied by this act on goods, wares, and merchandise, imported in foreign vessels, be refunded in cases of re-exportation: Provided, That two and one-half per centum on the amount of all drawbacks allowed, except on foreign refined sugars, shall be retained for the use of the United States, by the collectors paying such drawbacks respectively; and in the case of foreign refined sugars, ten per centum shall be so retained.—Act of the 30th of August, 1842.

No distilled spirits, except arrack, brandy in casks of not less capacity than fifteen gallons, and sweet cordial, can be imported in casks or vessels of less capacity than ninety gallons, wine measure; nor in casks which have been marked pursuant to any law of the United States, on pain of forfeiture of the same, together with the ship or vessel in which they were imported.—Act of the 2nd of March, 1799, Section CIII.

In all cases where there are more goods found on board a vessel than the master thereof has reported in his manifest, he shall, with the consent of the officers of the customs, make a post entry for the same, and pay two dollars therefore; and for every disagreement between his manifest and cargo, he is liable to a fine of 500 dollars.—Act of the 2nd of March, 1799, Section LVII.

Drawback is not allowed on the exportation of goods which shall have been imported in foreign vessels, from any of the dominions, colonies, or possessions of any foreign power, with which the

vessels of the United States are not permitted directly to trade.—A Section IV.

No allowance of drawback on the exportation of iron cables, or playing cards, cordage if less than five tons, foreign dried and pickled sions, nor on sail duck if less than fifty bolts.—Act of the 14th of Ju

Within twenty days after the clearance of a vessel, the exporter swear to the export entry, and give a bond that they shall not be land the limits of the United States, or forfeit the drawback.—Act of the sion of time to twenty days.—Act of the 1st of March, 1823.

Bounty is allowed on the exportation of pickled fish of the fisher and packed solely with foreign salt, on which the duty shall have b March, 1799, Section LXXXIII.

All goods, on examination by the appraisers, not corresponding are liable to forfeiture.

The number of bushels of wheat is to be ascertained by actual bushel, and not by weight.

#### REGISTER ACT.

Every owner of a vessel, residing within the limits of the United the register within ninety days after its being granted, or it becomes pays foreign tonnage and duty.

For duty of appraisers, &c., see Section XVII., Act of the 30th Duties to be paid in cash.—See Section XII., Act of the 30th of

## STATUTE LAWS RELATING TO VESSELS.

The laws relating to the registry of vessels, the transfer of vessels by bill of sale, the enrolling and licensing of vessels for the coasting trade and fisheries, and the bounties payable to vessels employed in the cod-fishery, are of immense importance to those engaged in mercantile pursuits.

but they are to be found only by an examination of the numerous States, or in the voluminous digests of the same.

*Registered Vessels.*—Vessels built in the United States, and wholly vessels captured in war by such citizens, and condemned as prizes; forfeited for breach of the laws of the United States being wholly owned by others may be registered. No vessel is entitled to registry, or if registered if owned in whole, or in part, by any citizen usually residing in a foreign residence, unless he be a consul of the United States, or an agent for, or of trade or copartnership, consisting of citizens of, and actually carrying on business in the United States.

A registered vessel which by sale becomes the property of a foreigner, or a new register, notwithstanding she may afterwards become American, is entitled to registry, or its benefits, owned by a non-resident naturalized citizen, or for more than one year in the country from which he originated, or for more than one year in the country, unless he be a consul, or other public agent of the United States.

A vessel shall be deemed to belong to the port at or near which the master and the name of the vessel, and of the place to which she belongs, shall be painted on a black ground, with white letters of not less than three inches in height. The master carpenter under whose direction the vessel is built, must be provided with a certificate sufficient to remove a new vessel from one district to another adjoining state, where the owner actually resides, provided it be with him.

In order to the registry of a vessel, the owner, or one of the owners, or the property of the vessel, her name, burden, time when and place where she was built, is no foreigner interested, directly or indirectly, in such vessel, or that the master is a citizen of the United States. The oath required respects only the legal ownership of the property; and does not include any equitable interests vested in citizens of the United States, but only in citizens of any foreign prince or state is directly or indirectly interested therein. An agent or attorney may make oath, as agent, in case of a vessel more than fifty miles distant from the district to which, by virtue of purchase, it is transferred.

Steamboats may be registered or licensed in the name of the president of an incorporated company, without designating the names of the persons composing the company, or part of such vessel can be owned by any foreigner. Vessels employed in foreign trade, owned by an incorporated company, may be registered as above, so long as they are employed therein.

The issuing of certificates of record applies only to vessels built in the United States, and does not extend to vessels which, having been built in a foreign country, are now in the United States.

Any vessel entitled to registry, being in a port other than the one to which she belongs, may be registered at the place where she may be at the time. The register shall be taken before the collector of the place to which the vessel belongs, or at the place in which she may be. When such vessel shall arrive within the district, the register so obtained shall be delivered up to be cancelled, and a new one issued in lieu thereof.

When a registered vessel is transferred to a foreigner, such transfer shall be delivered up to a collector of a district, the certificate of registry, and the transfer of property; and if the transfer shall take place when the vessel is on the sea, the master of the vessel shall within eight days after his arrival in the United States, deliver up the register to the collector of such district. It is the register after it is cancelled; it is deposited in the register's office, as legal evidence.

If a master of a registered vessel be changed, the name of the new register, upon his making oath that he is a citizen of the United States, shall be fraudulently or knowingly used, for any vessel not entitled to the benefits thereof, she, with her tackle, &c., shall be forfeited to the United States. A vessel about to proceed on a foreign voyage, must surrender her register, and be duly registered, or she, together with the goods imported thereon, shall be forfeited. In case of the loss of a register, the master of the vessel shall obtain a new one.

*Of the Transfer of Vessels.*—When any registered vessel shall, in whole or in part, be transferred to a citizen, or altered in form or burden, by being lengthened or built on, or by being altered in rigging, she shall be registered anew, and shall be a vessel of the United States.

If a registered vessel shall be sold in part to resident citizens of the United States, without a bill of sale reciting the register, and without being then

liable with her cargo for higher duties than are payable by vessels of the United States. By the general maritime law, a bill of sale is necessary to pass the title of the ship. The inaccurate recital of the certificate of registry in the bill of sale, does not avoid the sale, but the vessel is thereby deprived of her American privileges. If a sea vessel be assigned to a foreigner, the effect is the same; but if it be a coaster, the sale is not thereby invalidated, but the vessel is subject to forfeiture. A regular bill of sale of a vessel at sea, will transfer the property. And, in general, where there can be no manual delivery, there should be a delivery of something as an *indicium* or token. A bill of sale is the proper title to which the maritime courts look, it is the universal instrument of transfer of vessels; it is made absolutely necessary by statute.

**Enrolled Vessels.**—Enrolled vessels are those over twenty tons' burden, employed in the coasting trade and fisheries; and are licensed annually for the employment or business authorised by the tenour of the licence. Vessels enrolled and licensed, bound on a foreign voyage, may be registered; and enrolled vessels, being in a port other than the one to which she belongs, on the expiration of the licence, may obtain temporary registry. Vessels under twenty tons' burden may be licensed for the coasting trade or fisheries. A vessel licensed for any employment, may surrender it at any time within the period for which it was issued.

All licences must be renewed within three days after the expiration thereof, if the vessel be within the district to which she belongs; if on a voyage at the time of expiration, within three days after her first arrival; if sold, in whole, or in part, the licence is vacated. Should a licence be lost or destroyed, a new one may be obtained, on the oath of the master to the loss, &c. On a transfer of an enrolled vessel, a new enrolment must be obtained, the requisites for obtaining which are similar to those for registered vessels.

**Coasting Trade.**—The United States is divided into three great districts: the first, between the eastern limits of the United States and the southern limits of Georgia; the second, to include all districts, &c., between the river Perdido and the western limits of the United States; and the third, all the ports, &c., between the southern limits of Georgia and the river Perdido.

Every vessel destined from a district in one state to a district in the same, or an adjoining state, with foreign merchandise in packages as imported, the value of which exceeds 400 dollars, or with foreign goods in original packages or otherwise, the aggregate value of which exceeds 800 dollars, must obtain a clearance. On the arrival of every such vessel at the port of destination, the master must enter the vessel and obtain a permit to unlade his cargo.

Vessels sailing with a coasting licence, laden with goods wholly of the produce or manufacture of the United States, are not required to clear, if bound from one to another port within either of the three great districts.

All registered vessels engaged in the coasting trade, are required to clear in going from one district to any other district, and also on their arrival in the other district to enter under similar regulations to those vessels under a licence. Since the act of 1828, chap. 109, the mackarel fishery cannot be lawfully carried on under a licence for the cod fishery.

The 32nd section of the act of February 18, 1793, forfeits a vessel licensed for the fisheries, if engaged in a business, of whatever nature, and with whatever object, which is not expressly authorised by the tenour of the licence. But vessels licensed for the mackarel fishery are not liable to the forfeiture imposed by the 5th and 32nd sections of the act of February 18, 1793, in consequence of any such vessel whilst so licensed having been engaged in catching cod or other fish.—But the owner of such vessel may not receive the bounty allowed to vessels in the cod fishery. A vessel to be entitled to the bounty must be actually employed at sea, in the cod fisheries, a certain specified time, and must dry cure the fish caught.

**Fishing Bounties.**—The fishing season is accounted from the last day of February to the last day of November; and the following allowances are paid on the last day of December, annually, to the owner or his agent, of each vessel that shall be duly licensed and qualified for the cod fisheries, and that shall have been employed four months of the fishing season, viz.:—To every vessel of more than five tons and not exceeding thirty tons' burden, three dollars fifty cents per ton; above thirty tons' burden, four dollars per ton; above thirty tons, with a crew of not less than ten persons, and employed three months and a half, three dollars and fifty cents per ton. The bounty on any one vessel cannot exceed 360 dollars. Vessels of more than five and less than twenty tons, must catch and land twelve quintals of fish per ton, during the season.

The skipper of each fishing vessel must make an agreement with every fisherman before proceeding on a voyage. By paying monthly wages in money in lieu of dividing the fish, or the proceeds of the fishing voyage, in the proportions provided for by law, the agreement is violated, and the bounty is forfeited. The oath of the master, at the time the vessel has been actually employed in the fisheries, is required by an act of July 29, 1813, sec. 6.

Fishing vessels wrecked may obtain the bounty in certain cases, by the act of 1824, chap. 152. Fishing vessels may obtain a licence to touch and trade at a foreign port, under the act of February 18, 1793.—But the mere proceeding to a foreign port, if within the customary range of a fishing voyage, is not proceeding on a foreign voyage, within the meaning of the act. The bounties granted

by law, are paid on such vessels only, the officers and three-fourths of the proved citizens of the United States.

The laws relating to the enrolling and licensing of vessels, as well as registering and recording of them, require, that when a vessel is sold and in part, her papers shall be given up to be cancelled, and that she shall be a vessel employed in the coasting trade, cod fishery, or mackarel fishery, one to which she belongs, whose licence has expired, she is required to obtain a licence, a "temporary register," to enable the vessel to return to the port to which she belongs, and is destined for a foreign port, should that port be in an adjoining district, there again to be enrolled as before the temporary register was granted: and when an enrolment is made, she is again subject to the requirements of the law. This series of changes may be entirely obviated, and the whole business of enrolling and licensing vessels arranged in a simple and concise manner, by the law requiring all vessels to be registered permanently, whether engaged in the coasting trade or fisheries, according to the form now in use for vessels bound on a foreign voyage, or parts or proportions owned by each individual, ought also to be expressed when a partial transfer of property is made, it should be endorsed on the register, and when there is an hypothecation, by bottomry or otherwise, it should be so, and thus make the register the real evidence of ownership. According to the present law, volumes of records are required to be kept, at great labour and expense, and frequent and partial changes of property in vessels, and their changes of employment.

After a vessel is permanently registered, and is to be employed in the coasting trade, a licence should be given for that particular employment, to be renewed when the vessel is taken from either of those employments, to be put into foreign service, or be surrendered, and a clearance granted to proceed on the voyage, under the register.

Copies of all registers and enrolments issued by the existing laws, and a duplicate of each made for the records of the treasury, and a duplicate of each made for the records of the customs, and, consequently, when a vessel is registered, enrolled, and licensed, and again licensed, within a year, triplicate copies at each change are rendered necessary, the labour at the custom-houses would be greatly reduced; the record of the real *bonâ fide* ownership of vessels; and the mercantile community would be relieved from the onerous requirements imposed by every partial transfer of their property, incident to their frequent changes of employment.

The acts upon which the existing system is based, are those of Dec 18, 1793; March 2, June 27, 1797; March 2, 1803; March 27, 1804; and February 11, 1830.

The following circular instructions to collectors of the customs, Department, April 10, 1845, are explanatory of the act of March 3, 1845.

Herewith you will receive an act entitled "An act allowing drawback on goods exported in the original packages to Chihuahua and Santa Fe, in the North American provinces adjoining the United States," approved the 10th of March, 1845, accompanied with forms and instructions for carrying the same into execution.

The first six sections of the act apply to the exportation of merchandise, "as imported," to Chihuahua, in Mexico, or Santa Fe, in New Mexico, by the Arkansas river, through Van Buren, or by the route of Red river, through Independence, or by the route of the Missouri river, through Independence. Consequently, for goods exported or conveyed to the places in Mexico or New Mexico, mentioned in the act, will not be entitled to a drawback of the duties thereon. It is to be remarked, that the exportation of merchandise by the routes and to the places mentioned in the act, can only be made from the original port of importation.

In pursuance of the authority vested in the secretary of the treasury, the act, the following rules, regulations, and forms, are prescribed, and are to be observed.

First.—In regard to the exportation of merchandise to Chihuahua and Santa Fe.

On first giving twenty-four hours' notice at the custom-house, of the intended exportation, the importer must make due entry, and for that purpose must produce the invoice of the goods, in conformity with the section of the act. Said entry must recite the invoice in detail; and, in the description of the merchandise, whence and by whom imported, the time of importation, with the original invoice value of the goods; and

and the route by which the merchandise is to be transported. The entry must, in all cases, be verified by the oath or affirmation of the person making the same, together with the oath or affirmation of the first importer, with that of any person through whose hands the merchandise may have passed, declaring the same to be in the original package or packages, and that the duties have been paid or secured. Inspection of the packages should also be carefully made by a proper officer of the customs, at the time of making the entry. The bond required by the fifth section of the act must be given by the exporter.

In consideration of the large inland transportation, and the consequent risk of injury, and defacing the marks on the packages, thereby rendering it difficult to identify them, it is deemed proper, for the more effectual security of the revenue, to require that each package shall be enclosed in a strong wooden box or covering, on which the same marks and numbers are to be placed as those on the inner package. The inner package is to be secured with a strong cord or rope, with the custom-house seal attached.

Forms of entry, invoice certificates, and oaths, are herewith transmitted, marked from A to D, inclusive.

Secondly.—The remaining sections of the act apply to the exportation of merchandise for benefit of drawback to the British North American provinces adjoining the United States, and enumerating certain ports, "declared ports from which foreign goods, wares, and merchandise, on which the import duty has been paid, or secured to be paid, may be exported to ports in the adjoining British provinces, and to which ports foreign goods, wares, and merchandise, may be transported, inland or by water, from the port of original importation, under existing provisions of law, to be thence exported for the benefit of drawback."

The course to be pursued in the transportation, inland, of foreign merchandise, in the original packages as imported, to the designated ports of exportation enumerated in the 7th section of the act, is to be similar to that prescribed in the 79th section of the general collection act of the 2nd of March, 1799; and all the legal requirements and forms of law must be strictly pursued, in cases arising under this act.

In the exportation by sea to ports in the adjoining British provinces, all the existing requisitions of law, regulating the exportation of merchandise to foreign ports, for the benefit of drawback, must be fully complied with.

On the arrival of merchandise transported inland, at either of the enumerated ports of exportation, a strict and thorough examination of the same must be made by an officer of the customs, to see that the goods are identical with those described in the accompanying transportation certificate, granted by the collector of the port from whence they may have been originally transported.

In the event of any detention of the merchandise, at the port of exportation, for any cause, said merchandise must be deposited either in the custom-house, or in some secure store-house, to be selected by the collector, the keys of which must be lodged in his hands. Any expense for storage must be defrayed by the owner or consignee of the goods. Before exporting the goods to their destined port in the adjoining British provinces, entry must be made according to the forms herewith marked E and F.

On the return of the manifest with the certificate thereon, in due form, to the collector of the port of exportation, it must be immediately transmitted to the collector of the district and port from whence the goods were originally transported, in order that the drawback of the duties may be duly paid by the collector of said port.

It is to be specially noted, that the law contemplating the probable retention of the original manifest at the foreign custom-house, requires a duplicate, or certified copy of the same, to be granted at the time of exportation, on which is to be endorsed the certificate of the foreign collector, and also the oath or affirmation of the master.

#### CANADA CUSTOM-HOUSE DUTIES CIRCULAR.

The following circular, dated "Inspector-general's Office, Montreal, April 7, 1845," addressed to the collectors of customs at the different ports in that province, and signed Joseph Carey, deputy inspector-general, refers to the act of Congress allowing drawback on goods exported to the territories adjoining the United States.

Sir.—With reference to a recent act of the Congress of the United States, allowing drawback on merchandise exported to the British provinces in North America, which, no doubt, has come under your notice, I have the honour to remind you that articles so exported from the United States, into this province, will be liable to the payment of the duties imposed by the acts of the provincial legislature, and also to the duties under the imperial act 5 and 6 Victoria, cap. 49, whe-

ther such goods are originally the growth, production, or manufacture of any of the British possessions in America, &c., or otherwise.

(On this point, your attention is requested to the 27th section of William IV., cap. 59, which enacts "that no goods shall, upon importation, be deemed to be of the growth, production, or manufacture of the United Kingdom, or of any British possessions in America, unless imported from some British possessions in America." Consequently, all articles from or through the United States, are deemed foreign, although an article may be the growth, production, or manufacture of the United Kingdom; which, held to be liable to duty as foreign goods; that is, to the duties in force of the imperial parliament, and of the provincial legislature, imposing force, viz.: Imperial Act 5 and 6 Victoria, cap. 49, and Provincial Act 6 Victoria, cap 31, the one in addition to the other."

## CHAPTER XXXII.

### LIFE, FIRE, AND MARINE ASSURANCES, IN THE

WE have given tabular statements of assurance companies in Massachusetts, under the heads of Boston and New York.

The practice of *underwriting* marine insurances, (which we have been enabled to ascertain), exist in the United States.

*Life insurances* may be divided into three classes. In the first class, stock companies, the *personal liability* of the members is limited to the amount of their shares in the joint-stock, and depends in the first instance on the limitation allowed or imposed by the respective laws. The first class merely engage to pay liabilities for policies, and divide the profit or loss according to the amount of stock among the members.

The second class are joint-stock companies with limited liability, instead of paying fixed sums at the termination of lives, they pay to the holders an annual interest, and divide a portion of the general balance of net profit among those who hold policies.

The third class is the mutual life insurance companies, which follow the same principles as in England. Each person assures himself, and being liable for a share of the losses, is a partner in the concern, or corporation.

The management of insurance companies in the United States is usually, as in England, to a board of directors, with a president, an actuary, secretary, &c.

1st. The Massachusetts Life Insurance and Trust company, the first or proprietary class, transacts its business under the following regulations:—

"Every person desirous of making insurance on his own life, or on the life of other person, or who wishes to contract for reversionary payments,

sign a declaration by himself or agent, according to a printed form to be furnished by the company, setting forth the age, occupation, place of birth, state of health, and other circumstances attending the life or lives insured, or the life upon the failure of which the reversionary payment of the annuity is to commence. The company may also require a certificate of the health of a person, from a physician of established reputation. An application for an annuity on a life, must state the age of the party to whom it is granted. Any misrepresentation in these declarations, vitiates the contracts.

"Policies of insurance and revisionary contracts are void, if the person whose life is insured shall die upon the seas, or upon any of the great lakes, or shall, without the consent of the company, previously obtained and endorsed upon his policy, pass beyond the settled limits of the United States, excepting into the settled limits of the British provinces of the two Canadas, Nova Scotia, or New Brunswick; or shall, without any such previous consent thus endorsed, visit those parts of the United States which lie south of the southern boundaries of the state of Virginia and Kentucky; or shall, without such previous consent thus endorsed, enter into any military or naval service whatsoever, the militia not in actual service excepted; or in case he shall die by his own hands in, or in consequence of, a duel, or by the hands of justice, or in the known violation of any law of these states, or of the United States, or of the said provinces." This last provision is rather vague. "A person must have an interest in the life he insures, if it be not his own life. No policy takes effect until the first premium shall be paid, and the annual premiums must be paid the day they fall due, otherwise the policy expires; but it may be revived at any time within fifteen days, the person on whose life the assurance was made, being then alive and in good health, by the payment of said premium, together with an additional sum of ten per cent upon such premium. All claims will be settled within sixty days after notice, and satisfactory proof of the claim shall be made. Annuities must be demanded by the annuitant in person, or satisfactory proof must be given that the annuitant is still alive. A charge of one dollar is made for each policy of a common form; but where a special contract is required, the expense of drafting it must be borne by the assured. The company reserves to itself the right of making any alterations, which the particular circumstances of applicants may, in their opinion, render expedient. Insurances for one year may, or may not, be renewed at the pleasure of the company." Their refusal may be obviated by insurance of seven years, or for life.

**ANNUITIES.**—"The company will grant annuities during the continuance of any given life or lives, and make the payments either quarterly, half yearly, or annually, as shall be agreed upon. The payments may commence immediately, or be deferred for any given time. There are two methods of making these contracts, upon principles which differ essentially from each other. In the one, a moderate rate of interest is allowed upon the capital paid (either in money or stock) for the annuity, and, at the expiration of the life, the whole of that capital is paid back (within sixty days from its falling in, and in the stock or property at fair valuation that the company has then on hand; the same is done in an endowment in trust) to the heirs of the annuitant, or to any person legally authorised to receive it. This contract may, for the sake of distinction, be called an annuity in trust." (It is a sort of savings' bank; the smallest sum so received is 500 dollars, and for any sum less than 2000 dollars, the interest is payable only annually; over that, they may purchase it in semi-annual or quarterly payments.) "In the other case, a large interest is allowed during the life of the party, and, at his death, the capital becomes the property of the company. A contract of this kind, is generally called an annuity on a life.

"In the preceding proposals, the company," say they, "have offered as favourable terms to the applicants as they could, consistently with the safety of the property intrusted to their care, which object has been constantly kept in view." (In trusts, they charge for management one-half of one per cent per annum, only.) "The annual return made to the governor and council, which, without expressing the particular sums deposited by individuals, will contain a schedule of the amount of capital stock and all the property in possession of the company, with the manner of its investment, will always be open to the inspection of any person transacting business with the company." The legislature direct the kind of property, in general, in which investments shall be made by the company; which is to consist in United States funded debt, or Massachusetts

State stock, the stocks of incorporated banks in that commonwealth, and notes secured by mortgages. The above are, generally, our American life offices.

2nd. The *Girard Life Assurance, Annuity, and Trust Co* which is of the *second*, mixed class, has similar rules and regulates insurance on the life of "a healthy person not engaged in any trade and residing within the settled limits of the United States, north or south of Virginia and Kentucky, or within the settled limits of Maryland, Delaware, New Jersey, New York, Pennsylvania, New Hampshire, New Brunswick, or New Brunswick." They state that it is their object to offer the following advantages :—

1. Assurers for life to participate in the income.
2. A moderate sale of premiums.
3. Increased facilities for effecting assurances.
4. An ample capital, this being a mixed company, and, in the United States of that kind, paid in for the security of the assured.
5. Prompt settlement of claims; without dispute or litigation.
6. Repurchase of policies, in certain cases.
7. Payments of premiums, received either in the whole sum, or in monthly amounts.
8. The reception and management of trusts.

"The improvements which experience has introduced into life insurance and trusts in England, will be adopted by the company. The profits will be apportioned between the stockholders and the assured, in the same manner as in the usual English apportionment, the former, and two-thirds of the net profits to the latter.

"The rates of insurance, annuities, and endowments, will be determined by the same experience will warrant, with a due regard to the safety of the assured."

The legislature of Pennsylvania insisted "That the whole capital of the company be paid in within two years from the date of its incorporation, and that the company be subject to the regulations by the courts into the state of its affairs; affording, if possible, the most ample security to all who do business with the office. That the company be subject to the greater security of all interested, have, for the present, limited to a specified amount; No person can be elected a manager or trustee, unless he has paid in at least one hundred shares of stock. No manager or trustee can be elected a manager or trustee; which, in these days of logrolling and money nepotism, perhaps he considered a transcendent item of security and safety. No person can be elected a manager or trustee, unless he has paid in one-fifth the amount insured immediately, on satisfactory proof of the claim; and the remainder of the claim within the period of six months."

Their charter authorises them to receive and manage estates of all kinds, in any description, that may be committed to their charge, whether by individuals, or corporate bodies. They are authorised to become trustees of minors and lunatics, and trustees under wills. From the moment the company becomes responsible for the safety of it, and the company is pledged for its repayment, with the proceeds or interest stipulated; and the by-laws and regulations of the managers to enforce that security. They also receive money in small or large sums, for a term of years, or for a longer period, or for a shorter period, at a short notice, on which interest will be paid; thus becoming a bank of deposit. In the reception and execution of these trusts, the company say they, having due regard to the security of the institution of its funds, will make the most liberal arrangements, as to interest and charge of commissions, that the circumstances of the case will warrant.

3rd. The *Mutual Life Insurance Company of New York* was incorporated on the 12th of April, 1842. "Expecting to go into operation by the 1st of July, 1842, when the amount of 1,000,000 dollars will be applied to be insured, the sum of between 700,000 and 800,000 dollars already

in the short space of eight months. The act makes those asking for it, and all other persons who may hereafter associate with them, in the manner hereinafter prescribed, a body politic and corporate, by the name of the Mutual Life Insurance Company of New York. In addition to the general powers and privileges of corporations, as the same are declared by the third title of the eighteenth chapter of the first part of the revised statutes, the corporation thereby enacted shall have the power to ensure their respective lives, and to make all and every insurance appertaining to, or connected with, life risks, and to grant and purchase annuities. All persons who shall hereafter insure with the said corporation, and also their heirs, executors, administrators, and assigns, continuing to be insured in said corporation, as hereinafter provided, shall thereby become members thereof during the period they shall remain insured by said corporation, and no longer. The board of trustees shall consist of thirty-six persons. They shall, at their first meeting, divide themselves by lot into four classes, of nine each; the terms of each expiring successively, in one, two, three, and four years, so as always to have experienced men. They are re-eligible. The seats of these classes shall be supplied by the members of this corporation by a plurality of votes; an insurance of 1000 dollars, at least, entitling a member to a vote.

"Every person who shall become a member of this corporation by effecting insurance therein, shall, the first time he effects insurance, and before he receives his policy, pay the rates that shall be fixed upon and determined by the trustees; and no premium so paid, shall be withdrawn from said company, except as hereinafter provided, but shall be liable to all the losses and expenses incurred by this company during the continuance of its charter. The whole of the premiums received for insurance by said corporation, except as provided for in the following sections, shall be invested in bond and mortgages, or unincumbered real estate within the state of New York; the real property to secure such investment of capital shall, in every case, be worth twice the amount loaned thereon. In order to avoid a great land monopoly, all real estates as shall not be necessary for the accommodation of the company in the convenient transaction of its business, shall be sold and disposed of within six years from the time they acquire a title to the same. A certain portion of the premiums, not to exceed one-half, may be invested in public stocks of the United States, or of this state, or of any incorporated city in this state—New York. Suits at law may be maintained by said corporation against any of its members, for any cause relating to the business of said corporation; also, suits at law may be prosecuted and maintained by any member against said corporation, for losses by death, if payment is withheld more than three months after the company is duly notified of such losses.

"The officers of said company, at the expiration of five years from the time that the first policy shall have been issued and bear date, and within thirty days hereafter, and during the first thirty days of every subsequent period of five years, shall cause a balance to be struck of the affairs of the company, in which they shall charge each member with a proportionate share of the losses and expenses of said company, according to the original amount of premium paid by him, but in no case to exceed the amount of the premium. Each member shall be credited with the amount of said premium, and also with an equal share of the profits of the said company, derived from investments and earnings in proportion to said amount; and in case of the death of any member of said company, the amount standing to his credit at the last preceding striking of balance as aforesaid, together with the proportion which shall be found to belong to him at the next subsequent striking of said balance, shall be paid over to his legal representatives or assigns, within three months after the said last-mentioned balance shall be struck. Any member of the company, who would be entitled to share in the profits, who shall have omitted to pay any premium, or any periodical payment due from him to the company, may be prohibited by the trustees from sharing in the profits of the company; and all such previous payments made by him, shall go to the benefit of the company. A provision is made for an ample public statement of the details of business, losses, profits, investments, &c. No policy shall be issued by said company until application shall be made for insurance, in the aggregate, for 500,000 dollars at least; and the trustees shall have the right to purchase, for the benefit of the company, all policies of insurance, or other obligations issued by the company."

This company thought fit to exceed even the security of incorporation, and did not go into operation until there were 1,000,000 dollars of life insurance.

Chancellor Kent states :—

"The terms and conditions of the English policies are more rigorous than those of the American policies on lives." The English act of 14 George III., is now hardly looked to in our legislation. The statutes of Massachusetts for life insurance companies by title, unless in case there is a reference to their charter, which ought to set out especially their powers. Section thirty-seven of Massachusetts Revised Statutes, with the broad title "Insurance Companies," contains the exercise of foreign agencies for insurances, still under that title. "All insurance companies that have been, or shall hereafter be incorporated in this commonwealth, may exercise the powers, and be subject to the provisions contained in this chapter, so far as may be consistent with the provisions of their charters." Section fortieth of this thirty-seventh chapter, contains the exercise of foreign agencies for insurances, still under that title. I have cursorily remarked before. The above chapter refers to corporations. It contains general statutory provisions concerning corporations.

"April 1st, 1840.—The people of the State of New York, by their Assembly did enact as follows :—Section 1st. It shall be lawful for any person, by herself and in her name, or in the name of any third person, trustee, to cause to be insured, for her sole use, the life of her husband, or for the term of his natural life; and in case of her death, the sum or net amount of the insurance becoming due and payable to her estate, shall be payable to her, to and for her own use, free from the claims of representatives of her husband, or of any of his creditors; but such where the amount of premium annually paid shall exceed 300 dollars."

"Section 2nd. In case of the death of the wife before the death of her husband, the amount of the insurance may be made payable, after her death, to her estate, and to their guardian, if under age."

"Most of the insurance offices in the United States propose to the Massachusetts Hospital Life Insurance Company, contracts, so as to accommodate persons in almost every age. Insurance may be made for one year, for several years, or for life. It may be made on one life, on two, or on more lives; to commence in day. They will grant annuities upon two or more lives, in which they are susceptible; as, for example, on the joint lives (that is, an annuity which is to cease when any one of the lives shall die), on one life after the death of another; as, for a widow after the death of her husband, or a child after the death of his father."

#### BANK OF ENGLAND.

Quarterly average of the weekly liabilities and assets of the Bank of England, from the 10th of December, 1839, to the 3rd of March, 1840, both inclusive, pursuant to acts 3 and 4 William IV., chap. 98.

LIABILITIES.		£	ASSET

the last account there is an increase upon each item—on circulation, 167,000*l.* ; on deposits, 326,000*l.* ; on securities, 242,000*l.* ; and on bullion, 307,000*l.* The actual stock of bullion in the bank at this moment, is estimated to be about 4,500,000*l.*

## INSURANCE COMPANIES WEST OF THE ALLEGHANY.

It appears, from an article in the *Merchants' Magazine*, that the first insurance company established in the west, was at Lexington, Kentucky, which went into operation about 1816, but ceased to exist in one or two years. The second was the old Cincinnati Insurance Company, established in 1818, which issued some fifty or sixty policies, and in one or two years closed up its concerns. The third was the old Louisville Marine Insurance Company, which was established in or about the year 1818, and issued two hundred policies or upwards, and some years afterwards wound up its affairs. The fourth is the Cincinnati Equitable Fire Insurance Company, established in 1825, and is now in operation, and conducted on the principles of *mutual* insurance. The fifth was the Ohio Insurance Company, established in 1827, at which period there was no local insurance company in the west, with the exception of the Equitable Fire Insurance Company referred to, the Fire and Marine Insurance being at this period confined to the eastern offices, and their agencies in the west. To those familiar with the history of that period, it will be recollected that for several months pending the establishment of the Ohio Insurance Company, it was exceedingly doubtful whether it could be put in operation, from the difficulty of disposing of a sufficient amount of the stock ; but having commenced its operations, its success was decided, and two years afterwards arose, in 1829, the Cincinnati Insurance Company.

These two companies had, by their charters, a capital of 250,000 dollars each. The same year, the Louisville Marine and Fire Insurance was organised, and went into operation, capital, 200,000 dollars. In 1830, three new offices were established in the west, viz. : the Louisville Mutual Fire Insurance Company, the Louisville Merchants' Insurance Company, and the Wabash Insurance Company, with an aggregate capital of 400,000 dollars. In 1831, two more were added, viz. : the Madison Insurance Company in Indiana, and the Missouri Insurance Company at St. Louis—aggregate capital, 200,000 dollars. In 1832, three more were added, viz. : the Fireman's Insurance Company at Cincinnati, the Lansingburgh Insurance Company, and the New Albany Insurance Company in Indiana—aggregate capital 400,000 dollars. In 1833, but one was added to the number, viz. : the Franklin Fire Insurance Company, at Frankfort, Kentucky—capital, 100,000 dollars. But in 1834, seven new offices were chartered at Warren, Dayton, and Cleveland, in Ohio ; at Maysville and at Louisville, in Kentucky ; and at Jeffersonville and Rising Sun, in Indiana—aggregate capital, 800,000 dollars. In 1835, nineteen additional offices were established, viz. : seventeen in Ohio, and two in Kentucky—aggregate capital 1,600,000 dollars. In 1836, fourteen more were chartered, viz. : eight in Ohio, three in Kentucky, two in Indiana, and one in Missouri—aggregate capital 1,800,000 dollars. In 1837, twenty-two more were chartered, viz. : two in Ohio, seven in Indiana, and thirteen in Missouri—aggregate capital, 4,000,000 dollars.

The foregoing enumeration, however, embraces only the offices chartered in the four western states of Ohio, Kentucky, Indiana, and Missouri. No office was established in Tennessee, Illinois, Western Pennsylvania, or Western Virginia, until 1832, since which, fifteen or twenty companies have been established in these states, with an aggregate estimated capital of 1,500,000 dollars. Mississippi and Louisiana have been omitted in the foregoing calculation, as our statistics do not furnish adequate data for the occasion, but we estimate the amount of capital in these two states at, perhaps, 300,000 dollars.

Thus, we perceive, that in 1826, twelve years since, there was no local insurance office in the western states, north of Natchez, except the Equitable Fire Insurance Company at Cincinnati ; that in 1833, seven years after, there were only twelve, with an aggregate capital of 1,800,000 dollars ; but that in the four succeeding years, to the spring of 1838, the number was increased to considerably more than one hundred, the whole wielding, in the aggregate, the immense capital of 15,000,000 dollars.

## ASSURANCES AGAINST LOSSES BY FIRE.

The fire assurance or insurance companies in the country are of two sorts : first, those that have a fixed capital determine the amount of the capital, which is divided into a certain number of shares, which must be paid in, and secured according to the provisions of the charter. The number of directors is also fixed, from among whom one is selected to be president, and the others are annually chosen by the stockholders for one year, or until death or resignation, others may be appointed as may be provided by the by-laws. A company is not allowed to commence the business until the whole of the capital stock shall have been paid in and a certificate of that fact been made by the president and secretary of the company. The whole assets of the company are liable for the payment of the claims in case of a large loss, the stockholders forfeit all their interest in the company if it is affected. Dividends are made out of the surplus profits : first, out of the profits on the capital, and from the receipt of premiums, after the expenses are paid, provided the capital is unimpaired ; but no dividends are made while the capital stock is impaired, or until such dividend is made good.

Charters which have been obtained in the state of New York since 1830, usually have a clause inserted in them, that they "shall be subject to the powers, and be subject to the provisions of the eighteenth part of the Revised Statutes, so far as the same are applicable, and until repealed."

The second class of insurance companies are those mutual companies. In these every insurer becomes a member of the company for a period for which he shall remain insured, and in amount of premium which he pays into the company ; and for this case of a loss. The capital is not fixed or determined as in the case of the former companies, but is in proportion to the amount of the capital stock. The profit or dividend is divided among the stockholders, in proportion to the amount of money paid in by them. Premiums, in the same manner as shareholders in other companies. The board of trustees are elected in like manner, and for one year, or until death or resignation, others may be appointed as may be provided by the by-laws. There is a clause generally inserted in their charters, that no business shall be issued until application for insurance shall have been made, and that they may be provided for a loss at their common expense, or until such dividend is made good.

"In addition to the fire companies chartered by the legislative authorities of the several states and of England established by the laws of the United States, who insure through the intervention of agents. They generally

than the city offices, in order to secure a portion of the business; for most insurers prefer obtaining policies from companies chartered by this state, on account of the facility with which they can obtain a knowledge of their character and capability to sustain a loss, and the rules by which they are governed; but the most important reason is, in cases of litigation arising from a loss, the party insured would be obliged to prosecute his claim in another state or country, and be governed by laws and customs with which he is, perhaps, unacquainted; besides the additional trouble and expense attending such a necessity. There is also an advantage gained by insuring in foreign companies, in the event of an extensive conflagration; for they are likely to be more secure, on account of their having fewer risks in this city, as was seen in the case of the great fire in December, 1835. That event caused the failure of several of our offices, owing to their having a large amount of risks in that part of the city which was consumed. The ruin of some merchants who were insured in them was the consequence, while those insured in the foreign offices recovered in full; because these had not issued policies to any considerable amount, and therefore their losses were not so great as materially to impair their capital. It is due to our offices, however, to state, that they are very cautious in distributing their risks, so that nothing but an uncommonly great disaster, such as that above referred to, would endanger their safety, their custom being to insure not over from 5000 to 15,000 dollars, according to their capital, on any one building, without procuring reinsurance; and no more in the immediate neighbourhood of a previous risk, or where a fire would be likely to extend.

The following table shows the number of companies, and the amount of capital in this city at the respective dates. Some of the companies included here are of a mixed character, being not only fire companies, but also taking risks upon marine and inland navigation, and upon lives.

D A T E.	Number of Companies.	Amount of Capital.	D A T E.	Number of Companies.	Amount of Capital.
		dollars.			dollars.
1806.....	5	2,500,000	1830.....	21	7,990,000
1820.....	12	6,200,000	1835.....	26	9,700,000
1825.....	30	11,600,000	1840.....	23	6,661,000

In addition to the above, there are at present several agencies of other companies, belonging to other states, established in this city, whose aggregate capital is equal to as much, if not more, than that of our own companies. By the above table it appears that the amount of insurance capital, properly belonging to this city, is not so great now as it was in 1825, 1830, 1835, and but little more than it was in 1820. This can be accounted for from the fact that the business of insuring has not been found profitable enough to support the different companies which have arisen during the last twenty years. Some old companies have suffered their charters to expire, and others have been destroyed by the fire.

One-quarter per cent to be added on hardware.

## GENERAL REGULATIONS.

1. If there be any lime on board on cargo, or on freight, fix the premium for the passage.
2. If any goods are shipped and insured as on deck, not less than one-quarter per cent shall be charged, with condition not to be liable for damage by wet or loss under fifteen per cent.
3. The north-east, or unfavourable monsoon in the China sea, is from the 1st day of October to the 1st day of April.
4. The south-west, or unfavourable monsoon for homeward passage, is from the 1st day of April to the 1st day of October.
5. The hurricane months in the West India latitudes, are from the 15th day of October, and said latitudes shall be considered as of 10 degrees and 28 degrees of north latitude, and 58 degree longitude.
6. The North Sea, as expressed for additional premiums for the 1st day of October to the 1st day of March), is considered north, and east of longitude 2 degrees east.
7. For any other division or allowance of average for partial loss of the assured under deck, than is provided for in our printed regulations, premium shall be charged of not less than one-quarter per cent, except in cases from Great Britain and Havre already provided for in this schedule, north and east of Florida coastwise, on which not less than one-quarter per cent premium shall be charged.
8. To add not less than one-quarter per cent for each port used at the beginning or the ending of the voyage, for each time used ;

the 14th article, and, except Elsineur, Anjer, St. Helena, and a port for advice in the British Channel.

9. In all cases of over-insurance, ten per cent of the return premium is to be retained by the insurers, not exceeding one-half per cent on the amount of short property.

10. Premiums on vessels and freights not to be less than those on cargoes of general merchandise for same voyages.

11. Specie and bullion, excepting to port or ports beyond the Cape of Good Hope or Cape Horn, to be insured as the parties may agree: provided, that it shall never be at a greater reduction than one-third from the rates herein fixed for merchandise on the same passage.

12. Specie and bullion, to port or ports beyond the Cape of Good Hope or Cape Horn, may be insured at one-quarter per cent less than merchandise.

13. When several passages are included in the same policy, the rates for each passage are to be added together.

14. If insurance be made from foreign ports to port or ports of discharge, or final port of discharge, in the United States, the coastwise premium to be added for each port used, more than one, in the United States.

15. With regard to risks not provided for in this tariff, it is agreed that the parties are to make contracts at discretion, but it is expected that companies will require rates equivalent to those named in this tariff on risks of like value, acting in good faith, and not taking one risk for a lower rate in consideration of receiving the tariff rates on another.

16. Copenhagen is considered as in the Baltic.

17. Gottenburg is not considered as in the Baltic.

INLAND NAVIGATION INSURANCES. — The Boston premiums for inland insurances are so nearly the same as those in the tariff of premiums which we have inserted under the head of "New York," that it would be superfluous to insert those of Boston here.

CLASSES OF HAZARDS AND RATES OF PREMIUMS FOR INSURANCE AGAINST LOSS OR DAMAGE BY FIRE, IN THE CITY OF NEW YORK, AS ADOPTED BY THE NEW YORK INSURANCE COMPANIES.

RULES.

1. When two buildings, having no interior communication, are offered for insurance, a specific sum must be insured on each, and in like manner on property in each; but two buildings, *having* interior communication, *and occupied by the same person*, may be considered as *one* building.

2. When a building, or two or more buildings communicating, are occupied by two or more tenants, either of whom requires the hazardous or extra-hazardous privilege, the other tenants, as well as each of the buildings, shall be subject to the same charge.

3. When two buildings adjoining, with separate walls through the roof, communicate by doors or other openings, *five* cents additional premium to be charged on such and their contents, if occupied by more than one tenant.

*Note.*—No charge to be made for want of coping on a separating wall on which the charge is made for communication.

4. Policies may be once renewed for the ratio of the premium required for the period of time for which the policy was originally made.

5. Policies, with the consent of the company, may be assigned, or may be transferred from one building to another, the difference in the risk, if any, being paid.

6. A policy may be cancelled by retaining the short rate for the time expired, but in no case for less than one month, and the premium for unexpired time allowed in a new insurance, or refunded.

7. Carpenters' risks for *fifteen days*, may be granted *once* during the existence of the

same policy, *gratis* ; but if granted for more than fifteen days charged according to the scale for short insurances.

8. No premium for *less than one month* shall in any case carpenters' risk, which may be taken for fifteen days at half the

CLASSES OF BUILDINGS, AND RATES OF ANNUAL PREMIUMS.  
NEW YORK.

The rates affixed to the several classes, are the premiums for purposes not hazardous, or containing merchandise, or otherwise occupied, the following additional premiums are as well as on merchandise and other property therein :

Hazardous occupancy . . . . .  
Extra hazardous ditto . . . . .  
Specially hazardous, the premium that may be agreed on in each case  
Merchandise, not hazardous, is charged in addition to the rate for containing it . . . . .

Merchandise, and other articles, denominated hazardous on which a star (\*) is prefixed in the classes of hazards and minimised in reams, books, stationery, watches, jewellery, &c.), are deemed in which they are contained, or other property therein.—The articles being charged, because of their peculiar liability to damage.

DWELLING HOUSES.

- 1st Class. Buildings of brick or stone, roof of tile, slate, or metal, the roof, and coped, per 100 dollars . . . . .  
If gable or party walls below the roof . . . . .  
2nd. Buildings of brick or stone, roof, tile, slate, or metal, and party walls . . . . .  
3rd. Buildings of brick or stone, roof, wood . . . . .  
4th. Buildings of wood, with brick front, and filled in with brick . . . . .  
5th. Buildings of wood, with brick front, filled in to the plate . . . . .  
Or buildings of wood, filled in to the peak . . . . .  
Or buildings of wood, adjoining brick walls on each side . . . . .  
6th. Buildings of wood, with hollow walls, and brick front . . . . .  
Or buildings of wood, filled in to the plate . . . . .  
Or buildings of wood, adjoining a brick wall on each side . . . . .  
7th. Buildings of wood, with hollow walls, fronting on the street . . . . .  
Or buildings of wood in the rear . . . . .

*Note.*—Buildings which partake of two or more classes, to be charged at the highest price.

WAREHOUSES AND STORES.

Of the following description, will be insured, per 100 dollars,  
Situations—in streets not less than fifty feet wide.  
Height—not exceeding forty feet.  
Walls—brick or stone, independent, and twelve inches or more thick.  
Or party walls, sixteen inches to the garret floor.  
Or party walls, twelve inches to the garret floor, with proper gables.  
The gable or party walls in each case carried above the roof.  
No openings in the gable walls, excepting on the corner or for ventilation.  
Roof—tile, slate, metal, or cement.  
Gutters—brick, stone, or metal.  
Window shutters—solid iron, excepting the lower story front

No dormar windows, unless with iron shutters, the sides and roof of fire-proof materials.

No sky-lights, exceeding ten square feet.

*Additional Charges for variations from the foregoing description.* cents.

Street—less than fifty feet wide, for each foot less . . . . . 1

Height—more than forty feet from the sidewalk to the eave of the roof, for the excess, per foot . . . . . 2

*Note.*—The highest part of the front in all cases to be measured, and when fronting on two streets, the lowest front to be taken. In measuring the height of buildings, or the width of streets, the odd inches are not to be taken into the account.

Walls—twelve inch party walls to the garret floor, without projections, for each wall . . . . . 6

*Note.*—This charge not to be made on buildings less than four stories high.

Gable or party walls—not above the roof, for each wall . . . . . 3

Roof—tile, slate, or metal, and a part wood . . . . . 6

All wood . . . . . 15

Shutters—not of solid iron, for each wall . . . . . 5

Excepting the lower story fronting the street, and excepting one of the walls at the corner of a street, if the other be charged.

Gutters—not of brick, stone, or metal, front and rear, for each . . . . . 5

Corner buildings to be charged for only one front.

Dormar windows—without iron shutters, or without the sides and roof of fire-proof materials . . . . . 5

Skylights—exceeding ten square feet . . . . . 5

*Note.*—When the premises are occupied by one tenant only, five cents per 100 dollars are to be deducted from the rate of premium. The separate use of fire or lights to constitute two tenants.

When the rate of a building exceeds 100 cents (exclusive of the charge for occupancy), the excess to be discretionary.

CLASSES OF HAZARDS.

*Not Hazardous.*—Goods not hazardous are to be insured at five cents per 100 dollars in addition to the rate of the building in which they are contained; including coffee, flour, household furniture, indigo, linen, paints ground in oil, potash, rice, spices, sugars, teas, threshed grain, wine in casks, and such articles as are usually kept in dry-goods' stores.

*Hazardous.*—The following trades and occupations, goods, wares, and merchandise, are considered *hazardous*, and are charged ten cents per 100 dollars, in addition to the rate or premium on the building, viz.:—\*Basket-sellers; block and pump-makers; China or earthen or glass-ware, or plate-glass in boxes, crates, or casks; cotton in bales; fire crackers and other fire works; flax; grocers with any hazardous articles; gun-smiths; \*hardware and cutlery; hat-finishers, hay pressed in bundles; hemp; liquor bottling cellars; \*looking-glasses in boxes; Manilla grass; \*milliners' stock; oil; \*paper-hangings; \*paper in reams; pitch; porter houses; rags in packages; sail-makers; saltpetre; cigar-makers; spirituous liquors; sulphur; tallow; tar; taverns; turpentine; victualling-shops; \*window-glass in boxes; wine-dealers' stock, not including wine in glass, unpacked; \*wine, in glass; in packages; \*wooden-ware sellers.

*Extra hazardous.*—The following trades and occupations, goods, wares, and merchandise, are deemed *extra hazardous*, and will be charged twenty-five cents and upwards per 100 dollars, in addition to the rate of premium on the building, viz.:—Acids, inflammable; alcohol; apothecaries; basket-bleachers or makers; blacksmiths; boat-builders; \*book-sellers' stock; brass foundries; brush-makers' stock; \*cabinet-makers' stock; carvers; China, or earthen, or glass-ware, or looking-glasses unpacked, and buildings in which the same is packed or unpacked; chocolate-makers; colourmen's stock; \*confectioners' stock; coopers; copper plate printers; druggists; ether; fur dressers; grate-makers; \*jewellers' stock; lamp manufactories; \*lamp sellers' stock; lime unslaked; liquor, in glass, un-

packed. (*Note*.—To subject the building and its contents to Morocco manufacturers ; \*optical, mathematical, and musical perfumers' stock ; painters' stock ; phosphorus ; \*pictures and ware manufactories ; plumbers and pewterers ; \*pocket-book or newspapers or engravings ; rag stores ; ship chandlers ; \*silversmiths ; soap-makers ; spirits of turpentine ; stove manufacturers ; tobacco manufactories ; \*toy shop keepers' stock ; typographers ; upholstery manufactures ; varnish ; \*watch-makers' stock ; plate glass, unpacked ; wine, in glass, unpacked.

*Specially hazardous*.—The following are deemed specially charged, in addition to the rate of the building, as per table of Bakers ; bark-mills ; bleaching-works ; blind-makers ; bookbinding works ; cabinet-makers ; carpenters ; chair-makers ; chemists ; confectionery-makers ; corn-kills ; copper-smiths ; cotton distillers ; dyers ; firework-makers ; flax-mills ; frame-makers ; grist mills ; gas makers or sellers ; grist or flour mills ; gunpowder ; ink-makers ; iron foundries ; lamp-black manufacturers ; livery stables ; lumber ; malt-houses ; matches-makers ; metal mills ; musical instrument makers ; oil-mills ; packing buildings and yards ; paper-mills ; printing or grooving mills ; pocketbook-makers ; powder-mills ; printers ; rectifiers of liquors ; rope-makers ; sash makers ; saw-mills ; stables (private) ; steamboats ; steam-engines in use ; sugar refineries ; tanners ; tar boiling-houses ; theatres and other places ; timber yards ; turpentine distillers ; varnish-makers ; wool-mills and manufacturing establishments, and all trades and occupations, heat, not before enumerated.

*Country Houses*.—Constructed of brick, stone, or wood, detached, or connected by other buildings . . . . . 60 cents per

If roof of slate or metal, 10 cents per 100 dollars may be deducted.

Barns and stables . . . . . 85

*Note*.—When good and sufficient electric conductors are at hand, 10 cents per 100 dollars may be deducted.

#### MINIMUM Rates for Hazardous, Extra Hazardous, and Special Risks, to be added to the Rate of the Building.

*Note*.—When goods, hazardous or extra hazardous, are stored in a building is used for the purpose of carrying on any trade or vocation, *extra hazardous*, or *specially hazardous*, such building, as well as the goods therein, shall be charged with the *additional* premium to which it is entitled, excepting when a *star* (\*) is prefixed, which is intended to denote that the building is to be charged, but *not the building*, or other goods *not hazardous*.

The origin of the fires, during the year 1840, according to the commissioners' report, were:—

Supposed to be by incendiaries, forty-three ; supposed to be accidental, twenty-three ; cause unknown, two ; by an incendiary, one ; chimneys, three ; defect in chimneys, three ; sparks from forge, two ; foci matches, three ; lighted candle, one ; spirit lamp, one ; defect not ascertained, two ; from stove-pipe, one ; sparks from candle, one.

*Description of Buildings in which Fire originated*.—Frame, brick, thirty-four ; stone, three ; brick fronts, five ; fire proof, three.

## PROFITS OF INSURANCE COMPANIES.

The Atlantic Insurance Company of New York has, in ten years, divided 249½ per cent, and had in 1841 a surplus on hand of 150 per cent, which, if divided, would give the stockholders their capital back, and 300 per cent; and if the interest on the dividends were added, the sum would be much larger.

The following are the dividends declared the first ten years:—

	per cent.		per cent.

## LIGHTHOUSE ESTABLISHMENTS OF THE UNITED STATES.

(Extracts from Reports to Congress.)

*Original Cost of Construction.*—The committee have gone no further back than the year 1791, when the number of lighthouses were only ten, and the entire expense of that year was 22,000 dollars. From that period to the present, the increase has kept pace with the rapidly growing commerce and navigation of the country.

The present number of lighthouses is . . . . . 256  
 " lightboats . . . . . 30  
 " beacons without lights . . . . . 35  
 " buoys, about . . . . . 1000

The total cost of the lighthouse, lightboat, beacon, and buoy establishment (including cost of sites, buildings, repairs, maintenance, &c.), from 1791 to 1817, was (round numbers) . . . . . 1,872,000 dollars.  
 " from 1817 to 1841 . . . . . 7,216,000

Total . . . . . 9,088,000

Being an average per annum expense of about 180,000 dollars.

The total cost of building lighthouses (including cost of sites), lightboats, beacons, and buoys, from 1791 to 1817, was . . . . . 305,000  
 " 1817 to 1841 . . . . . 1,910,000

Total . . . . . 2,215,000

Deduct cost of beacons and buoys . . . . . 500,000

Total for 286 lighthouses and boats . . . . . 1,715,000

Being an average of about 6000 dollars: showing, in the great economy in these constructions.\* Probably truer economy would be effected by more liberal appropriations for these works, there being no waste and permanency.†

*Comparative Costs of Different Years.*—The amount of year, compared with that of another year, will appear more clearly from the number of new constructions, either of houses or boats, in any year, amount of repairs, cost of oil, &c. Some seasons are noted for their storms; in such years the expense of repairs will be increased, and, therefore, will only enable us to draw conclusions from the general expenditure.

The entire expense of 1841 was 474,000 dollars; showing a decrease of that of 1791, when, with ten lighthouses, the expense was only 22,000 dollars. Had the expense remained in the ratio of 1841 to 1791, it would have been, in 1841, 643,000 dollars.

In 1820, the number of lighthouses, &c., were fifty-five. The expense for the year was 244,000 dollars. It should have been 842,000 dollars. The increase of expenditure had been in the ratio of the increase of the number of houses, 201; expenditure, 382,000 dollars. In 1841 should have been 549,000 dollars.

For the last four years the amount expended in comparison with the building of houses and purchase of sites, has been great; the committee, greater than the requirements of navigation and commerce. In 1841, the aggregate amount of expenditure for all purposes was 533,000 dollars; being more than one-fourth of the whole expended for the same objects for twenty-five years, from 1816 to 1841.

It has been hardly possible that an unnecessary lighthouse should be built since 1837. In that year Congress, for the first time, very wisely directed the Navy Commissioners to cause thorough examinations and surveys of the sites proposed for lighthouses, in pursuance of the Act of the 3rd of March, in that year. These examinations are now in progress.

*Comparative Cost of Construction.*—From a report of the committee made to Congress, in 1836 (Ex. Doc. 1835—36, vol. iii., No. 1), it appears that the cost of lighthouses in the United States is on an average 19,000 dollars, and in France 8000 dollars. The Director-General of France (see Report of Select Committee on the Lighthouses, August 8, 1834, Appendix R.), it appears that the average cost of lighthouses, &c., in 1832 and 1833, was more, by some hundred dollars, than the estimate of the secretary.

The same report shows (p. 7) that the average cost of the construction of lighthouses, from 1820 to 1834, also exceeds the calculation of the secretary.

\* The expense of beacons and buoys, from 1791 to 1819, was 26,000 dollars. During this period, the expense has no doubt been greater, annually. During the same period, the expense of lighthouses, house, and beacon, and buoy accounts, have been classed together, and the committee have not been able to ascertain what the lighthouse establishment proper should be charged with. The average cost of these lighthouses, &c., per annum, for beacons and buoys, from 1791 to 1841, is, no doubt, more than 500,000 dollars.

† Since writing this report, the committee have received from the auditor a statement (marked B), giving the number of lighthouses built since 1820. From this statement it appears that the average cost of these lighthouses, &c., is less than 5000 dollars. The expenditures are less than the appropriations, and the average cost is more than 224,000 dollars.

From the statement furnished by the auditor, annexed (marked C) to the report, it appears that the average cost of the construction of thirty-three lightboats averages about 9100 dollars. The expenditure for these constructions is less than the appropriations by 59,000 dollars. The expenditure for these objects of 283,000 dollars less than the appropriations.

The average cost of sites and building thirteen lights in Ireland under the Dublin Board, from 1820 to 1834, is more than 65,000 dollars.—(Ibid., p. 74.)

From an estimate made by M. Fresnel, French Director of Lights (Ibid., Appendix R., p. 236), it is shown, that—

	dollars.
Thirty-one lights, to be built in 1833, 1834, 1835, and 1836, would cost on an average about . . . . .	20,000
Ditto, apparatus, lantern, lamps, &c. . . . .	4,500
Of these thirty-one lights, eighteen were to be of the first order, and would cost, on an average, for sites and building . . . . .	27,000
Ditto, apparatus, lantern, lamps, &c. . . . .	5,500

*Expense of Establishment, compared with that of England and France.*—From a report of the Fifth Auditor, made to Congress, October 1, 1835, it appears that—

	dollars.
The average expenses, per annum, of sustaining each lighthouse, including repairs, salaries of keepers, oil, &c., was . . . . .	911
Ditto, lightboats . . . . .	2862
Ditto, lighthouses in England . . . . .	2268
Ditto, lightboats in England . . . . .	5922

From the report of the Select Committee referred to (p. 30), the average expense of each of the lights is as follows:—

	£	dollars.
Thirty-six lighthouses in England under Trinity Board . . . . .	511	
Thirty-four ditto Ireland ditto ditto . . . . .	500	
Thirty-two ditto Scotland ditto ditto . . . . .	514	
Average . . . . .	508	= 2450
American, as above . . . . .		911
Difference in favour of America . . . . .		1539

*Expense of Light-Boats.*

	£	dollars.
Thirteen boats in England . . . . .	1334	
Three ditto Ireland . . . . .	1080	
Average . . . . .	1207	= 5841
American, as above . . . . .		2862
Difference in favour of American boats . . . . .		2979

From a report made by the Trinity Board, to which is intrusted the management of the British lights, made to the House of Commons, in 1837, the expenses are thus stated:—

	dollars.
Forty-two lighthouses, average expense . . . . .	2610
Thirteen floating lights ditto . . . . .	8381

For the year ending June 30, 1837, the expenses for the same services in the United States were as follows:—

	dollars.	dollars.
Two hundred and twelve lighthouses, average . . . . .	1115	
Twenty-seven floating lights . . . . .	2391	
Average expense of British lights . . . . .	5945	
Ditto ditto American do. . . . .	1753	

Difference in favour of American . . . . . 3742

Being more than 200 per cent in favour of American economy in this branch of the public service.

Besides, in England, commerce is heavily taxed, in the form of light-money, by

the owners and lessees of lighthouses, for their own emolument pensioners and charities. There are fourteen lighthouses thus of individual sagacity and private interest will usually insure enterprise or the sustaining of any establishment with an economy used by agents of governments. But the private lights in England expense much exceeding that of the United States.

Fourteen lights in hands of private persons in England, 18

Gross amount of collections	. . . . .
Allowance for collection	. . . . .
Expense of maintenance	. . . . .

#### Profits

Average expense of maintenance, 650*l.* (3140 dollars); 180 per cent expenditure. (See same report, p. 37.)

The annual expense of maintaining private lights of the first class being on an average 4760 dollars. (Ibid., p. 41.)

The expense of the third (smallest) class of individual lights, being more than 120 per cent more than the American lights.

This comparison is highly favourable to the economy of our establishment. *Comparison with French Lights.*—The report of the select committee (p. 31), states that the annual charge of maintaining a lens light in France, say 1640 dollars; but this is exclusive of repairs.

In all the French accounts of "expense of maintenance," says M. Fresnel, principal engineer (see Ibid, Appendix B.). (the British) expenditures are found mixed up with each other (maintenance and repairs); hence the impossibility of arriving, without at a comparative estimate of the two services (French and British). Our accounts are mingled in the same way; hence the likelihood of a comparison with the expenses of the French lights.

That the expenditure of the French establishment should be less than that of Great Britain, would excite no surprise, when the relative merits are taken into account.

The British committee (p. 31), after commenting on the unequal maintenance of French and British lights, say: "In explanation must be observed—

"1st. Salaries to light-keepers in England are understood to be higher than in France.

"2nd. The price of spermaceti oil used in England is stated to be higher than the price of oil de colza used in France."

Wages in this country are much higher than in England. The cost of sperm oil. Yet notwithstanding the great inequality in the cost of oil, it will appear from the evidence furnished by M. Fresnel that the management of our light establishment cannot justly be reproached with want of economy. M. Fresnel says (see p. 229, Appendix) that

The annual expenditure of a light of the first class (exclusive of repairs) is . . . . .

The annual expenditure of a light of the second class (exclusive of repairs) is . . . . .

The annual expenditure of a light of the third class (exclusive of repairs) is . . . . .

#### Average

Some nine per cent more than the cost of American lights, including

The report (p. 233) gives the expenditure of some of the lights specifically, from which it appears that the cost of maintenance is much larger than the above account of M. Fresnel, viz. :

	francs.	dollars.
Cordovan light of the first order, ordinary annual expenditure . . . . .	11,598	= 2204
Expense of repairs . . . . .		950
Total expense . . . . .		3154

Ushant light, first order (p. 235), ordinary annual expenditure (exclusive of repairs) . . . . .	9000	= 1710
St. Mathieu light, second order, ordinary expenses (repairs excluded) . . . . .	6000	= 1140

The average annual expense of these three lights (exclusive of repairs) is 1685 dollars; exceeding, by fifty per cent, the average expense of American lights.

The most expensive American light is that on Frank's Island, having two keepers, and, in 1841, amounted to 180,623 dollars, as follows :

	dls.	cts.
Keeper's salary . . . . .	600	00
Assistant . . . . .	360	00
Oil 779 gallons . . . . .	779	00
Tubes, glasses, &c. . . . .	68	23
Window glass and putty . . . . .	9	00

The average expense of the Cordovan and Ushant lights, both of the first order, was 1957 dollars, being more, by 151 dollars than the Frank's Island light.

The little experience we have had in this country in the use of the French lenticular apparatus, induces the belief that our anticipation in regard to the saving of oil, will not be fully realised.

The two lights in the lens plan, at Neversink, consume per annum 1095 gallons of oil; they consumed, on the old plan (thirty-one argand lamps), 992 gallons of oil.

This consumption of oil is about the same as that of a lens light of the first order in France.

It is said in the report (*Ibid.*, p. 32) that "the consumption of oil in the Cordovan lighthouse is equal to that of seventeen argand lamps." The average consumption, per annum, of such a lamp, is thirty-five gallons, which gives to the Cordovan light a consumption of 595 gallons per annum; being nine per cent more than that of one of the Neversink lights.

The French manufacturer of the lenticular apparatus claims for it a great saving of oil. Further experience in this country may demonstrate the reality of this claim. But it remains to be proved to what extent, if any, such saving may be carried.

The communication of M. Lepaute, the manufacturer, to Governor Davis (See Senate Doc. 1st. Sess., 26th Congress, No. 474), in which he attempts to show the difference in the consumption of oil in the French and American lights, does not inform us on what authority the quantities of oil consumed in the American houses are given. With the best intentions to give the quantities correct, he may not have been in possession of the true account of them.

He puts down the quantity consumed at the two Neversink lights, under the old plan, at 1135 gallons; but the amount consumed was 992 gallons only—a mistake of fifteen per cent in favour of his statement. He also puts down for the use of lens lights at that place, 800 gallons, but we consume in them 1095—a mistake of thirty-seven per cent in favour of the lens lights. The two mistakes, combined, show more than fifty per cent in favour of the lenses.

In like manner he puts down the consumption of oil at Frank's Island light, at the mouth of the Mississippi, at 1.050 gallons, but the true amount is only 779 gallons, an error of thirty-five per cent. Should the same errors extend through the whole of his table (and the committee have examined these two cases, being the only ones before them showing the actual quantity of oil consumed) the result, as stated by him, will hardly bear close examination.

It has been said that the French lights are superior to the British. Their sea-lights are no doubt excellent. They have kept pace with the improvements of the age; but it is doubted whether a considerable degree of superiority can be successfully maintained. The committee (Ibid., p. 31,) say the British lights are considered generic for the purposes they are intended for, and superior to the French lights, many of which are harbour lights, and, perhaps, small in number.

#### COMPARISON of American and French Lights in regard to

The committee are unable to give the reach of visibility of the United States. The limits of those which have been ascertained that they are, on an average, larger than the French lights.

Professor Paine, of Cambridge College, in 1838, made a survey in Boston bay and vicinity. (See House Report, Third Session, No. 187.) He says:—"I therefore feel myself warranted in deductions: that, in ordinary clear weather, our best lights, such as Scituat, &c., are visible from the mast-head of a square-rigged vessel; that our second class of lights, such as those on the point, the high light on Baker's island, and those on Plum Island, Ipswich beach, Squam, Marblehead, and Long Island, are visible from fifteen to eighteen miles."

Lieutenant Bache, in his report, to which reference has been made, gives the reach of visibility of fifteen lights, varying from nineteen to twenty-four miles. Of these lights, eight were of the third class reflectors; five of the second class, having fourteen inch reflectors, with eighteen inch reflectors. Mr. Lewis gives a statement of the lights of the first class, from Passamaquoddy to South Passamaquoddy, in November, 1839, ranging from fifteen to thirty miles.—(Senate Document, 1837—38, vol. ii., Superintendent of lights at Baltimore, gives the portées of two lights, ranging from ten to twenty miles, averaging fifteen miles.

Mr. Anderson, superintendent at Portland, Maine, says, that in that vicinity can be seen from twelve to eighteen miles. The lights seen at sea. Also, that twelve coast-lights in the same vicinity are visible from ten leagues.—(Ibid.)

It appears from a list of the lighthouses, published by the committee, that the average "reach of light" of seventy-six lighthouses (whose reach is given) is nineteen miles. The average "reach" of the lights (Neversink, Baker's island, &c.) is twenty-seven miles and a half.

The committee believe that the statements of average distance made by Professor Paine, is true in regard to all our lights.

The average reach of light of 170 British lights, as shown in the Hydrographical office, Admiralty, in 1832, is less than

average reach of six of their best lights (Needles, Beachy Head, Lundy, &c.) is twenty-eight miles and a half.

In comparison with the progress of improvement in the old world, our march in this, as in almost every other useful establishment, has been extremely rapid. In the comparatively short period of fifty years, we have built 276 lighthouses and boats. Since 1812, the useful effect of our lights has been nearly doubled, and the consumption of oil lessened by more than fifty per cent. For centuries before our existence as a nation, England and France had been commercial nations; but, up to the close of the last century, no improvement had been made in the quality of their lights. About that period oil was substituted for coal. At the close of the year 1812, we had forty lighthouses fitted up with patent-lamps and parabolic reflectors. At that time, both England and France had not ten houses thus fitted up.

It is believed that, when the improvements now in progress shall have been effected (in connexion with a proposed change in the mode of inspection) our system will be more efficient, useful, and economical than that of any other nation.

Forty-four collectors act as superintendents of the lights in their respective districts. By the act of May 7, 1822, their maximum compensation per annum is 400 dollars. Some four or five receive that amount; the others receive from 100 dollars to 200 dollars each, per annum. These superintendents are required to visit the lighthouses but once each year. Captain Howland, who is in the employ of the department, also visits them once in each year, and makes reports of their condition, &c., to the fifth auditor.

*Mode of Contracting for Building, Apparatus, and Oil.*—Since 1816, all the lighthouses and light-boats have been built by contract, invited by notice in the public prints. The contracts invariably have been given to the lowest bidder, having the ability to guarantee its performance. A suitable practical mechanic is employed to oversee the work constantly. Nothing is paid or advanced to the contractor until he obtains the certificate of the overseer, that the contract has been faithfully performed. In like manner, proposals for fitting up the lighthouses with lamps, reflectors, &c., are invited, and the contracts given to the lowest bidder.

By this mode competition is elicited, and, in the opinion of the committee, economy most effectually promoted. No losses can occur, as no advances are made until the completion of the work.

In the same way all the oil is procured. It is the interest of the contractor to furnish the best quality; for if found bad, he not only gets no pay for it, but is bound to take it back, and substitute the best quality. Actual experiment by burning is the only true test of the quality of oil. The oleometer will not prove it. The practice now adopted of taking samples from each cask and submitting them to the test of the lamp, cannot but insure the best quality. That oil congeals in cold weather is no proof of its badness. Oil pressed in winter, when the thermometer is at a given degree, will congeal whenever the thermometer falls below that degree. A stove and oil heater are the only remedies.

A vessel in the employ of the department is constantly engaged in visiting the lighthouses, supplying them with oil and other necessary supplies and having on board a mechanic to make all proper repairs to the lighting apparatus. Captain Howland, in 1840, 1841, on board this vessel, visited 155 lighthouses, from Maine to the Sabine, and put them in repair. As a proof that the oil furnished by the contractors is good, he found but 900 gallons of oil in all of them bad, and much of this was mere settlings.

It has been objected by some who arraign the department for want of economy, that the average consumption of oil in our lighthouses is less than that consumed in the British houses. This is no doubt true. But the committee do not perceive the justice and consistency of the rebuke, especially as it appears that our lights are more efficient than those of Great Britain. It is said that the average annual consumption of oil per lamp in England is forty-three gallons. From the accounts given by Captain Howland it does not exceed thirty gallons per lamp: showing an economy in the use of oil of more than forty-three per cent over the British lights.

It will be seen by the above statement, that the average expense of the British

floating lights for 1838 was 7660 dollars, and that the average floating lights, which, in general, are larger than the British, is it is asserted in the reports, "that the American floating lights purpose than the British, and that the lights are seen (whilst theirs to be seen about nine miles only) from ten to fifteen mile drawings of both nations, which is in the light department office, of the superior excellence of the American plan."

---

### CHAPTER XXXIII.

#### CURRENCY AND BANKING INSTITUTIONS OF THE UNITED STATES.

IF the rise and fatal consequences of the Mississippi of the South Sea delusion in England, afford lessons of it would act wisely as individuals, or to those who may be of active projects, and especially to those who are intrusted with legislative, affairs of a nation, we may assuredly refer to the "History of Currency and Banking" in America, for facts which ought to teach.

In reviewing the history of the Currency and Banks we shall confine ourselves to facts, to the opinions of leading Congress, and to statistical tables; and, we shall refrain from speculative theory for improving the American system, of currency and banking: leaving the history of facts, and of instruction.

As early in colonial history as 1690, a paper currency was issued, with the designation of bills of credit. For the redemption of which issued them pledged their property and revenues. sufficient, or, at least, plausible, security for maintaining the value of those paper bills were first exchanged. They might have been called Paper Currency of Expediency. Their nativity occurred in Massachusetts, was believed, the most religious of the colonies—Massachusetts was, at the same time, strange as it may appear, the most

A maritime expedition was sent, in 1690, from New England, attended, comparatively to the resources of the colony, with a small force. This expedition was placed under the command of Sir Wm. Phips, consisting of thirty-four vessels, and about 7000 men. The armament was small, and safety, and attempted to bombard that fortress. After twice the New England forces were compelled to abandon the attempt, and sailed down the St. Lawrence. Eight of the principal ships on board, perished in the Gulf. Montreal was at the same

attacked by land; but this design was frustrated by the defection of the Iroquois nations.\*

To discharge the liabilities to which the colonial administration was pledged, for paying the expense of this disastrous crusade—for it partook of the latter character—bills of credit were used by Massachusetts. The other colonies soon followed this very convenient example. Whenever an emergency arose, no expedient could have been more, readily, suitable to those who did not reflect on future exigencies.

The bills of credit, however, notwithstanding the colonial pledges, soon depreciated, and gave birth to that pernicious variety of currencies, that is to say,—the differences between specie and paper values, which has not yet disappeared in America. At first they depreciated, so far only as to constitute a *legalised* tender for the payment of taxes and debts in New England, at the rates of six shillings paper for a *Spanish* silver dollar; in New York, at eight shillings; and in Pennsylvania, at seven shillings and sixpence for a silver dollar. But the depreciation did not halt at these rates, especially in New England and Carolina.

In 1745, another expedition of a semi-crusade character,† was fitted out in Massachusetts against Louisburg. It was successful in capturing that fortress; but the expense demanded a fresh issue of from 2,000,000*l.* to 3,000,000*l.* in bills of credit, which were declared *lawful money*, and Mr. Pitkin states the depreciation in 1748 as follows, viz.:—100*l.* sterling in specie, or a bill on London, was equivalent in value to *lawful paper money* of New England 1100*l.*, of New York 190*l.*, of East Jersey 190*l.*, of West Jersey 180*l.*, of Pennsylvania 180*l.*, of Maryland 200*l.*, of Virginia 125*l.*, of North Carolina 1000*l.*, of South Carolina 700*l.*‡

Great Britain soon afterwards ceded Louisburg to France, greatly to the mortification, but certainly to the advantage, of Massachusetts: for the latter received from the British treasury about 183,000*l.*, on account of the expenses of the Louisburg expedition; and with this sum compounded for the redemption of paper bills. The composition was under two shillings in the pound sterling: for *fifty shillings* in lawful paper money, one ounce of specie money was given.

The war of American independence, like all modern wars, rendered indispensable the borrowing of money, and the issuing of paper bills of credit. Bills of credit were issued by Congress in 1775 to the amount of 3,000,000 dollars; large sums were added afterwards, and Mr. Pitkin observes,—“A depreciation in value was the natural consequence, although Congress made them a tender, in payment of all private debts, and declared a refusal to receive them to be an extinguishment of the debt itself. This depreciation began to be seriously felt,

\* Macgregor's *British America*, vol. ii., p. 140. Second Edition.

† See *Ibid.*, vol. i., p. 434.

‡ See also Hutchinson's *History of Massachusetts Bay*, vol. ii., page 436, *et seq.*

early in the year 1777; and increased with the increase of 1779, these issues amounted to 160,000,000 dollars; and that, on no account, should they ever exceed 200,000,000 amount were issued, before the close of that year; a sum redemption at par, and in the course of the years 17 entirely stopped circulation. Nor has any part of them except at one hundred for one, under the funding system of the present national government.

“ Soon after the death of continental money, at the instance of Mr. Morris, superintendent of finance, Congress established the name of, ‘The President and Directors of the Bank of North America.’ This institution went into successful operation in December 1781, with a capital of only 400,000 dollars, and under the management of it, and the aid associated with him, contributed, as far as its limited resources would relieve the financial distress of the country at that period.

The Bank of North America was not a chartered bank, but was created under an ordinance, agreeably to the articles of confederation. Its powers were too limited; and, although managed with judicious wisdom by Mr. Morris, it was unable to provide a circulating medium for the public. The war, during its continuance, had annihilated the value of American money, by preventing the importation of money, which would have produced much the same effects as the war. Trade languished after the war ceased, as the products of the western market, and consequently commerce, are never suddenly revived.

Several of the states resorted again to the colonial expedient of issuing credit, and of framing *tender laws*. Under the latter, sometimes made a tender for the payment of individual property being decided by appraisers.

On the adoption of the constitution of the United States, the tender of credit was abolished. Gold and silver were, alone, the tender, either for the payment of taxes, or of personal debts. It was prudent,—but it was embarrassing, when it was ascertained that in the medium there existed in specie only the savings of thirty individuals, who would not consider it wise, under circumstances, to risk the fruits of non-expensive habits, and of more than 2,000,000 dollars constituted the banking capital of the United Republic. This capital was invested in the bank of New York, in the city of New York; and, the bank of the city of Boston. It became absolutely necessary to create a new medium of exchange in emergency. Mr. Alexander Hamilton, a high authority

treasury in 1790. He boldly recommended the establishment of a national bank, under charter, to be granted in accordance with an act to be passed by Congress for the purpose. Washington was president. Both Jefferson and Maddison were, on constitutional grounds, strongly opposed to the projected institution. The power of calling into action the necessary and proper means of regulating the currency, undoubtedly vested in Congress by the constitution, was argued by the supporters of the national banks, as including the constitutional right to pass the law. Jefferson, Maddison, and others, who opposed the measure, contended that the meaning was restricted to *those means being absolutely necessary*.

It was opposed chiefly, on the ground that the government was restricted to the exercise only of those powers literally specified in the constitution; that the power to incorporate a bank was not specified as one of them; and "that the power given to Congress to pass all laws necessary to execute the specified powers must be confined to all the necessary means to accomplish the ends incidental to the nature of the specified powers. Upon the other side it was contended that incidental, as well as specified, powers belonged to the government; that where general objects were stated as within the province of the government, all the usual means necessary to accomplish those objects were incidental to them; and that a bank was a well-known, and usual, instrument for accomplishing the objects specified by the constitution." It was further maintained, that the power to incorporate banking institutions of any kind whatever was not among the enumerated powers, and that, "to go beyond the specified powers, prescribed by the constitution, was to take possession of a broad, undefined, and dangerous field of jurisdiction." The bank bill, however, was passed by the two houses of Congress, probably as much through the emergent necessity of regulating the currency, as from an absolute conviction of the constitutional right of Congress to pass a law for granting a charter of incorporation; but certainly not, until after its constitutional principle was argued with extraordinary ability in both houses. "It was also discussed on its constitutional grounds, with great and conflicting ability in the cabinet. The secretary of state and the attorney-general considered that Congress had *transcended its powers*; but a contrary opinion was maintained by the secretary of the treasury. After profound and able debates by his cabinet, the question was referred to President Washington, and he gave it as his deliberate conviction that the power was invested in the government by the constitution to incorporate a bank, and in conformity therewith the bank was established."\*

It was not, however, until February, 1794 that the bank of the United States, in its corporate form, began its operations. The capital of the bank was above ten millions of dollars, of which eight millions were to be subscribed by indi-

\* Kent's Commentaries, vol. i., p. 251.

viduals, and two millions by the United States. Two subscribed by individuals were to be paid in specie, and the 4th of March, 1811: during which period no other nation published. This institution was certainly beneficial to the to its stock-holders; for it paid them an annual dividend.

As the charter of the bank would expire in February, the secretary of the treasury, on the 3rd day of March, 1808, renewed the charter.

The general condition of the bank was stated by Mr. Gallatin as follows:—

Cr. I. Debts due to the bank—	d
1. Six per cent stock, remaining part of the original subscription	2,2
2. Loans to individuals, consisting chiefly of discounted notes, at sixty days	15,0
3. Due by banks incorporated by the States	8
II. Specie in the vaults	
III. Cost of lots of ground and buildings erected	
Total, Cr.	
Dr. I. Capital stock of the bank	10,0
II. Moneys deposited by government and by individuals	8,5
III. Bank notes in circulation	4,5
Total, Dr.	

Leaving a balance for contingencies of .

The secretary contended that this statement proved that the bank "had been wisely and skilfully managed."

Mr. Gallatin proposed that, on the renewal of the charter, the capital of the bank should ultimately be increased to 30,000,000 dollars.

The report was laid before the senate, and Congress. Various plans were brought forward the following year. The advocates, for establishing a national bank in the city of New York, and the charter of the bank of the United States was allowed to expire. It is alleged, as much as patriotism, prevented its renewal.

"The influence of state banks was also brought to bear on the subject before Congress; and, when it is considered that the number of state banks had increased to nearly ninety, located in most of the states, and that forty millions, their influence could have had no inconsiderable effect. Of views and interest against the bank, it is not strange that the bank should be suffered to expire." \*

\* Mr. Crawford, of the senate, as chairman of the committee on finance, reported to the senate, in December, 1811, a bill for the recharter of the bank. He stated that he had received twelve presses in these great states (referring to the states opposed to the bank) in twelve months past, teemed with the most scurrilous abuse against the bank, and that he had no doubt that the man who has dared to utter a syllable, in favour of a renewal of the bank, is a traitor to his country.

War followed, and the state banks furnished to the government the greater part of its loans, in order to carry on the war, and, at the same time, aided in the collection and disbursement of the revenue. Increased issues of paper, and the depression of commerce, occasioned the banks south of New England to suspend payment in specie. Depreciation followed, and the government raised loans, for carrying on the war, upon the most disadvantageous terms.

During the session of Congress of September, 1814, Mr. Dallas, then secretary of the treasury, submitted a plan for a national bank. He contended that its direct tendency would be to restore and continue an uniform national currency: declaring, at the same time, that this object could not be effected by the state banks. The nation had been labouring under the evils of a disordered currency, and Congress, it was believed, felt disposed to organise an institution that might, if possible, afford relief, and establish the credit of the country upon a solid foundation.

Mr. Dallas, secretary to the treasury, brought forward in the session which met in September, 1814, a scheme for a national bank, with a capital of 50,000,000 dollars, divided into 100,000 shares of 500 dollars each; three-fifths of the capital, 30,000,000 dollars, to be subscribed by corporations or, by individuals, and two-fifths, 20,000,000 dollars, by the United States. Of the subscriptions by corporations or individuals, one-fifth, or 6,000,000 dollars, to be paid in specie, and four-fifths, or 24,000,000 dollars, either in specie or six per cent stock, issued since the declaration of war, and in treasury notes, in the proportion of one-fifth of the latter, and three-fifths of the former. The subscription of the United States to be paid in six per cent stock; the treasury notes subscribed might be paid in public six per cent stock; and no part of the public stock, which constituted a portion of the capital, was to be sold, during the then existing war, nor at any subsequent time, for less than par; nor, at any time, to an amount exceeding one moiety, without the consent of Congress. The bank was to be bound to lend to the United States treasury 30,000,000 dollars, at six per cent interest.—*Pitkin*.

A bill was afterwards submitted to the house, nearly in accordance with the above plan.

Differences of opinion, however, were soon manifested, as to some of the principles on which such a bank would be established. These differences involved the amount of capital, and whether it should chiefly consist of six per cent public stock, then issued, or of treasury notes to be issued; whether the United States treasury should hold stock in it, and have a direction in its management; whether the bank should be bound to lend the government 30,000,000

dollars to give his opinion in favour of the renewal of the charter, is instantly charged with being bribed by the agents of the bank—with being corrupt—with having trampled upon the rights and liberties of the people—with having sold the sovereignty of the United States to foreign capitalists—with being guilty of perjury, by having violated the constitution."

dollars when required, and be prohibited from selling continuance of the war; and whether it should have payments.

Mr. Calhoun proposed "that the capital should consist of specie, and 44,000,000 dollars in treasury notes, to be sold at 10 per cent stock, and sold at 10 per cent; that the United States should not be a stockholder, or have any management of the institution; that it should not be bought by the government, nor have power to suspend specie payment; and in division, the bill was amended so as to embrace the views of Mr. Calhoun; and the capital was reduced to 30,000,000 dollars. The bill as amended did not meet the approbation of the treasury, and was negatived.

"Soon after this, a bill for a national bank, in accordance with the views of the secretary of the treasury, was passed by the senate, and contained a clause empowering the bank to suspend specie payment during the war, or one year after, there should be such a demand for specie as to produce a reasonable and probable belief that it was intended to endanger the specie capital of the bank, and of the country; or to withdraw it from circulation, so as to embarrass, obstruct, and discredit the government of the people and the government, as well as the bank itself; or the consequence of a wilful accumulation of bills of the bank, withdrawing the credit of the institution. The president of the United States was authorized to direct the bank to resume, or continue to suspend specie payment as he might deem expedient."—*Pitkin*.

The details of this bill again became subjects of serious discussion, and every attempt to amend the bill, so as to make it a more successful one, was unsuccessful.

On the third reading, a motion was made by Mr. Webster to refer the bill to a select committee, with special instructions, to amend it by striking out the provisions allowing the bank to suspend specie payment, making it obligatory on the bank to lend money to the government, prohibiting it from selling its stock during the war." In support of this motion, Mr. Webster pointed out the defects of the bill, as it came from the treasury, and the effects it must necessarily have on the credit and currency of the country. He said Mr. Webster, "can only be made by an immediate issue of bills. If these bills should return, the bank will not be able to pay till it has issued new bills to remedy this inconvenience, power is given to the directors, at their own discretion, the payment of their notes, until the president shall otherwise order. The president will give no such order, and the government will compel it to draw on the bank till the bank itself is exhausted. Indeed, whatever orders may be given or withheld, it will be for the bank to pay its notes. No such thing is expected till the government issues will be dishonoured on its return, and yet it will continue to do so long as the government can apply it, in any degree, to its necessities."

"What sort of an institution is this?" Mr. Webster asked. "It is a bank, and a department of government. It will be properly managed. Its capital is government debts; the amount of its issues is determined by government necessities; government, in effect, absolves itself from

and, by way of compensation, absolves the bank from its own contracts with others. This, indeed, is a wonderful scheme of finance. The government is to grow rich, because it is to borrow without obligation of repaying; and is to borrow of a bank, which issues paper, without liability to redeem it. If this bank, like other institutions which dull and plodding common sense has created, were to pay its debts, it must have some limits to its issues of paper; therefore, there would be a point beyond which it could not make loans to government. This would fall short of the wishes of the contrivers of this system. They provide for an unlimited issue of paper in entire exemption from payment. They found the bank, in the first place, on the discredit of government, and then hope to enrich government out of the insolvency of their bank. With them, poverty itself is the main source of supply, and bankruptcy a mine of inexhaustible treasure. They rely, not in the ability of the bank, but in its beggary; not in gold and silver collected in its vaults, to pay its debts and fulfil its promises, but in its locks and bars, provided by statute, to fasten its doors against the solicitations and clamours of importunate creditors. Such an institution, they flatter themselves, will not only be able to sustain itself, but buoy up the sinking credit of the government. A bank, which does not pay, is to guarantee the engagements of a government which does not pay! John Doe is to become security for Richard Roe. Thus, the empty vaults of the treasury are to be filled from the equally empty vaults of the bank; and the ingenious invention of a *partnership of insolvents*, is to restore and re-establish the *credit* of both."

The house divided, and the votes were eighty-one in the affirmative and eighty in the negative. The speaker, being opposed to the bill, gave his vote in the negative: the votes being equal, the bill was lost.

The bill was reconsidered the next day, and referred to a select committee, who soon after reported the same, with amendments, reducing the capital to 30,000,000 dollars, to consist of 5,000,000 dollars in specie, 15,000,000 dollars in treasury notes, and 10,000,000 dollars in stock of the United States, issued since the declaration of war, with a reservation of a right in the United States to subscribe an additional 5,000,000 dollars, payable in four per cent stock. Other amendments were also proposed by the committee, particularly by striking out the clauses relating to a compulsory loan, and the power of suspending specie payments. These amendments were substantially agreed to in the house, and the bill was passed by a large majority, 120 to 37; and was finally concurred in by the senate.

This bill was returned by the president, with his objections, not founded upon the question of constitutional power—a question which the president expressly waived, as being *fully settled*; but because, in his opinion, it was not calculated "to answer the purposes of reviving public credit, of providing a national medium of circulation, and of aiding the treasury, by facilitating the indispensable anticipations of the revenue, and by affording to the public more durable loans." The bill, not being *repassed* by two-thirds of the senate to which it was returned, did not become a law.\* A national bank, how-

\* In order to meet the expenses of carrying on the war, Mr. Jefferson recommended the issue, on the part of the government, of 200,000,000 dollars of paper money! Mr. Wharton, of Pennsylvania, in an ably written article on "Banking," observes:—"The suggestion of Mr. Jefferson was not adopted, but the principles involved in his scheme, namely, to carry on the war without disturbing the popularity of the administration, by the imposition of direct taxes—were attempted to be put in operation by the proposed establishment of a national bank. 'A bill,' says Mr. Gouge, in his excellent work, 'A History of Paper Money and Banking;' 'was got up in the senate to establish a bank with a capital of 50,000,000 dollars, of which 5,000,000 dollars were to be paid in coin, 15,000,000 dollars in six per cent stock, 20,000,000 dollars in treasury notes, and 10,000,000 dollars to be subscribed by government. In one paragraph, it was declared 'the said corporation shall be bound to lend the government, reimbursable at their pleasure, 30,000,000 dollars;' and in another paragraph, it was expressly provided, that 'until the first Monday in April, 1816, it shall not be obligatory on said corporation to pay its notes in specie.' Authority was also given to Congress to authorise, in certain contingencies, 'the suspension of specie payments, for such time or times as they may deem proper.'

This bill, it was observed, "which would have done honour to the repudiating legislation of Mississippi, or to the non-paying state of Pennsylvania," was passed, on the 13th of July, 1815, in the senate of the United States, by a vote of eighteen to sixteen.

ever, seemed the only resource left to restore public credit, & prosecute the war; the senate, therefore, immediately passed

"This scheme of paying the debts and the current expenditures means of taxation, but by incurring new liabilities—founded as it is on currency and banking, and still more unsound principles of morals—by Mr. Webster, at that day if not a leading member of Congress, c of them:—

"From this miserably conceived, but plausible and popular scheme alike repugnant to the principles of currency, of banking, and finance common sense, and the dictates of common honesty, so happily exposed and reprobation of the world; the country was only saved by the treaty with Great Britain, while the bill was on its passage through Congress. 'In the timely arrival of that intelligence,' says Mr. Gouge, 'very of the country from the curse of a national paper currency. If the members of his cabinet, had been allowed to take their own way, we should have had a bank with a paper capital of 50,000,000 dollars, issuing notes—redeemable in gold or silver—'

"The unsound and immoral principles embraced in this plan of administration of Mr. Madison, and while Mr. Dallas was at the helm, wholly ignorant, as his writings and his conduct have shown, of the principles of finance; or careless, if not thus ignorant of the mischievous consequences to those on which the legislature of Pennsylvania acted, at the great payments in that state, in 1839. The banks of Pennsylvania were ordered by the legislature, to continue in a state of suspension, and, by so doing on the condition that the state, which was deeply in debt and in danger of defrauding the shareholders of the banks, by exchanging its almost worthless debt, for the paper issues of those banks; for bank notes which, though depreciated, could be forced, as good money, on the creditors of the other states.

"In such a dishonest and foolish copartnership, both parties have lost nearly all their capitals, while the debt of the state in 1839, from about 30,000,000 dollars to upwards of 40,000,000 dollars, multiplying at a rate which will double its present amount in less than ten years.

"So in respect to the operative effects of the financial principle of Mr. Madison and his cabinet. If it had prevailed, and the war extended a few years more, on the war scale of expenses; the national debt, at the end of the war, instead of being 130,000,000 dollars, would have been five times, and perhaps more. It would, in any event, have required such a burdensome rate of taxation, as this nation have no practical knowledge of, and which might have led to repudiation—or, at any rate, the doctrine of nonpayment of debt—Congress and out of Congress, as both of them now are in some five or six years.

"Of the debt incurred during the war with Great Britain, full one-third of its revenue, the taxes and duties having been paid, as the cases, in the cheapest circulating medium, namely, in those bank-notes, depreciated in value. Secondly, their borrowings upon issues of stock certificates were received in the most depreciated notes in circulation, while the war was, after the conclusion of the war, paid in a sound and honest currency.

"But enormous as have been the direct and immediate expenses and of this country, considering their short duration—the indirect, or consequences, connected with wars and consequent upon them—have been burdensome; to say nothing of the political and moral evils, infinite in number and happiness of mankind, than can arise from any amount of war have ever occasioned.

"Of the economical effects of the wars referred to, between all our competitors—in which this nation only participated for a short time—the consumption of one of our greatest staples, cotton—we shall, in the facts that will demonstrate the truth of our assertion—a truth which is sustained, admitted, believed, and felt—and what is that truth? Why, the universal interests of this nation, and of other nations—limited even by the deration of pecuniary thrift—mean in comparison with other and his promoted by a continuance of peace; of peace not merely between nations—tries—but a peace among all the nations of the earth."—*Letters to C*

ance with the views of the secretary of the treasury; and which was sent to the house on the 13th of February, 1815, and would, according to Mr. Pitkin, have then passed, but for the arrival of the news of peace with England. "At the very moment when the question was to be taken on the passage of the bill, the mail arrived from New York, bringing a letter to one of the members, put in as the mail was closing, informing him that a rumour had just reached the city of a vessel's being at the Hook, bringing news of peace. The house, apprised of this, immediately adjourned without taking the question; and the next day the news being confirmed, the bill itself, on motion of Mr. Lowndes, was postponed indefinitely; and the subject of a bank was no further agitated during the remaining short period of the session."—*Pitkin*.

Mr. Wharton, of Pennsylvania, author of several articles on commercial legislation, observes with reference to the chartering (in 1816), of the new bank of the United States—

"Congress met on the 4th of December, 1815, and while, by the great body of the people, the relief to be experienced from legislation was rated at the highest pitch, the legislature itself entered into the field with an ardour and enthusiasm unprecedented since the formation of the government. The return of peace had produced a buoyancy in the hearts of the great mass of the population, which is only to be compared with that experienced by a crowd of boys, who, on a bright March morning, throw open the windows of their school-room, and discover that the frost has already begun to loosen its nets from the face of the earth. Men looked northwards, and southwards, and westwards, at the great and fertile tracts which had just been reclaimed from the hazards of border war; and, as the want of the ancient mechanist had been once supplied—as a base had been discovered on which should rest the lever by which a world could be moved, the only thing remaining was, that the lever itself should be constructed. The capitol was looked up to as the necessary shop from whence the machinery should issue. By Congress a bank must be chartered, whose influence should counteract the costiveness which had impeded the monetary circulation. To Congress was committed the task of removing, on the one hand, the national debt, and of cancelling, on the other, the existing taxes. Through Congress, not only the desolation which had followed a protracted war was to be remedied, but fresh and permanent springs of prosperity were to be opened. That wise and equal trust in personal industry and personal honesty, by which alone permanent prosperity can be insured, was forgotten, and the people rushed to the legislature for the production of a panacea which should restore the drooping energies of the land and multiply its resources.

"The tone and bearing of the new Congress was calculated to promote the popular expectation. The old lines of party demarcation vanished, and each interest, no longer checked by past professions or personal experience, was willing to enter with the fullest enthusiasm into the new plans of national aggrandisement. The old party leaders had retired from the stage, and in their place was found a generation who had known them not. There were but few members of either house who could date their legislative history to the days of the first president, and among them Mr. Rufus King, in the senate, and Mr. Randolph, in the house, were the only men whose parliamentary abilities equalled their parliamentary experience. The demolition of the federal party during Mr. Jefferson's administration, and the war enthusiasm under Mr. Madison, had gone a great way to destroy, in the minds of the statesmen who then rose into action, those restraints which party discipline or hereditary prejudice might have created. When we look over the votes of the thirteenth and fourteenth congresses, we are surprised to find that the old party landmarks are reversed, and that the nominal federalists are discovered battling against measures once deemed instinct with federalism, while the nominal democrats give their earnest support to plans at which the father of democracy shuddered. There was, in fact, a broad and defined boundary line between the statesmen of the revolutionary war, and those of the war of 1812. Ordinarily, the texture of the legislature preserves an aspect of uniformity from session to session, from the fact that though changes take place, they take place gradually, and that though new members must necessarily

arise, they appear, like fresh strands woven into a rope at intervals, to serve unbroken the continuity of the series. But, at the time received an instalment of young legislators, all of them about of them endowed with great ability."

On the 6th of December, 1816, a motion was made that so much of the president's message as related to a uniform currency be referred to a select committee; and it was ordered that Messrs. Macon, of North Carolina (who soon after was elected to the senate), Mr. Pleasants, of Virginia, Mr. Hopkinson, of Pennsylvania, Mr. Tucker, of Virginia, and Mr. Pickens, of South Carolina, be the said committee. To their charge was committed the subject of the message from Mr. Madison's message:—

"The arrangements of the finances, with a view to the re-establishment of a permanent peace establishment, will necessarily enter into the consideration of Congress during the present session. It is true, that the improved condition of the country will not only afford the means of maintaining the faith of the government, but will also justify an immediate alleviation of the burdens imposed by the late war. It is, however, essential to every modification of the financial system, that a uniform national currency should be restored to the community. The depreciation of the precious metals will, it is believed, be a temporary evil; but, rendered the general medium of exchange, it devolves on the government to provide a substitute, which shall equally engage the confidence and support of the citizens throughout the union. If the operation of the proposed measure to produce this result, the probable operation of a national bank will be found to be necessary, if neither of these expedients be deemed effectual, it may become necessary to alter the terms upon which the notes of the government (no longer regarded as a medium of credit) shall be issued, upon motives of general policy, and to regulate their circulation."

On December 25, 1815, Mr. Calhoun, as chairman of the committee, received from the secretary a letter both long and elaborate, containing a plan for a national bank, which was reported without amendment, of which the following is an abstract:—

- I. *The charter of the bank.*—1. To continue twenty-one years.
2. To be exclusive.
- II. *The capital of the bank.*—1. To be 35,000,000 dollars.
2. To be augmented by Congress to 50,000,000 dollars, to be distributed among the several states.
3. To be divided into 350,000 shares of 100 dollars each.
- 35,000,000 dollars; and to be subscribed—
  - By the United States, one-fifth, or 70,000 shares
  - By corporations and individuals, four-fifths, or 280,000 shares

Total	350,000
4. To be compounded of public debt, and of gold and silver	
of corporations and individuals, in the proportions—	
Of funded debt, three-fourths, equal to	262,500
Of gold and silver, one-fourth, equal to	87,500

Total . . . . . 350,000

The subscriptions of 6 per cent stock to be at par.

The subscriptions of 3 per cent stock to be at 56 per cent.

The subscriptions of 7 per cent stock to be at 106.51 per cent.

5. The subscriptions in public debt may be discharged at pleasure by the government, at the rate at which it is subscribed.

6. The subscriptions of corporations or individuals to be payable by instalments.

(1.) Specie, at subscribing—	dollars.
On each share, 5 dollars . . . . .	1,400,000
At six months, 5 dollars . . . . .	1,400,000
At twelve months, 5 dollars . . . . .	1,400,000
At eighteen months, 10 dollars . . . . .	2,800,000
<b>Total</b> . . . . .	<b>7,000,000</b>
(2.) Public debt, at subscribing—	
Each share, 25 dollars . . . . .	7,000,000
At six months, 25 dollars . . . . .	7,000,000
At twelve months, 25 dollars . . . . .	7,000,000
<b>Total</b> . . . . .	<b>21,000,000</b>

7. The subscriptions of the United States to be paid in instalments, not extending beyond a period of seven years; the first instalment to be paid at the time of subscribing, and the payments to be made at the pleasure of the government, either in gold and silver; or in 6 per cent stock, redeemable at the pleasure of the government; or in treasury notes, not fundable nor bearing interest, nor payable at a particular time; but receivable in all payments to the bank, with a right on the part of the bank to re-issue the treasury notes so paid, from time to time, until they are discharged by payments to the government.

8. The bank shall be at liberty to sell the stock portion of its capital, to an amount not exceeding —, in any one year; but, if the sales are intended to be effected in the United States, notice thereof shall be given to the secretary of the treasury, that the commissioners of the sinking fund may, if they please, become the purchasers at the market price, not exceeding par.

III. *The government of the bank.*—1. The bank shall be established at Philadelphia, with power to erect branches, or to employ state banks as branches, elsewhere.

2. There shall be twenty-five directors for the bank at Philadelphia, and thirteen directors for each of the branches, where branches are erected, with the usual description and number of officers.

3. The president of the United States, with the advice and consent of the senate, shall annually appoint five as the directors of the bank at Philadelphia.

4. The qualified stockholders shall annually elect twenty of the directors of the bank at Philadelphia, but a portion of the directors shall be changed at every annual election, upon the principle of rotation.

5. The directors of the bank at Philadelphia shall, annually, at their first meeting after their election, choose one of the five directors appointed by the president and senate of the United States to be president of the bank; and the president of the bank shall always be re-eligible if re-appointed.

6. The directors of the bank at Philadelphia shall annually appoint thirteen directors for each of the branches, where branches are erected, and shall transmit a list of the persons appointed to the secretary of the treasury.

7. The secretary of the treasury, with the approbation of the president of the United States, shall annually designate, from the list of the branch directors, the person to be the president of the respective branches.

8. None but resident citizens of the United States shall be directors of the bank or its branches.

9. The stockholders may vote for directors in person or by proxy; but no stockholder, who is not resident within the United States at the time of election, shall vote by

proxy ; nor shall any one vote as proxy a greater number entitled to vote in his own right, according to a scale of votes number of shares which the voters respectively hold.

10. The bank and its several branches, or the state bank shall furnish the officer at the head of the treasury department officers, in such form and at such periods as shall be required.

1V. *The privileges and duties of the bank.*—1. The bank shall be subject to the usual restrictions of a body corporate for such purposes, and the forgery of its notes shall be made punishable by law.

2. The notes of the bank shall be receivable in all payments unless Congress shall hereafter otherwise provide by law.

3. The bank and its branches, and state banks employed shall furnish necessary aid and facility to the treasury for transferring the public place, and for making payments to the public creditors, with or claiming allowances on account of differences of exchange, and for claiming allowances on account of differences of exchange.

V. *The organisation and operation of the bank.*—1. Subscriptions shall be made as little delay as possible, and at as few places as shall be deemed necessary. The commissioners may be named in the act, or appointed by Congress.

2. The bank to be organised, and commence its operations: the sum of 1,400,000 dollars has been actually received from the sale of silver.

3. The bank shall not at any time suspend its specie payments unless previously authorised by Congress, if in session, or by the States, if Congress be not in session. In the latter case the bank shall suspend its payments for not more than six weeks after the meeting of Congress, and no longer, unless Congress shall otherwise direct.

VI. *The bonus for the charter of the bank.*—The subscribers shall be entitled to a bonus for the profits of the bank, estimated the government for its charter. Estimating the profits of the bank in the advance in the value of its stock and the result of its business seven per cent, a bonus of 1,500,000, payable in equal instalments of four years after the bank commences its operations, might, unless otherwise considered as about four per cent upon its capital, and would be a premium.

On Mr. Calhoun, as the chairman of the bank committee, dissenting from the charter to the house, and supporting it after it was passed, though not much beyond thirty years of age, had been present in the house during the two preceding sessions; and from his freedom from those points of offence which so often disqualify a parliamentary leader, he had been selected by the administration on the bank question, but upon most of the remaining points Congress was directed.

There were objections to the bill urged, at the time, with regard to the establishment of the bank would in no degree favouring the paper of any one particular bank, state, or foreign, or below par, and that it was necessary to purchase exchange credit deductible, from actual calculation, that to buy at once a draft would cost no more than to exchange the depreciated paper in the institution. In either case the fifteen per cent depreciation would be since the bank did not lessen the difficulty, the argument in favour of exchange operations, was of no value."

It was agreed also, "that great danger would accrue from the responsibility of both president and directors. Great sums of money would ebb and flow through their hands, and it was to be feared that they would be abused. which in the strain of mercantile vicissitudes were presented, for abused. It was suggested that the directors should be salaried but so anxious was the house to pass a bill which would be acceptable to the holders, that the proposition found little support. As the day after the doubts felt by a few at first began to be more general, the bill was passed."

large minority which was found against the bill on its passage, exhibited the great reluctance of even the administration members to adopt in full the administration scheme.

"It was argued, in the third place, that all that the country wanted was to be left alone, and that it was most unwise to fasten upon her, for twenty-five years, a measure which was meant, and constructed to meet, a temporary emergency. The great exertions which the war had induced, had been succeeded by a state of lassitude and exhaustion; but was it just to suppose that such a state would continue, and to frame a system of stimulants, which must be used not only for the present, but for the future? If the country wants to be lifted up, apply the proper machinery for the purpose; but do not, after she is once upright, subject her to a continual upward strain. In the words of Mr. Hopkinson, 'In this young nation, with its vast resources and solid wealth, the remedies would come of themselves, in a great degree, if we have patience to wait for them.' The best policy, in such a case, is to let alone; to legislate, at all events, for the present and not for the future, and to trust much more to the active and permanent exertions of the people themselves, than to the insubstantial labours of their legislature."

On the appearance of the bill in the house, it was saluted by a series of amendments, the most of which were unsuccessful, and the bill was finally carried, and the charter signed by the president on the 10th of April, 1816.

The bank of the United States did not immediately commence business. It was considered necessary first to provide for the disordered state of the currency, and against future depreciations. A special agent was sent to Europe to contract for specie, 7,311,750 dollars value of which was, between July, 1817, and December, 1818, imported into the United States for the use of the national bank, at an expense of 525,277 dollars. Mr. Pitkin observes that—

"In addition to this expense, during the year 1817—18, a scheme of stock-jobbing was devised and carried on in the shares of the bank, highly injurious to the bank itself, as well as the public, in which some of the directors, and even some of those appointed by the government, were concerned.

"In this scheme, a large amount of the money of the bank was used, being loaned to those concerned in it, on pledges of the very stock purchased with the loan, at 125 dollars per share. In consequence of these profligate speculations, the price of shares, about the 1st of September, 1817, rose to 156½ dollars. The bubble, however, at last burst, and, in December, 1818, the price fell to 110 dollars per share.

"In consequence of this mismanagement, the bank lost between two and three millions of dollars; the loss at the office at Baltimore alone, amounted to 1,671,221 dollars; and the bank was unable for a long time to make dividends.

"On a change in its direction and presidency, the bank gradually recovered from its losses, and has since been managed in a manner, not only highly beneficial to the government, but greatly conducive to the interest of the community at large. In the course of sixteen years, this institution has collected and received in its vaults public money, to the amount of from three to four hundred millions of dollars; and this vast amount it has disbursed and distributed through the United States, in the payment, not only of the various ordinary expenses of the government, but the interest and principal of the public debt, and the numerous government pensions, &c.; and this has been done without the loss or expense of a single dollar to the government. It has also aided the government by temporary loans; and in this way, in one instance, saved the public credit. A large instalment, being the balance of the Louisiana debt, became due on the 21st of October, 1820, and was previously advertised to be paid on that day; but, in consequence of an unexpected defalcation in the receipts of the revenue, the funds of the government were insufficient to meet so large a payment. In this situation, the treasury department made application to the bank, stating that it 'had not the means of paying the balance,' at the time specified, and requesting it to advance the amount to the holders of the stock, or their agents, in such a manner as to save the public credit, and to satisfy the holders."

*The bank immediately complied with this request, and made s the credit of the public treasury.*

"That this institution, with its twenty-five branches loca union, has, in a variety of ways, essentially contributed to ad their present prosperous condition, no one acquainted with i entertain a doubt. It has afforded aid, either directly or indi manufacturer, and the agriculturalist; and thereby contribi the internal as well as external resources of the country. C which it was established, and which is of common benefit, has rendered and continued the currency as uniform as any curre be. The aids it has afforded the merchant and the manufact nishing facilities for foreign and domestic remittances, are known to be here noticed. Nor should it be forgotten, that nished the East India and China merchant with a credit in him the necessity of carrying so much specie to those distar has been thereby relieved from embarrassments, sometimes c mand of millions of dollars for exportation to those countries.

"In the message of President Jackson to Congress, in D the national bank, the message declared, that 'both the cons of the law creating this bank *are well questioned* by a large p and it must be admitted by all,' the message added, 'that it establishing *a uniform and sound currency*.' This declarati in the minds of all who had made themselves acquainted wit banking operations, and, particularly, with the effects produ on the currency of the United States."

The Senate and House of Representatives appoin report on this communication, and they expressed opi sition to those of the president.

On the 1st of January, 1833, the directors of the l vered to the committee of ways and means, a staten which exhibited

This statement being considered highly satisfactory, the funds of individuals as well as of the government, continued to be intrusted to the national bank; and the price of its stock was a proof of the confidence in its condition and management. In loans and discounts, by the actual distribution and application of its capital, the southern and western states, that is, the states south and west of Philadelphia, had received an amount exceeding 43,000,000 dollars, in May of 1832, which were then in circulation. In the states bordering upon the Mississippi and its valleys and streams, it had exceeded 30,000,000 dollars, of which, nineteen or twenty were in discounting promissory notes, and the remainder was composed of discounts of bills of exchange, foreign and domestic.\* President Jackson, in his message, December, 1832, not only called in question the constitutionality and expediency of the bank, but also its solvency. In 1833, the treasury withdrew from the bank 8,000,000 dollars, within a fraction. The national bank and the state banks curtailed, at the same time, the amount of credit upon which the business of the country was carried on. Property declined in value. Innumerable failures occurred in consequence of the want of bank accommodations. Those which stood, maintained their credit only by enormous sacrifices. Public works and private enterprises were arrested. The means of labour were cut off from those who most required it, and a general pecuniary distress seemed to pervade the country.

"When it was finally settled," observes Mr. Lawrence, in an article on banking in the United States (1844), "that no re-charter of the national bank was to be obtained, a plan was projected to combine the advantages of the long established correspondence, name, and machinery of the former bank, by incorporating its stock with a new institution, under the name of 'The President, Directors, and Company of the Bank of the United States of Pennsylvania,' which was chartered on the 18th of February, 1836, by the legislature of that state. The transfer of the funds of the old institution was made into the new state bank.† More than fifteen per cent was restored to the government, beyond its subscription, at the period of the transfer; and three and a half per cent had been paid to the treasury every six months, for a long course of years. In consequence of the advantages to be derived from the new state institution, the stockholders were content to subscribe anew in the state bank; and it is alleged that all of them might, at this juncture, have received their investments back, not only at par, but with a large advance. This the government actually did; and no power was possessed by the government, that was not equally enjoyed by every individual. Indeed, it was alleged by Mr. Nicholas Biddle (who had held the administration of the affairs of the state bank, as he had done that of the national bank), as recently as April, 1841, that the state

\* Pitkin's Statistics—Webster's Speeches; vol. ii., p. 100.

† Mr. Pitkin observes: "The removal of the public deposits, from the vaults of the bank of the United States, produced a general distrust and want of confidence, not only in the moneyed concerns of the banks, but of individuals; and for a time occasioned such a derangement of the great money transactions, in their infinite ramifications, as to cause great pecuniary distress, throughout this extensive country. To a superficial observer, the cause appeared inadequate to the effect; not so, to those who had observed similar effects, even from slighter causes, in commercial countries, where credit was the basis of their various moneyed operations.

"Had the Chancellor of the Exchequer, in Great Britain, by royal mandate, removed the public money from the vaults of the Bank of England, who can doubt, that it would have produced, for a time in that country, such a distrust, panic, and pecuniary distress, as it had never before experienced."—p. 457.

We do not propose here to enter into a discussion that have been urged on the one side and the other bank. Since the expiration of the last national bank, in which passed both houses of Congress, was vetoed by another bank bill, passed by both houses, was presented by President Tyler. The question, however, of a national bank has been the source of more party discussion, of late years, regard to the general principles which should regulate paper, Mr. Webster, in June, 1844, in a speech delivered the following opinions:—

“Gold and silver are the universal standard of value, among all civilised nations. All the coin in the world belongs to nations in the world, each having naturally a share of it, for business and use. If bills of exchange were unknown, then from country to country, in order to pay debts and settle trade should have created such balances, on the one side universal solvent of commercial balances, the general payment square accounts, arising from the interchange of commodities becomes debtor to produce imported, coin must pay the difference throw a credit over import, coin returns to adjust the account the order of things, as is the procuring of a farmer, who goes to produce on his farm, and with money in his pocket, if he has to sell, or buying home more money, if his sale exceeds

"But in the intercourse of nations, there are things which affect the simplicity of this proceeding, and render it a little more complicated, without changing its nature. The use of bills of exchange is universal. Bills of exchange prevent, in a very great degree, in a settled state of trade, the actual transmission of coin from country to country. They run the round of the whole mercantile world, bringing nations to a settlement, each one with all the rest, one paying its debts to another, by drawing on its funds in the hands of a third, and leaving coin to be called for, only where balances of debt are considerable, or appear to be accumulating at some one point. London may be regarded as the centre of exchanges for Europe, and the city of New York, for this country; Paris, Hamburg, and Amsterdam being auxiliaries to London; and Boston, Philadelphia, Baltimore, Mobile, and New Orleans, auxiliaries to New York.

"The state of exchange, then, at any time, between New York and London, shows substantially the state of trade, in the aggregate, between this country and Europe, and the balances actually existing, or soon to arise, on the one side or the other. Speculations founded on calculations respecting future events, such as the probable amount of the staple articles, for the year, or the results of manufacturing industry, the probable rise or fall of prices, and other such things, affect, to a certain degree, the actual rate at which bills of exchange are bought and sold, and thus qualify that which would otherwise be the mere result of facts, with more or less of the influence of opinion. Still, the general and the safe index of the state of trade is the state of the exchanges.

"To an accurate understanding of the subject, however, it is necessary to bear in mind that the nominal exchange between the United States and England does not correspond with the real commercial exchange; by reason of the difference which the laws of the two countries have established in regard to the value of gold, and of the incorrect estimate, usually made here, in the business of exchange, of the value of the pound sterling. In exchange the pound sterling is received at 4 dollars, 44 cents; its real value may be put at 4 dollars 80 cents, and so the laws of Congress regard it. This difference amounts to eight per cent. So that when a bill of exchange is bought in New York, payable in London, in sterling money, if the premium given for it do not exceed eight per cent, it is really purchased at about par; and in this state of exchanges there is no danger of the export of specie.

"Gold and silver, as I have already said, constitute the standard of value, and medium of payment among nations. The same is true, in effect, in domestic trade, and among individuals. But here comes in the modern use of bank paper as the representative of gold and silver, which supplies the place of coin, and almost supersedes it in domestic transactions. Most commercial countries authorise the circulation of paper, and this circulation is greater or less, according to circumstances, and to the habits of the people. In the United States and England it is large, in France it is less.

"I am not now speaking of government securities, irredeemable treasury notes, or any thing of that kind; I am speaking of bank notes, promising payment in specie on demand, and circulating as cash. In the United States such bank notes are issued by many hundred different banks. They pass from hand to hand, as money, and little gold and silver is seen in the daily business of life. This state of things is convenient, so far as local circulations are concerned, and while the use of paper is restrained within just limits. But then comes the question, what are the just limits, and who is to preserve them? What is the standard by which we are to decide the question of excess, or no excess? and who is to support the standard?

"Is there, or is there not, or may there be, or cannot there ever be, excess, so long as the banks are able to redeem their paper? What do we mean by excess, or over issues, or injudicious superabundance of paper?

"To answer these questions, we must remember that the true operation of bank paper is of a representative character. It represents coin. But this representative, like other representatives, sometimes forgets its constituents, and sets itself up to be somebody or something; when of itself, it is nobody, and nothing. The one dollar bill which you have in your pocket is no better than blank paper, except so far as you have confidence that it will, whenever you wish, bring a dollar into your hands.

"A bank note, professing to represent coin, and being a true representative, acts as

respectable part in the drama of commercial affairs ; but what offers itself in an independent character, it only 'presents'. The security of paper, first against the insolvency of banks, general evil of over-issues and inflated circulation, consist in direct relation between the amount of paper and the gold and silver. I do not, of course, say a relation of equality, but a just relation. In other words, I mean to say that when the course of trade in a country, then the amount of circulating paper should be proportioned to the amount of gold and silver.

" Bank notes will not pay foreign debts. Strangers will not take them. They cannot judge of his credentials, and, therefore, they will not take the constituent itself. Here, I think, lies one of the great evils of paper. Then trade is such that balances are rising and falling, and the exportation of specie commences. There are those who allow of the paper circulation to supply the deficiency, and to keep the amount of paper issues under such circumstances, is the first cause of commercial distress and revulsion. The country is full of enterprise. Almost every man is active, while, at the same time, the capital is less abundant than in older countries.

" These circumstances keep up a demand for loans at all times of activity ; and although it is doubtless true that a large paper circulation may, to some extent, act as an expansion of credit, yet useful in a new country, yet men are too apt to delude themselves with the paper is currency.

" But I am now considering mainly, paper currency as it affects upon importations, and other branches of foreign trade, and discounts.

" An opinion has prevailed, in England, and I suppose it is in banks to discount every good bill of exchange or promissory note is business paper, as it is called ; that is, if it has been given for buying and selling. This has been, heretofore, the rule with the banks.

" Now, if by this, no more were meant than it might be so far as its own interests are concerned, to discount all such paper may be admitted. Business paper, generally speaking, may be so that all good business paper may be discounted by banks, and promissory notes, without danger of injury to the public from an excess in the proposition which I do not admit, and which I think of danger. I am persuaded that enlightened bank directors, disposed to regard the interests of their own stockholders, can never act on such a principle.

" It is a fundamental error ; and in a country so full of enterprise and activity as ours, its practical tendency is to stimulate business prices unnaturally, to cause overtrading, over production, and over-partments of business. It swells the amount of paper beyond what is necessary, and exposes the country to sudden revulsions. While specie is abundant abroad, it is the effect of this shallow and short-sighted policy of paper circulation at home. How can such a course of things terminate in distress ?

" We are now just recovering from a deep and long-continued depression of business give evidence of revival and of healthy action ; we shall not be content to make haste slowly ; that a spirit of confidence out of our state of prosperity when it shall become flushed. It will be issued to excess, prices become extravagant, and the result will be before we are aware. All this may not happen ; but the result not happen lies in this, viz. :—that bank issues be kept with reference to the amount of gold and silver.

" Let me illustrate my meaning by a supposed case. Suppose the banks of New York to be five millions. Suppose them to issue three millions for one, that is to say, fifteen millions. I do not say a just proportion, but it may be assumed, for illustration.

" Now, suppose the holders of one of these fifteen millions demand specie for it, for exportation. Then fourteen millions of paper remain resting on a basis of four millions. If a second million of specie be called for, then thirteen millions of paper rest on three millions of specie, and so on. Now, it is evident that if such a process as this begins, and threatens to go on rapidly without contraction, general distress, and perhaps explosions of the banks themselves, would be the inevitable and immediate consequences.

" This catastrophe, and the tendency of things toward it, is to be guarded against by just restraints upon the amount of discounts, by waiting the course of trade, and observing continually the index of exchange. It is not sufficient guard to look at the supposed responsibility of paper offered for discounts, or to inquire whether it arose in any case from real transactions of sale and purchases. If the exchanges indicate that exportation of specie may be apprehended, more caution is necessary; and when exportation ordinarily commences, it should be met by an immediate and corresponding diminution of the paper circulation. This will slacken that exportation, check it, and finally stop it. The process may be inconvenient for the moment. It may more or less depress prices, and dash men's hopes a little. But it is infinitely better to meet the occurrence by its proper remedy in the beginning, than to attempt to hold up against the natural course of things, to maintain trade in an artificial and forced state, tending every day to a final, ruinous, and overwhelming fall of prices, and to a general prostration of credit.

" That which every branch of industry in this country most needs, is reasonable and steady, not extravagant or fluctuating prices; sudden changes deprive men of employment, and distress families.

" Steady occupation, with reasonable gain, constant markets, with fair prices, with no apprehension of sudden change, and the security which a man feels that that is money which he has taken for money, freedom from alarm and panic, and no fear of disorder or violence; these things compose the elements of general and enduring prosperity among the industrious and producing classes of the community.

" In the present state of things, in the absence of all oversight by government, the continuance of the public prosperity very much depends on the banks themselves. Subject to no control but their own discretion, they ought to feel responsible for the exercise of that discretion.

" The great cities near to us, and other great cities, the sources of a great proportion of bank paper, are jointly called on to guard the country against such evils as it has already more than once experienced.

" There ought to be an understanding among the leading institutions, and a just disposition to discountenance everywhere either extravagant lending or extravagant borrowing. I do not presume to admonish the banks; but I hope they will receive these suggestions as made in a friendly spirit. If discretion and candour in this respect be not exercised, our present state of health will itself bring on disease; our very prosperity will plunge us in disorder. We are well instructed by experience—let us not be lost to experience. Let not all the good, all the comforts, all the blessings, which now seem in prospect for all classes, be blighted, ruined, and destroyed, by running into danger which we may avoid. The rocks before us are all visible—all high out of water. They lift themselves up, covered with the fragments of the awful wrecks and ruin of other times. Let us avoid them. Let the master, and the pilots, and the helmsman, and all the crew, be wide awake, and give the breakers a good berth."

Two prominent parties have arisen in the country, the one advocating the charter of a bank, on the ground that such an institution is constitutional and expedient, and the other opposing it upon opposite grounds. If we trace the political history of the national banks of the country back to the early controversies which have arisen upon the subject of their establishment, we find that the discussions have not always been made strictly party questions. The bank of 1791, as has been seen, was established under the auspices of President Washington, and was at that time deemed by him constitutional. The refusal of Mr. Madison to sign the bank bill of 1811, appears to have been founded in honest doubts as to its expediency, and the bill of 1816 was passed into a law with his approval. The vetoes of some of his successors seemed to have been based upon its alleged in-

expediency and unconstitutionality. It would seem that Supreme Court has fully set at rest the constitutionality of expediency, of course, must depend upon various considerations of structure and operations.

During the existence of the charter of the late banks multiplied in the respective states with reckless adoption of the constitution of the United States existed, and their aggregate capital amounted to no more than about 430,000,000. On the 1st of January, 1811, there were eighty-eight, with an aggregate capital, real or fictitious. Between the 1st of January, 1811, to 1815, 120 new states were admitted, with a presumed capital of 40,000,000 dollars. The secretary of the treasury, Crawford, estimated the paper circulation of the country at 99,000,000 dollars, and the specie circulation at 11,000,000 dollars. Loans to the government of the banks of the middle states during the war; and the most part, in bills, the issues must, through that means, be increased. The pressure before September, 1814, caused the payment of specie for their bills.

The rapid depreciation of their bills was the natural result of the bank of Baltimore were at a discount of twenty per cent; the banks of the city of New York, of ten per cent; and in 1815, the discounts at Baltimore were twenty per cent, per cent. In consequence, the revenue was paid in bills, and loans could only with difficulty be procured by the government. In February, 1815, restored confidence in the state banks, and resumed specie payments. The depreciation of their bills due to the United States, as well as those due for the transportation after the peace, could only be paid in those bills. And silver, it is true, constituted the only legal tender of the first bank expired; yet necessity compelled the creditors to receive depreciated bills in the absence of specie. In consequence of this disordered state of the currency, it was the duty of the secretary of the treasury, to make payments in the various states; and efforts were accordingly made to unite the specie payments, but without success. The bills received in payment of the revenue, were of unequal value. When the bank was re-established in 1816, measures were adopted to bring the new legal currency of the union; Congress instructed the treasury to receive nothing in payment but the legal currency or notes of the national bank, or notes of banks that were

\* *McCulloch v. State of Maryland*, 4 Wheat

mand. In 1817, an arrangement was agreed upon between the bank of the United States and the state banks of New York, Philadelphia, Baltimore, and Virginia, which enabled those banks to resume cash payments.

From 1811 to 1830, no less than 165 state banks, possessing an aggregate capital of about 30,000,000 dollars, either failed or discontinued their business; those failures occurring in nearly every state and territory of the union. The treasury had about 1,400,000 dollars deposited within their vaults: the greater portion of which it lost; while the loss to individuals was that of many millions,—the bulk of which fell upon widows and orphans, whose property had been intrusted to those banks. These failures arose in some cases from the multiplication of banks in places where they were not required; from injudicious discounts and over issues; from ignorance of the principles of banking, and the nature and operation of banking institutions; and, in some cases, from a desire of gain, at the expense of individuals and of the public.

In a recent letter written by Mr. Hamilton, of New York, on the subject of banks and the currency, and in which he proposes the creation of a state bank of issues, and the restriction of private banks to circulation, discounts, and deposits, addressed to the Legislature of the State of New York, that gentleman observes:—

“ In the project I am about to suggest, there will, perhaps, be found no other commendation than an attempt to reconcile the ultra speculations of an exclusive metallic currency with one of a representative character, based on absolute responsibility, convertible into specie.

“ It may be asked why any effort should be made, at the outset of an experiment (the new banking law of New York), the advantages or defects of which could not have had an opportunity for development, that a project, essentially changing the whole system, should be brought forward. I, however, contend, inasmuch as the general banking law is only on trial, it is the duty of the legislature to have in view some substitute in the event of a failure, and not be taken entirely by surprise at the moment of embarrassment. In the present experiment, there is nothing of real novelty, except it be the extraordinary fact, that government has relinquished the control over one of the most delicate attributes of sovereignty,—the power to create money, and that, to an unlimited extent.

“ The door has been thrown wide open for the issue of a paper currency; the old system and the new are in full operation, each dependant on the other for permanent existence, while, in fact, in their action, the several banks are heterogeneous, antagonist, independent. There are no two institutions having a common interest, and none governed with reference to the public welfare. The polar star of each is profit; this is the guide, aim, and object of private banking, and the legitimate pursuit, when restricted to honourable and honest operations. It is, nevertheless, equally correct, that, while these associations ought to be unlimited in the use of their capital, and its intelligent employment, they should never be intrusted with a power which, if abused, may shake the national prosperity to its foundation. Is not the reason as powerful now as at the recent crisis it was represented to be, that one of the chief causes of the embarrassment resulting in a suspension of specie payments, was the existence of an *inconsiderate multitude of currency purveyors*? If so, what is to be the influence of our general banking system? Does it tend to curtail or to expand the difficulty; or, has it, by some new light, been discovered that the paper medium is more stable in proportion to the sources of its creation? There is now no check to the creation of these money mints; any body and every body, with or without character, has a right to enter the fair field of competition. The

amount of corporate bank capital has no limits, and for the wane of the currency will prove equally redundant. The whole wealth of the country, its genuity, contrivance, and chicanery, will soon be monopolized by money creating concerns; every species of disguise will be no less contemptible than the miserable trick of that respectable and Hudson, of issuing notes payable on DEMAND, six months conspicuous letters, the residue scarcely legible, a fraud without the gratification of a successful imposition on the unwary.

"It is not in the state of New York alone that the fascination is to be experimentally essayed; the speculative example has the anomalous absurdity of unrestrained paper issues is preventing full effect to the scheme will be as varied as the circumstances shall dictate.

"Entertaining these views, I am induced to suggest a reformation of our banking system, which, although radical, as it curtails the power of the banks, is nevertheless essentially established on the knowledge that have heretofore, in a different shape, proved so successful for the progress of our great national prosperity. The project I propose to discard, as far as is compatible with prudence, a feeble expedient has, unfortunately, in some measure become identified with our fiscal economy. In my estimation, it would be absolutely injurious, altogether to repudiate a paper currency, if such a measure is, notwithstanding, imperatively important that the public should be governed on this subject. The superintendence of a powerful money making, ought not, in the very nature of its operation, to be in the exclusive hands of individuals. The value of no man's property of a community, should ever be placed at the capricious will of speculation. To effect a permanent change, the private banks should be brought into any intelligent knowledge of its pecuniary responsibilities.

*"In order to effect this object, and at the same time preserve the integrity of fiscal operations, the legislature ought to establish a state bank, and simultaneously convert the private banking associations into simple banks, and deposit."*

"In referring to the report of the secretary of the treasury, it will be found that there were in 1830 about 320 banks, with a capital of 145,192,263 dollars, with a circulation of 61,324,000 dollars. These were increased to 973 banks, with the immense capital of 324,000,000 dollars, a paper circulation of 185,782,506 dollars; to which the state added one year, under the general banking system, prospectively added 100,000,000 dollars of capital.

"If we compare our condition with that of Great Britain, we find a most extraordinary contradiction. The national debt of this country is eighteen times larger than the entire public indebtedness of the United Kingdom. According to official statements, the amount of our public stocks, exclusive of treasury notes of the federal government, are estimated at 1,000,000,000 dollars; the sum due by Great Britain is about 3,600,000,000 dollars; our paper circulation does not exceed 140,000,000 dollars, while the British exceeds 190,000,000 dollars. What must be the conclusion? Does it not exhibit an inconsistency fatal to the permanency of the system? The solution of the enigma resolves itself into the fact, that in our country, we expand an artificial currency without increasing the wealth of the public.

*"In the event of a renewed embarrassment, it is to be hoped that the government will be able to meet the emergency."*

*pursued by the banks in the spring of 1837 may not be re-enacted. The commercial community will not again submit to be annihilated; there will be no discrimination between banks and merchants, the whole will be involved in a common chaos."*

Mr. Henry Lee, of Boston, in his forthcoming work, "Letters to Cotton Manufacturers" (parts of which he has kindly forwarded to us), exposes, with great boldness and ability, the banking systems on which the majority of the banks of the United States were conducted. He contends that they have been founded and conducted on much the same principles as those inculcated and acted upon by Mr. Law, in France.

"The banking and currency hallucination," says Mr. Lee, "which extended through all the states at the period in question, was hardly less general, though perhaps much less violent, than the illusions which prevailed on the same subjects in France, during the banking operations of John Law, spreading as they did to England and Holland, where they produced effects similar to those experienced in the former country. In this country, the effects of managing the currency on principles similar to those of Mr. Law did not exhibit themselves so suddenly, and in such a destructive, such a terrific form, as they did in France, but, from their more frequent recurrence, and much longer duration, the practical operation of those principles has been infinitely more disastrous in their moral as well as economical consequences to the people of these states, than were produced in France and the neighbouring nations by the operation of the schemes of Mr. Law. Nor have there been in this country, as there was in France, any compensating effects experienced from the dreadful evils we have endured by a renunciation of the unsound, impracticable, and dishonest principles of currency and banking which have led to all our monetary embarrassments, difficulties, sufferings, and immoralities.

"In France, the historical record of the ruinous effects of Mr. Law's Mississippi scheme, and of his bank projects and bank bubbles, and the later and fresher reminiscence of the revolutionary *assignats*, have taught that intelligent nation valuable lessons on the subjects of banking, currency, and financiering, from which they have profited by the establishment of a permanently sound and practicable system. To the issue of those *assignats* the nation was driven, as it were, by the outbreak of a terrible revolution, the reaction of centuries of bad government, and whose convulsive and frenzied movements threw into a state of disorder and mismanagement, which continued for a considerable period of time, all the functions and powers of government under the various forms it assumed. In that difficult and distressing emergency, the French government resorted for relief to the use of an unlimited issue of paper money, which was forced, in its various stages of depreciation or worthlessness, upon the people of that country by the severest enactments of government. The people of this country, in their national capacity, resorted to similar expedients for relief, or for salvation in the difficult and trying circumstances in which they were placed at various periods of our revolutionary struggles for national independence.

"No such apology as we have suggested in favour of the French nation in the issue of their *assignats*, could be offered in alleviation of the criminal conduct of Mr. Law and the government of France who encouraged his scheme, and co-operated with him in promoting its success. The basis of Mr. Law's project for creating wealth was *confidence*—not confidence resting on a just and solid foundation—but having for its sole support a fraudulent reliance on the gross ignorance or the blind credulity of one portion of the nation who were to be its victims, and the base unprincipled cupidity of a smaller but more intelligent portion, who expected to profit by it. The means by which this stupendous fraud was practised upon the country, independently of the ignorance and credulity of one part of the nation, and the dishonesty of another portion of it, were derived from the unjust and arbitrary acts and decrees of the government. But, although the government, aided by speculators, gamblers, sharpers, ruined courtiers,

and other venal and unprincipled men, who expected to see financial disorders caused by Mr. Law's nefarious contrivance, it was beyond their ability to prevent its explosion, or to see it spread over the whole country, many of those persons were instrumental in its inflation.

"The proposed purposes of Mr. Law's plan of financiering enable the government to pay its debts without taxing the people; a man in France to augment his property to any wished-for extent by unlimited issues of paper money, by multiplying the *signs* of wealth as equivalent to a corresponding augmentation of *wealth*—to the *thing* itself,—the *shadow* of a substance as the *substance* is by increasing those *signs* of wealth, in the form of paper money, to an existing amount, or in any other given ratio, the wealth of a country in a corresponding degree. Having given these fallacies to the minds of the people of France, an appearance which they stole from the great mass of the American nation,\* there was no fulfillment of the designs of Mr. Law, and of the government which went with, and in support of, the designs of that unprincipled, or

"The system of banking and currency on which we have been acting, is based, in a considerable degree, on the erroneous operations of Mr. Law. It is true that, theoretically, there is no similar abuse of the money-making power; but, practically, the result has been a benefit to the country. The revulsions in business, resulting from an overflowing or of an insufficient currency, have become more violent, more ruinous, and more enduring in their consequences, and have consumed our banking capital, and extended the number of our circulating medium of the country.

"The managers of the banks, then, if they have learned their lesson, it has only been evinced, first, in their increased boldness of departure from the true principles of banking, and secondly, in their wider departure than formerly from the true principles of banking.

\* Mr. Gallatin, in his "Considerations on the Currency and Finance of the United States," 1831, makes the following remarks upon the erroneous notions of the nature, uses, and effects of paper money. "Some persons are yet found who contend for issues of paper money to an indefinite amount, without principle, that the demand is for value, and that it is impossible to issue beyond certain limits, without producing a corresponding depreciation; to that principle is sufficient to dissipate the singular illusion advanced.

"After having tried to discover what was meant by those who contend for excessive issues of paper money, we have found nothing but assertions on which the famous Law attempted to build the stupor, and desolated France in the year 1720. He asserted, first, that paper money was the representative or the sign of wealth; secondly, that paper money was as precious as the precious metals; thirdly, that by doubling or trebling the amount of issues, the value would be increased to that amount; fourthly, that such increase of the rate of interest, and thereby promote industry. It is hardly necessary to say that all these are a series of errors. The precious metals are not merely the sign of wealth, they have an intrinsic value, on account of the cost of their production, and other uses than currency, and are, therefore, wealth itself. It is not the sign, and comparatively stable value, that they have become the standard commodity, or, according to Law's vocabulary, the representative of wealth; the quantity of those signs is necessary for a circulating medium; but it is not more to the wealth of any country than the intrinsic value of that commodity.

The mistaken views in reference to the qualities and uses of paper money, which Mr. Gallatin commenting in 1831, have been signally manifested, since that period, by the 901 banks that were at one time in operation.

the evils have come upon the country which always flow from the mismanagement of a currency, in the increased dexterity that has been shown by those gentlemen in not only escaping the blame justly imputable to their ignorance or their imprudence, but of diverting public attention and public dissatisfaction from consequences wholly due to their acts, and to the principles on which they act, to the agency of other causes having, in reality, little or no connexion with the operations and the results of banking.

"In these remarks upon banks, we refer generally to the conduct of the eight or ten thousand *manufacturers* and *managers* of the currency of the country. That there are some honourable exceptions we cheerfully and gladly admit; but they are too few in number, and too divergent in their principles and practices of banking from the popular notions current in this quarter, and in every quarter of the country, to exercise any beneficial power or influence over the general banking concerns of the nation.

"The loss of a considerable portion, if not the entire capital of a bank managed on the principles of banking current among us is, sooner or later, one of the natural consequences flowing from the operations of these principles. If, in the midst of the frequent and violent revulsions in trade, with which the country is periodically afflicted, and which we shall continue to experience on the present system of banking, the capital of a bank is unimpaired and productive, it must be owing, either to fortunate accidents, or, what is more probable, to the circumstance of its being governed by men who, in spite of their *bad principles*—we use the term in an economical sense—have exercised a degree of prudence and skill, which have counterbalanced the usual and natural effects of the unsound and pernicious system on which their concerns are conducted.

"The popular notions of banking, then, generally entertained throughout the country, are in accordance with those acted upon in France by John Law; namely, that, by augmenting the *money* of a country, you increase the *wealth* of a bank.

"In Philadelphia, on the occasion of a third suspension of the banks of that city, within the space of a few years, there was a meeting of the '*friends of equal rights*,' at which, among other proceedings, the following propositions, relative to the rights of property were advocated, and unanimously adopted:—

"Resolved,—that the constituted authorities of the commonwealth are fully competent to support the institutions of the state created for banking purposes, in a liberal and proper exercise of their appropriate functions; and one of the chief of those functions is to furnish a circulating medium resting upon the confidence of the community, as much as upon the specie in the vaults and other assets of the banks for its use; and that all legislation calculated to strengthen and support such institutions in that particular, shall have our co-operation and confidence.

"Resolved,—that in order to enable the banks of the city and county of Philadelphia to be of service to the community in the present crisis, we would respectfully recommend to the legislature a repeal of those provisions of the existing laws, by which their charters may be forfeited, or other penalties imposed for the non-payment of their notes and obligations in specie,' &c.

"Thus the banks of that city and state, having suspended specie payments—although in a better condition, according to their own statements, than the banks of New York city (which maintained specie payments)—for the purpose of accommodating themselves at the expense of their creditors—they were supported in this act by the '*Friends of Equal Rights*.' And what was the object of the friends of equal rights? Why, first, to applaud and sanction an act of folly and injustice; secondly, to require of the legislature of Pennsylvania, that they should, in their sacred character as legislators, sanction and legalise the impolitic and dishonest act, and thus protect them against the just demands of those persons who had, on the faith reposed in the honour and honesty of the banks, and in the laws of the state of Pennsylvania, trusted to their paper promises, under the guarantee of the laws of that state.

"The moral character of this proceeding, however low it may appear to men of sound and honest views of banking, and who have been taught to respect the rights of property,

was about on a level with similar proceedings in most of the opinions generally current throughout the country in respect to banks, and of legislators by whose acts banks were brought

"These resolutions of the 'Friends of Equal Rights,' as they themselves, were assigned to a committee of gentlemen, one of the city, and another a judge of one of the courts of law presented to the legislature of Pennsylvania.

"That enlightened and honest assembly, in pursuance of the 'Friends of Equal Rights,' and in conformity with petitions from other similar regard for equal rights, shaped their measures in accordance made upon them; and what has been the result of 'banking' petitioners recommended? and considering it as a 'substitute' and the other ordinary assets of a bank?' This is a question correct answer, by reference to notorious and indisputable adduced.

"A reference, then, to authentic statements of the market value of sixteen banks of the city of Philadelphia, published in its exhibits the following facts:—

"On the 14th of August, 1838, after the return of most of the shares of the sixteen banks were worth in a sound currency, 63,565,430 dollars. In about twelve months they sunk to 15,065,910 dollars. In January, 1842, they had fallen allowing the shares of the United States Bank to be worth subsequently they sank to a still lower sum."

"This enormous destruction of bank capital is, however, but a list of pecuniary losses which the state of Pennsylvania has indirectly, from the workings of a bad system of banking a considerable portion of the capital of the United States bank was the union and in foreign countries.

"If, then, it were possible to obtain all the data on which the pecuniary loss of capital—by what are termed internal losses—double the expense which they ought to have cost, and, in fact, cannot become productive for a long period—and which were and some of them originated by bank management. If to this misdirection of capital, be added the loss of bank capital, and for the injury sustained by all branches of industry, it might be said the state of Pennsylvania is, at this day, at least 100,000,000

\* On the influence of party feeling and party interests upon banking, Mr. Nathan Appleton, in his work on the currency, makes the following statement:

"Unfortunately the subject (currency and banking) has been considered of the day. Nothing can be more unfavourable to the development of political economy, than such a connexion. A good deal which is truth, has been put forward by political partisans on either side.

"The existence or non-existence of a national bank, has been made the political parties into which the country has been divided, that each party has its own merits, without reference to its political bearing, may be considered. Yet it involves questions of political economy of the most difficult kind, and can be little and imperfectly understood by the masses of the country. It has made this question the symbol of party. The consequence has been that the mercantile business of the country has been agitated, and sometimes the banking operations with the struggles of party."

In Mr. Gallatin's last pamphlet there is the following reference:

"The fault, or error, originated with the people themselves. They attempted to ascribe their disasters altogether to legislative acts; to the influence of party feeling, or to other collateral causes, which have, indeed, aggravated the evil, but which have been exaggerated."

would have been under the action of a sound and steady system of banking and currency."

Mr. Lee, in exposing the reckless banking operations in the United States, makes the following observations:—

"It was about 1832 or 1833, that banks began to be multiplied, not for the purpose of supplying a currency for the country, or of safely and profitably loaning the funds intrusted to them by the stockholders, but to enable, in most cases, their managers, who either had no capital of their own, or an insufficiency of it, to get possession of the capitals of the stockholders. They succeeded in their efforts, and what have been the consequences as respects the shareholders in the 704 to the 901 banks that were in operation from 1835 to 1840? Why, of the aggregate amount of capitals which extended at one period to 358,442,692 dollars, not 200,000,000 dollars now remain, taking the shares of the banks still in existence at par. But would such an estimate be a correct one? Why, even in the city and state of New York, where banks, according to Mr. Gallatin's late pamphlet, have been managed as well as in any of the states, and far better than in most of them, something like a third of the bank capital has been sunk; nor are there many banks in the city or in the state of New York, whose shares will bring par; while in a large majority of them, they will not average 75 cents per 100. The banks in New England, as we apprehend, have not met with much better success, as may be seen by the current prices of their shares, and still more clearly by the actual results of their operations, whenever the stockholders have examined into them.

"The direct loss, however, of more than 200,000,000 dollars by banking, and perhaps 50,000,000 dollars in addition, from depreciation, or from the entire valueless condition of the immense amount of false and fraudulent issues of those banks—fraudulent, because in many cases based on nothing but the false promises borne on the face of them—is as nothing in comparison with the destructive effects of free and unlimited banking, and the free and reckless system of trusting, upon all the great branches of industry, and more especially upon the manufacturing interests of New England, exposed as they are from the manner in which we conduct our sales—to the worst consequences resulting from the action of a vicious system of banking, and its concomitant, an equally vicious system of trusting.

"A currency always tending to redundancy, and usually in that condition or in its opposite one—that of insufficiency—united with a long-credit system, both at the banks and between individuals, as has been the case in this country—must necessarily produce those sudden and extreme variations in the value of money, with all their direct and collateral evils—which have proved so injurious to the whole country, and so utterly ruinous to the most active and useful portion of it—whose stability and success depend almost entirely on the maintenance of an unfluctuating, *permanent measure of value*—the most important function of money—the currency of a country."

"For the past twelve months there have been but few failures in Boston, and business has been in a safe if not very prosperous condition; and, consequently, the banks ought to have done a fair if not a prosperous business. The returns, however, to the legislature, down to October, 1842, show an average dividend of only 4 52-100 per cent per annum. But even a portion of that dividend, if one may judge from the low prices of the stocks of some of the banks, may have been made from the capitals of some of the weak banks. And what are the future hopes of the stockholders founded upon—when the loans are now made at four or five per cent per annum, on capitals subject to from one and a half to two per cent charges, superadded to bad debts, which they can hardly expect to escape when the next revulsion arrives."—*Letter to Cotton Manufacturers.*

The following remarks are extracted from a communication of a gentleman who once enjoyed a higher degree of popularity in this community, among its most influential members, than any man in the country, on account of his skill in banking, borrowing, loaning, and regulating the currency—and, perhaps, continues to do so, since his principles of banking are generally acted upon among us. We mean Mr. Nicholas Biddle.

who, in his letters and other public communications, of the ment in his banking concerns, and in the affairs of the bus the interference and hostility of the executive, sustained by Mr. Biddle imputes the necessity imposed upon the banl ments. Mr. Biddle, after enumerating what he considers so the suspension, adds :—

“ Lastly and mainly, the alarm about bank-notes, pro has been deeply spread through the country, till what w has settled into an implacable hostility. No man, I think, that the executive of the United States seeks to maintain h lar passion against the credit system—and that the whole is employed to infuse into the minds of the people, distrust :

“ I go further. There is an outcry abroad, raised by against the banks in the United States. Until it was distur banking system of the United States was at least as good as t country.

“ Now, supposing it true that men have bought much president to dictate to the citizens of this country, whether too much broadcloth? They might be permitted to know concerns quite as well as he does, leaving the evil, if it be on excess, &c.

“ These troubles,” continues Mr. Biddle, “ may not, however, from them two great lessons. The first is, that we can have no while the public revenue is separated from the business of the cour ignorant politicians, with no guides but their passions and interest specie order is the revenge of the president upon Congress for p have less doubt that the dispersion of the revenue among a multitu obscure aspirings of some treasury Caesar.

“ The other lesson is—one a thousand times repeated and a the trust all demagogues of all parties who profess exclusive love for w the last six years, the country has been nearly convulsed by efforts of all classes of citizens—to make the labourer regard his employer poor against the rich. These trashy declaimers have ended by bri tion where its whole industry is subject, far more than it ever w large capitalists—and where every step tends inevitably to make poorer.”

Mr. Lee observes, “ By such representations as are here ma United States Bank, the political party, who were desirous of ove order that their leaders might occupy the places that were then filled to believe that the monetary troubles, which began to be seriously t wholly by the action of the government.

“ In respect to what Mr. Biddle has said about ‘the demagogues haps, a large majority of the men in power, and possibly a still lar seeking to displace them for the sake of obtaining their offices, few p test the correctness of his description of their conduct and motive own observations of passing events, and of the sentiments and acts may be placed, one might conceive, on the judgment of a man of M servation, and whose experience in public concerns may have fur opportunities of verifying the truth of his remarks.

“ Although one might be ready to fall in with Mr. Biddle’s opi ‘distrusting demagogues of all parties, and rash and ignorant politi own passions and interests,’ yet that gentleman cannot be consider tion of opinions upon the causes which led to the suspension of and 1841, succeeded that event. In commenting upon the ill e spirit, and party venality, upon the general interests of the nation an impartiality common to every independent and reflecting citize and honour of his country, and who participated with that gentle and indignation which he has expressed at the meanness and imm men who are ready to desert or to sacrifice the great interests i guardianship, to their own party and personal views, whenever the in opposition to each other.

"The following extract from a communication of an experienced statesman, who has evinced more than common courage in the promulgation of wholesome but unpalatable truths to the people, and the rulers over the people, expresses opinions, coincident in some degree with those put forth by Mr. Biddle, in reference to the motives and conduct of *party politicians*—a description of persons comprising, we suppose, very nearly the whole of that class of patriotic citizens who are now in power, or who have been in power, in the latter stages of our history, or who are likely henceforth to be in power; judging upon the principles *acted upon*, although not *professed*, by most of the prominent candidates for public favour:—

"As our views of expedient action for the future might (says Mr. John Q. Adams in a letter to a correspondent) in a great degree depend upon the conclusions to which we have come upon the past, it is impossible that the measures which I should deem the only effective remedies for our complaints, should be acceptable to the ruling powers or the country. I am, and during a great part of my life have been, in a minority. It is the business of a majority to prepare and accomplish measures. It is too much the practice of minorities to expend all their energies upon devices to defeat the measures of the majority. *The question of right and wrong, so far as my experience goes, is of use to either party only for the purpose of making profession.*"

"These are the reflections of a man of great abilities and of careful observation, who, for upwards of half a century, has been constantly engaged in the most important public employments that were within the gift of his own state and of the nation. These opinions are, no doubt, in accordance with those held by other intelligent and experienced persons, though, unfortunately for the good of the country, and equally so for the reputation of public men, they are too seldom manifested by those who, from the stations they occupy, are bound to proclaim to the nation the deficiencies, delinquencies, and corruption of their rulers.

"Having given Mr. Adams's views of the principle which governs the conduct of professing patriots and party politicians, we subjoin one other extract from the same communication, conveying some of his notions and feelings, in respect to the conductors of banks, who, by their imprudence, their ignorance, or their want of integrity, bring the institutions under their control into a predicament which renders it necessary or expedient for them to violate their duty to the country as administrators of the currency, although conferred upon them as a valuable privilege, and, at the same time, break the laws of the land, infringe the rights of property, and furnish an example to the country more depreciating in its effects to the standard of morals, than the act of suspension was to the currency of the country. 'The worst part of a suspension (observes Mr. Appleton in his pamphlet) is its moral effect on the community' That is an assertion the truth of which, after the experience the public have had, few persons will call in question.

"We are now (says Mr. Adams, in referring to the suspension of 1837), in the midst of a national bankruptcy, occasioned by the insolvency of multitudes of individuals. We are told that all the banks in the United States have suspended specie payments—and what is the suspension of specie payments, but setting the laws of property at defiance? If the president and directors of a bank have issued a million of bills promising to pay five dollars to the holder of each and every one of them, the suspension of specie payments is, by one act, the breach of one million of promises. What is this but fraud upon every holder of their bills? And what difference between the president and directors of such a bank, and the skilful artist who engraves a bank bill, the fac-simile of the bill signed by the president and directors, and saves them the trouble of signing it, by doing it for them? The only difference that I can see in the two operations is, that the artist gives evidence of superior skill and superior modesty. It requires more talent to sign another man's name than one's own, and the counterfeiter does, at least, his work in the dark, while the suspenders of specie payments brazen it in the face of day, and laugh at the dupes and victims who have put faith in their promises."

In reference to some of the remedies which had been suggested for the purpose of overcoming the effects of the suspension, and restoring the currency to its natural and sound condition, Mr. Adams makes the following remarks:—

"I thought of this, as I thought of the dry dock, gun-boat, restrictive, and anti-navy system of Mr. Jefferson. It cost the country a terrible war to be delivered of that, but the nation was effectually cured of its hydrophobia. The war (1814) was a drastic-purge, but it effectually worked its cure. I fear that our present bankruptcy will need a more violent cure of alternatives, but the cure will come when the people are prepared to receive it. They are certainly not so now; they will most probably not be so during the remainder of my term of life. I hope you will live to witness and enjoy the convalescence."

Mr. Lee observes:—"Now, as to the suspension of the banks, it was contended by the managers of them, that such an act was necessary for the salvation of the business community, and the stockholders of the banks; and had it been otherwise, that their condition was such as to render it inevitable. We admit the truth of these allegations, and find no fault with the directors of those establishments for having yielded to the force of circumstances which, situated, as they were, they had no power of resisting.

"But the question arises, how came the banks in a condition which rendered a violation

their duties to their creditors, to their stockholders, and to the unavoidable measure? The answer is an obvious one. Because banks, for the gratification of their own purposes, and alike regardless of their constituents, and of a just sense of their obligations wantonly, or dishonestly—to conduct their affairs in disregard of principles of currency, credit, and banking, which ought always to be the important trust which they had assumed. And what was that trust?

"But it is often said, in exculpation of the directors of banks, that, as they receive no compensation for their services, it would be a strict account for their mismanagement. The want of compensation is a cause for the refusal of a trust, but will not be admitted as a valid cause for a trust when once accepted.

"But, the office of bank director has not usually been pressed in that capacity. It is a situation desired by men of influence. Banks (says Mr. Appleton) are selected from those of the community. In this view of the case, the directorship of a bank is a judgment and honesty of an individual, which is a sufficient condition for holding that important, responsible, and useful station—and have received or desired—for services ably and faithfully performed.

"The office of bank director has been eagerly sought for, by men who, destitute wholly of property, or having an insufficiency of property, were desirous of gaining the control of the capital of banks, and having for the managers of banks men so circumstanced, and with property intrusted to them for safe investments, for the prospect of throwing upon the stockholders whatever losses might be incurred, and throw them into their own pockets. It is obvious, that a copartnership, in which while the other party bears all the losses, must always terminate in the lending party.

"Now, if there are persons who distrust the correctness of the abuse of confidence and power of a portion of the directors of banks, flowing therefrom to their constituents, we would refer them to the investigating committees, who, for the past thirty years, have been engaged in the investigation and management of banks. Such an inquiry would show that bank capital may be traced to loans made to directors, and to the use of improper and insufficient securities—upon lands, houses, ships, and other kinds of property, or titles to property, which are generally insufficient for money pressure, when the wants of a bank require their immediate supply, upon *accommodation notes or acceptances*—resting on no security, but upon borrowing parties. Notes created and tendered to a bank—no security, but upon *business paper*, of anticipating the receipt of capital already in circulation, and retaining possession of the capital of the bank proprietors upon the sale of property, not upon capital passing between buyers and sellers, but on promissory notes and endorser's;—this fictitious paper is seldom resorted to except in cases of emergency, or having some capital has, in his operations, gone beyond his credit, everywhere but in the bank where, from his official influence, he can borrow without securities or without credit.

"We will not go the length of maintaining that loaning the capital of a bank, on the two classes of notes and securities referred to, is a violation of the public, because the usages of banks, under the direction of the government, have given a sanction to the practice. Nevertheless, the practice is opposed to all sound and safe principles of banking—and the ill effects of its exercise, in this country, from the origin of the banking system, are a sufficient proof of its soundness and its insecurity.

"It is no justification to say, and to prove that accommodation notes are founded on business transactions. It is admitted, that on our part, individuals whose single promises might, and for a long period of time, be secure; whose promissory notes, without an endorser, would command the confidence of the union—and more than the United States stock for months. The objection, however, to discounting on paper of this kind, comes by showing its solidity in particular cases—although, we cannot but see, that it would be creditable to men in such high credit as we have in notes of that character, since it would be wholly unnecessary as at the same time it would be requiring a bank to violate a sound principle of banking—which it is important to property men to maintain in the practice of banking.

"The objection, then, to the practice in question, lies in the

one which, if disregarded in one instance, would be likely to be infringed in another case; or else bring upon an institution the charge and the odium of injustice or partiality. If mere safety in particular cases of individuals were to furnish a rule of action, why not loan upon mere verbal promises of highly responsible persons? It would not be from an apprehension of insecurity, since, in all the great Atlantic commercial cities, there are numerous individuals, whose verbal promises, recorded in a memorandum book at the bank, would command more money, at a given term of credit, than many of the notes of directors of banks—which pass freely at their own boards—although they should be covered with endorsers of the quality of the promissors. No intelligent man will dispute the correctness of that assertion; yet it would be inexpedient and improper for a bank to invest its capital and its credit, or any portion of them, in such recorded promises, although it would not be worth one-tenth part of the sum to guarantee their payment, which would be demanded to guarantee millions of business paper, or one-thousandth part of the premium which a prudent and intelligent person would require to insure the greatest portion of the accommodation paper discounted at most of the banks through the union between 1833 and 1842."

"Matters," says Mr. Lee, "are differently managed in the banking institutions of this country from what they appear to have been in the Bank of England. The directors of many of the banks in the United States have been deeply concerned in speculations in the shares of the banks under their control, and in many cases without having been possessed of sufficient capital, or any capital of their own, to sustain the losses which may have resulted from those stock operations, or from any other transactions carried on with the money borrowed from banks upon insufficient or worthless securities.\*"

"A very large proportion of the managers of banks seek the office for the sake of being in a position where they can borrow more money, and on more favourable terms, than they

\* The president of the late United States Bank, Mr. Nicholas Biddle, in a communication before the public, makes the following remarks:—

"Banks are often directed," says this experienced banker, "by needy persons, who borrow too much, or by sanguine persons anxious only to increase the profits, without much pecuniary interest or personal responsibility in their administration. The constant tendency of banks, therefore, is to *lend too much*, and to put too many notes in circulation. Now, the addition of many notes, even while they are as good as coin, by being always exchangeable for coin, may be injurious, because the increase of the mixed mass of money generally occasions a rise in the price of all commodities.

"If a bank lends its money on mortgages or stocks, for long terms, and to persons careless of protests, it incurs this great risk, that, on the one hand, its notes are payable on demand, while, on the other, its debts cannot be called in without great delay—a delay fatal to its credit and character. This is the general error of banks, who do not always discriminate between two things essentially distinct in banking, a debt ultimately secure, and a debt certainly payable. But a well-managed bank has its funds mainly in *short loans* to persons in business—the *result of business transactions*—payable on a day named, which the parties are able to pay, at any sacrifice, in order to escape mercantile dishonour. Such a bank has its funds, therefore, constantly repaid into it, and is able to say, whether it will, or will not lend them out again.

"Banks are the guardians of the currency, the depositories of the coin—and every feeling which can appeal to their own honour, as well as to their public duty, should urge them to maintain their credit at the sacrifice of their profits. To the Bank of the United States such considerations specially apply; but as that institution has set the example of the restriction, it forms naturally the principal subject of reproach among those who complain."

Again—after describing the process of correcting, through the operations of the banks, the evil tendencies and effects of a redundant currency, Mr. Biddle adds:—

"Such is the circle which a mixed currency is always describing. Like the power of steam, it is eminently useful in prudent hands, *but of tremendous hazard when not controlled*; and the practical wisdom in managing it lies in seizing the proper moment to expand and contract it—taking care, in working with such explosive materials, whenever there is doubt, to incline to the side of safety. These simple elements explain the present situation of the country. Its disorder is over-trading, *brought on by over-banking*. The remedy is to trade less and to bank less."

"How much cause has the country to regret, that a man whose theoretical views of banking were so correct, did not always adhere to them in the management of the institution under his direction and control? Mr. Biddle refers to the complaints against the restrictive measures of the Bank of the United States, coming, no doubt, from the local banks, whose operations would thereby be restrained—and he justifies the course the United States Bank had taken. Now, in reference to the returns of that bank, we find the following facts:—

otherwise would be able to do, and at the same time have a dating their friends and dependents. This, in a country worth two or three per cent per annum beyond the bank rate a much higher rate, is a strong inducement for men transacting small capital, and in numerous instances merely on credit,

BANK RETURNS.	
Loans.....	d. 33
Circulation.....	9
Deposits.....	14
Coin.....	6

"The currency of the country, including the issues of the United States Bank, exceeded 55,000,000 dollars of bank-notes—and the deposits may have exceeded 150,000,000 dollars: There are no returns published for that year, however, by Mr. Gallatin's estimates, amounted, in 1830, to only 115 millions—since the currency of the country was not in a state of expansion, it could not exceed 100,000,000 dollars, or 105,000,000 dollars.

"Now, if the currency could have been maintained at the point Mr. Biddle thought it expedient to exercise his restraining power over it, would have been saved from the immense injury, suffering, and disturbance subsequent over-issues and long loans of the banks.

"But, did the subsequent conduct of Mr. Biddle evince an adherence to the prudent course which he had, in the communication referred to others, intrusted—as he well remarks—with the guardianship of the returns of the Bank of the United States, furnishes a reply to the question.

"The liabilities and loans of the United States Bank, in 1828, the letter from which extracts have been made, and which has always been already stated. The bank at that period, and for two years, the returns, to have been carrying out the views presented to the public upon currency and banking. The returns after that time show the extension of operations, as will be seen by the following figures:—

BANK RETURNS.	1830	1831	
	dollars.	dollars.	
Loans.....	40,663,805	41,042,057	
Circulation.....	12,524,145	16,251,267	
Deposits.....	16,045,780	17,297,041	
Coin.....	7,608,076	10,400,040	

"If the returns of 1828, when Mr. Biddle wrote his essay, be compared, the result will show, in a striking manner, how entirely all prudent considerations are disregarded by the conductors of the bank:—

Circulation.....	9,435,677
Deposits.....	14,947,330
Coins.....	6,170,045

"The United States Bank, the great regulator of the currency and the statements and reasonings of the advocates of our monetary system by the state of New York, the returns of whose banks stood as follows:

BANK RETURNS.	January 1, 1830.
	dollars.
Loans.....	20,370,693
Circulation.....	7,359,230
Deposits.....	10,354,500
Coin.....	1,560,291

"The banks in most of the states made corresponding movements. The banks, exhibiting the following results, show the extravagant, banks, during which period prices of every commodity rose; first, for

appointment of a bank director; and that being once effected, the situation may generally be held as long as will suit the purposes of the elected, or as the bank may happen to continue in existence. In cases where persons who are desirous of borrowing largely fail of being elected into an establishment already existing, it is not uncommon *for them to found banks, in which they contrive to have the command of the elections*, and when once incorporated they sell out their own shares in the corporation, purchased with borrowed money, and thus accomplish the object they have in view, namely, to get the control of the capital of the stockholders, who may have subscribed for shares with an intention of holding them as a permanent investment. Even in banks established on better principles, 'the direction,' says Mr. Gallatin, 'must necessarily be placed in the hands of a few men, who have comparatively but little interest in the bank. Most of them are selected amongst men in active business, in order that they may judge of the solidity of the paper offered for discount; and as they are not paid, it is impossible to expect that they should attend without deriving some compensation for the sacrifice of a portion of their precious time. *This may consist in part of the discounts they obtain for themselves*, which may always be kept within reasonable bounds. But the power and consideration attached to the office, *can only be obtained by granting favours*; whilst, on the contrary, refusal renders the directors unpopular. To this may be added a want of moral responsibility.'

"Take the opinion of another writer upon banking, Mr. Nathan Appleton.—From one of his pamphlets, we extract the following passage: 'It has not been uncommon for

ation of money as compared with exchangeable commodities; secondly, in consequence of a spirit of speculation and gambling, which will generally, if not always, follow and accompany such an expansion of credit and currency:—

BANK RETURNS.	1830	1837
	dollars.	dollars.
Bank liabilities .....	116,883,826	276,593,075
— loans .....	209,451,214	523,115,702
Capital .....	143,192,368	290,772,091
Coin .....	22,114,917	37,915,340

"Of this immense amount of loans, there is reason to believe, from the facts which have been brought to light by developments of the affairs of banks, that by far the largest proportion were made to men of bold enterprise, or, more commonly, to reckless speculators and unprincipled gamblers, who were trading, not upon capital, nor upon credit to which they were entitled, but upon the ignorance, credulity, or upon the fraudulent compliances of unfaithful and dishonest managers of banks. The largest portion of the unbankable, doubtful, and worthless securities which the banks discounted at the period referred to, were probably for the account of the officers and directors of banks, and their relations, friends, and associates.

"Of the two classes of favoured borrowers of bank capital and bank credit, a very large majority have failed of success, or were utterly ruined; and the bank stockholders, who had furnished them the means of doing business, were, of course, sufferers to the extent of the support given them. Such has been the manner in which the capitals of banks, in a majority of cases, have been disposed of. Nor is there any reason, suggesting itself to our mind, why they should not hereafter pursue a similar course, so long as the proprietors of bank capitals confide the care and management of them to persons who, from the position they are placed in, have an interest, to thus mismanage them, too powerful, judging from the past conduct of bank directors, to be restrained and over-ruled by considerations of duty to their constituents, the corporators, or, to the public, who have an interest in the safety and solvency of banks as holders of their paper issues.

"'Banks,' as Mr. Gallatin has told us, and it should never be forgotten, 'are governed rather by borrowers than lenders;' and, as we will add, the principal borrowers of banks, especially in a money pressure, are the directors of banks and their relatives, friends, and dependants. 'It is believed, that in all cases,' says Mr. Nathan Appleton, 'of bank failures in Massachusetts, the failure of the principal stockholders and directors has accompanied, or preceded, the failure of a bank.' 'Banks are too often directed by needy persons, who borrow too much, or by sanguine persons anxious only to increase the profits, without much pecuniary interest or personal responsibility in the administration. The constant tendency of banks, therefore, is to lend too much, and to put too many notes in circulation.' This is the opinion of Mr. Nicholas Biddle, and his experience of bad banking has been large enough to enable him to form a correct judgment on the point in question.

banks to have been gotten up, with a view to furnish funds for private use of the principal stockholders ; or the same object accomplished by buying up a majority of the stock, so as to contr

\* "That there is a considerable amount of banking capital, belonging to us, we know to be the case, and if, we would ask, if any one can doubt that their confidence in those institutions? It is true, however, that those directors of banks, or who have been so much in the current of business, the principles on which they are conducted, avoid bank stocks as an investment of property. If they depart from that rule, occasionally, it is but arises from the difficulty, of finding any better mode of investing the property legally imposed on guardians, executors, and trustees, as to the property intrusted to them shall be loaned or invested. But, under the management of the prudent and foreseeing capitalists shun investments which would be dissatisfied with a moderate rate of interest, but because they have no capital. 'It is a well known fact,' says Mr. Appleton, 'that the prudent capitalists avoid bank stock as an unprofitable investment; they can find a better mode of investing their property. An examination of the lists of stockholders in the large banks will show that a portion of the stock is the property of minors, widows, single women, and societies, a class of persons and institutions entitled to the especial consideration, rather than to be made to support the burdens which properly belong to them, and able to take care of themselves.'

"These remarks were made in 1831, since which period the stock has lost much larger sum, by the mismanagement and the misconduct of banks, than the banking capital of the country, as it stood by the returns coming down to 1830. What may remain of the wasted and impaired capitals of the banks is a matter of uncertainty. There can be no doubt, we conceive, that a considerable portion of the stocks, lands, mortgages, accommodation notes, and other uncertain securities, in the hands of the banks, are likely to become greatly depreciated or lost.

"The highest return of bank capital gave the enormous sum of 354 millions at the close of 1839. Now, as there had been a great number of bankruptcies, the stockholders could hardly have failed losing some 30,000,000 dollars, between 1833 and 1839, by outright and ascertained bankruptcies.

"What may now be the actual value of the bank capital of the country, we are unable to ascertain from any official statements before the public; but from the returns as have been made and published, we should venture to say, that at the 1st of January, 1843, at the time the currency was in a sound state, and gambling in stocks had not been revived, did not exceed 200,000,000 dollars.

"If this be a correct view of the matter, or one approaching to correctness, the proprietors of bank stock have lost by bad banking, between 1833 and 1839, an amount of from 168,000,000 dollars to 198,000,000 dollars.

"The author of this pamphlet, Mr Isaac Bronson, pointed out the various elements in which the whole country was involved. Some of his remarks have already been cited, to which the following are added:—

"Just anterior to the prostration of business our manufactures and commerce were extended, and conducted *mainly on credit*. Individuals and companies, were often found to employ tens and hundreds of thousands. These borrowed the immense amount of paper currency furnished by the banks which were established in the United States. The banks on the one hand and the men of business on the other, for their respective interests to employ the greatest possible amount of the paper of the banks were proportional to their discounts, and these were proportional to the amount of paper, it is very obvious, that there would be a constant tendency to strain by nothing but the necessity of redemption. But unless an artificial demand for remittances to foreign countries, or some other exigency of business, should create a demand for specie, none would be exacted. A paper currency, would be preferred in the common exchanges of trade, and would repose in the banks.

"In referring to the abandonment of the principles laid down by Mr Bronson of the bank over which he presided, we are far from ascribing to the conduct of the bank imprudent or culpable it may justly be deemed, that extreme degree of imprudence given it, by many of the local banks, and party politicians—in both cases that institution.

It is obvious that banks so situated, furnish a very unsafe circulating medium, since the solvency of the bank depends on the success and solvency of the principal stockholders, who, in such cases are usually the directors. It is believed, in all cases of bank failures, in Massachusetts, the failure of the principal stockholders and directors has accompanied or preceded the failure of a bank. The great point, therefore, to be guarded against, is the liability of banks to fall into few hands, to be used for their private speculations.'

"Mr. Gallatin says, 'Of all the causes, however, which contribute to an improper extent of discounts, the most general and efficient, the most prolific source of the errors of bank directors, is the natural sympathy which they feel for men who are engaged in similar pursuits to their own. It may, upon the whole, be affirmed, that banks, though money lenders, are, in fact, governed rather by the borrowers than by the lenders.'"

"But we have no belief that Mr. Biddle, whatever may have been his disposition and his wishes, could, with the exercise of his admitted talents, and his skill in banking, have prevented the 901 local banks from extending themselves, sooner or later, and to a degree which must, in spite of the controlling power of the United States Bank, have brought the country to a suspension of payments.

"All the banks in the country were in favour of free issues, long credits, and free trustings, upon every species of security; and, above all, in favour of high prices. The business community concurred with the banks, and the whole country was deluded with the notions of John Law; that an advance in prices, from an increase of money, is equivalent to an augmentation of wealth corresponding to such an augmentation of price. From that delusion the country could only have been awakened by the re-action of the system, which we first experienced in 1837. Even with all the suffering accompanying and following that event, the nation at large have gained but little insight into the true causes of our troubles.

"The nation was persuaded by party men, and by the managers of banks, who had an interest in misleading them, or were, perhaps, in many instances, themselves misled by their own ignorance, to believe that what was caused by an overflow of currency, and an extravagant extension of the credit system, was the effect of the political measures of the government. They were further persuaded, that the only remedies for the pecuniary evils under which the country was labouring were, first, to remove the men in power, and fill the vacated places by persons who were in pursuit of official power and public support; secondly, to re-establish the credit of the 901 banks—a considerable portion of which were then, as events have since shown, in a state of insolvency; and, by further emissions of paper money, raise the fallen prices of commodities to the rates they bore from 1834 to 1837, when the currency was in excess, and constantly in a state of expansion.

"The remedies which had been recommended for the cure of our difficulties were adopted. The credit of the suspended and the ruined banks was restored. The country was blessed with increased issues of money, and with a transference of political power to other hands, followed, as might have been expected, by further revulsions and suspensions. It was, however, not till the final suspension of 1841, that the conductors of banks would admit, or the deluded public believe, that the primary and operative causes of the pecuniary difficulties and sufferings of the nation, and that, too, in the midst of abundant crops and all other means and signs of increasing wealth, might be traced to the receding movements of an exuberant currency; and the contraction of an extravagant and unwholesome system of bank credits and mercantile trustings, created and supported by the same class of persons who caused an extension of the bank machinery, and for similar purposes—namely, in order to take advantage of the ignorance and credulity of the public, for the promotion of their own pecuniary purposes; and from similar motives, will the same system be upheld and supported by that description of persons, so long as it will be endured by the country."—*Letter to Cotton Manufacturers.*

"If Mr. Biddle had acted upon those sound and conservative notions which have been promulgated by Mr. Gallatin, Mr. Gouge, Mr. C. C. Biddle, and by himself, to some extent, in the early stages of his career, he would have been cried down from one end of the country to the other, as a cold-hearted theorist—a visionary dreamer, who, having the power to make money plenty—credit a substitute for capital—and bold enterprise and inconsiderate rashness to stand in the place of prudent foresight and honest industry;—he would, we repeat, have rendered himself odious to men of all classes and parties, and especially to nearly all the conductors of the local banks—as a man possessed of the power of enriching every body, and yet withholding its exercise to gratify the theoretical notions of a philosopher.

"There was a time when Mr. Biddle acted, according to the views of Mr. Gallatin, with great prudence and judgment, but he was never less popular among men of influence engaged in trade and in banking than while so conducting his concerns. Such was, also, the feeling in regard to"

" Now, the gentlemen whom we have cited are not unfriendly to banks, nor can they have any motives to put them to a disadvantage with the public by a misrepresentation of facts. Mr. Gallatin, in common with the best writers on currency, is, to be sure, what he himself, in his correspondence with Mr. Robert Walsh, calls an '*ultra-bullionist*;' but believing that the nation are not yet ready for a currency in that state of perfection, he has made great efforts to correct the evils of the present system. It is to be regretted, that the excellent advice he has given, and the sound principles he has laid down in his pamphlets, have not been followed. Nevertheless, his labours through the press, and his personal influence and authority over the intelligent merchants of New York city, where he resides, have not been wholly lost. Mr. Gallatin, as is well known,

predecessor, Mr. Langdon Cheves. He restored the bank from a state of confusion and discredit, to a high degree of credit; but having done that service, he was complained of as too illiberal, too unenterprising, too conservative in his loans and issues, for the support and extension of the great interests of the country. This gentleman, whose conduct, while presiding over the concerns of the bank, merited the highest praise which has been bestowed upon it, was by no means *popular*; and although a man of too high a sense of character to be driven from his post by such a consideration, he resigned his office after four years' service, from disgust at the inability, or the disinclination, of the stockholders and the public, to give him that support which was necessary to enable him to persevere in the prudent, salutary, and honest course he had constantly pursued during his presidency.

" Mr. Cheves, in the management of the important trust confided to him, evinced the same independence of mind, and the same integrity of principle, that he had shown as a legislator, while a member of Congress, at an eventful period of our history; and though he may, in both instances, have parted with some portion of his popularity, he gained—what to men of elevated, just, and generous views, is of infinitely more value—an increase of reputation. ' Under the administration of Mr. Cheves,' says Mr. Appleton, ' by whose energy the United States Bank was barely saved from stopping payment, the currency was restored to its true character, by a rigid system of contraction, but accompanied with intense public suffering; which was, indeed, unavoidable, but made the bank and Mr. Cheves exceedingly unpopular in extensive portions of the country. It was during this period that many of the states attempted to expel the bank from operating within them, by taxing the branches, and by other modes of coercion.'

" In what a striking and melancholy contrast does the conduct of Mr. Cheves appear—under strong temptations, as a public man—to that of multitudes of ambitious, but low-minded and venal demagogues, with which the nation has been, and still is, afflicted? Some of whom, although in possession or in pursuit of the highest class of offices in the country, traverse the most sacred principles, under the slightest temptations, and with as much facility, and as little sensibility to shame, as is evinced in the indecent and mercenary gyrations of the most shameless of the public performers.

" The condemnation, on the part of political partisans, of the proceedings of the United States Bank, with whom it mostly originated, was *feigned*—because, at the moment they were contending against it, many of the leading persons among them were the managers of the local banks that were conducted on the most imprudent and dishonest principles, resulting in an entire loss of the capitals of some of them, as well as a heavy loss to depositors and bill holders. This was eminently the case in regard to some of the banks in Boston and its vicinity, as the stockholders, bill-holders, and depositors can unhappily testify.

" Again, as respects the policy of having a national bank; there was, to all appearances, no *sincere opposition* to the *principle* involved in the existence of such an institution, as fiscal agent of the government, and as a conservator of the general currency of the country."

Even President Jackson, with all the hostile feelings which he has evinced against the late United States Bank, was not opposed—to a bank. In his message, vetoing a renewal of the charter of that establishment, he thus expresses himself:—

" That a Bank of the United States competent to all the duties which may be required by the government, might be so organised as not to infringe on our delegated powers, or the reserved rights of the states, *I do not entertain a doubt*. Had the executive been called upon to furnish the project of such an institution, the duty would have been cheerfully performed. In the absence of such a call, it is obviously proper that he should confine himself to pointing out those prominent features in the act presented, which, in his opinion, make it incompatible with the constitution and sound policy."

That a large majority of the leading partisans of both political parties were, also, in favour of a national bank, was shown to be the fact, by the large majorities in Congress which, in the face of the strong objections of the executive, and in spite of his popularity, voted for a renewal of the charter.

acted a conspicuous and efficient part, in hastening the general resumption of cash payments in 1838, in which the city of New York took the lead.

"The suspension took place in New York, May 10th, 1837; and the resumption was effected in that city, and in the New England States, early in May, 1838, and in most of the other states in the three following months.

STATEMENT of the Condition of the Banks of the Union, according to Returns dated May, 1837 and 1838.

DESCRIPTION.	May, 1837.	May, 1838.
	dollars.	dollars.
Bank loans.....	521,331,364	479,364,934
Ditto circulation.....	120,416,007	126,149,905
Ditto deposits.....	169,153,681	85,606,837

"Here is a very slight reduction in loans and liabilities, as compared with the returns of 1837. If we are guided by Mr. Gallatin's estimates of a sufficiency of bank paper, there should have been a curtailment of upwards of forty per cent in the bank issues to place the currency of the country in a natural, and, to borrow his phraseology, in a 'HEALTHY SITUATION.'

"The following extract from a speech of Mr. Webster exhibits his views of the destructive consequences of an ill-regulated and depreciated currency upon the interests of the labouring classes, and especially of that portion of them who have little else to rely upon than their daily wages. 'The currency of the country,' says Mr. Webster, 'is at all times a most important political object. A sound currency is an essential and indispensable security for the fruits of industry and honest enterprise. Every man of property or industry, every man who desires to preserve what he honestly possesses, or to obtain what he can honestly earn, has a direct interest in maintaining a safe circulating medium; such a medium as shall be a real and substantial representative of property, not liable to vibrate with opinions, not subject to be blown up and blown down by the breath of speculation, but made stable and secure by its immediate relation to that which the whole world regards as of permanent value. A disordered currency is one of the greatest political evils. It undermines the virtues necessary for the support of the social system, and encourages propensities destructive of happiness. It wars against industry, frugality, and economy; and it fosters the evil spirit of extravagance and speculation. *Of all the contrivances for cheating the labouring classes of mankind, none has been more effectual than that which deludes them with paper money.* This is the most effectual of inventions to fertilise the rich man's field by the sweat of the poor man's brow. Ordinary tyranny, oppression, excessive taxation, these bear lightly on the happiness of the mass of the community, compared with fraudulent currencies, and the robberies committed by depreciated paper. Our own history has recorded, for our instruction, enough, and more than enough, of the demoralising tendency, the injustice, and the intolerable oppression, on the virtuous and well-disposed, of a degraded paper currency, authorised by law, or in any way countenanced by government.'

Mr. Lee very forcibly exposes a fallacious argument in favour of the existing monetary system of the United States, and says—

"It may seem superfluous to add, that down to this period of time, notwithstanding what has happened in reference to our pecuniary difficulties, the public have been satisfied of its soundness and its sufficiency—or they would not have continued to endure the system.

"*This country has prospered in a higher degree than any other country.*

"The currency consists almost entirely of paper promises, created without limits by banks, and administered by banks, without control, or without accountability;—therefore the monetary system on which the country has acted, and is now acting, *is the cause of its unexampled prosperity.*

"This is the reasoning process by which the country—by which a nation of 18,000,000 of people claiming more than a common share of general cultivation and

knowledge—have been persuaded—perhaps, we may rather say, *led*—not only to tolerate and endure, but to support and encourage a system which, whatever appearances may indicate to the contrary, has been productive of an enormous amount of pecuniary and moral evil.

“That the country has prospered—and that banks and paper promises have existed—are truths too evident to be denied; but the admission of the truth of these assertions does not necessarily imply a belief in the truth of the inference drawn from that admission.

“That the premises of these reasoners are true, it is admitted, but to establish their conclusions upon a sure foundation, it must be shown that what they term *cause*, is any thing more than a mere *coincidence*. This, so far as we have in remembrance the essays of the most ingenious advocates of the system, has never been attempted. They have relied on the ‘*argumentum ad ignorantiam*,’ and the ‘*argumentum ad populum*.’

“The inconclusiveness of the reasonings on the subjects of banking and currency to which reference has been made, may be illustrated by a case where its fallaciousness and absurdity will be made manifest to the most uninformed and the most unreflecting mind.

“The lands bordering on the river Nile, in Egypt, are remarkable for their fertility.

“The pyramids are near the banks of the Nile; consequently, the pyramids are the *cause of the extraordinary fertility of the lands on the borders of that river*.

“Here is an instance where the facts are so notorious, or so accessible—namely, that the extraordinary fertility of the land in question arises—not from the presence of the pyramids, but from the overflowing of the Nile—that no one could be deceived, or long remain ignorant of the true cause of that fertility; consequently, the falsity of the reasoning which attributes the quality of the soil to another cause, is instantly perceived and refuted.

“Nevertheless, in spite of the supposed power of the reasoning faculties over the opinions of men, is there any one who will doubt, after what has been seen in this country, that Mehemet Ali, if he were to summon his followers to a caucus, convention, or to a mass meeting;—is there, we repeat, any doubt that this friend of the people, with his priests and politicians, if he had any point to carry, favourable to his own views, and prejudicial to the welfare of his subjects, that he could demonstrate to their minds the unreasonableness of attributing the productiveness of the soil to the effects of the river inundations? Is there any doubt—on the supposition that the leading politicians and statesmen of Egypt are as remarkable for their extensive knowledge and their great logical powers, as have been evinced by many of our great men, on the questions of political economy—that the people might be prevailed upon to drain off or fill up the Nile—and to cover the country with pyramids, in order that the whole land might enjoy the fertilising effects which they had shown to have been caused by the pyramids already existing in the vicinity of the Nile?”

To the absolute measures of President Jackson, for they were as much so as if the spirit of Napoleon had directed them, has been imputed the ruin of the bank of the United States. The *prestige* which it possessed in public opinion as the deposit bank of the United States revenue, vanished immediately after the president transferred those deposits to the respective state banks. But its downfall could not be prevented, even by the most skilful management of the most influential, as well as most able of those who wielded the prevailing banking principles of the United States. Mr. Lee, speaking of this remarkable man, says:—

“Perhaps the most influential person in the United States upon the subject of banking is Mr. Nicholas Biddle; and though, from circumstances not necessary to detail, some of the influence and authority formerly exercised by him over the public mind may be diminished, yet the banking principles on which he acted are still those which are acted upon through the country—not, as we have before said, could that gentleman have

retained his station at the head of the United States Bank, had he conducted its concerns on what might justly be considered safe and sound principles of banking.

"If the results of the operations of the United States Bank have been disastrous, so have been those of multitudes of smaller institutions which have not had so many obstacles to overcome and so many causes of embarrassment as a bank with an unwieldy capital and numerous branches—many of which were beyond the control of the parent bank. If the nation had been so unwise as to have established a third bank, with the enormous capital assigned to it in some of the schemes before the public, it is doubtful if the country would have escaped from the evil effects which must always flow from such an institution, without much more ruinous consequences than have been experienced from the mismanagement of the late United States Bank.

"In referring to Mr. N. Biddle's communications we go to the highest authority in the nation in support of the popular system of banking; and it is on his statements and reasons in defence of that system, that the prominent party men have leaned for their facts and arguments. This will readily be perceived to be the case on comparing their essays and speeches with his various writings upon the subject, except in some instances, where Mr. Biddle maintained doctrines in opposition to those which he has of late years advocated."

In a communication dated April, 1838, Mr. Biddle enumerated among other causes of the suspension, and it is the first which he put forward:—"The issuing of the specie circular, which forbade the receipt of any thing but gold and silver at the land offices."—In several of the speeches of Mr. Webster, the specie circular and its effects upon the currency, is the most prominent topic. In a debate upon a motion in the senate of the United States, to rescind the treasury order, on the 21st of December, 1836, Mr. Webster, in referring to the effects of that measure in preventing a flow of coin from the states where the proceeds of the lands were received, made the following remarks:—

"The agricultural state of Indiana, for example, is *full of specie*; the highly commercial and manufacturing state of Massachusetts is severely drained. In the mean time, the money in Massachusetts *cannot be used*. It is waiting for the new year. The moment the treasury grasp is let loose from it, it will turn again to the great marts of business; that is to say, the restoration of the natural state of things will begin to correct the *evil of arbitrary and artificial financial arrangements*. The money will go back to the places where it is wanted," &c. &c.

Mr. Lee denies that the specie circular had any such effects, and says that—

"The state of Indiana is one in which the land sales were made to the largest extent—and on that account it was probably selected by Mr. Webster as containing a considerable portion of that *immense amount of coin of which the Atlantic states had been deprived by the specie circular*. That document was issued on the 11th of July, 1836, and was to take effect on the 15th of August, succeeding—and consequently it had only been in operation about four months, during which time the coin must have been accumulating from the proceeds of the land sales. The question now is as to the amount of coin on deposit for the account of the government in the state in question. To ascertain that fact, there are no documents to which we can refer; but by an official statement we find that the whole amount of coin in the banks of Indiana, in November, 1836, was 1,204,737 dollars. There are no other returns till May, 1837, when the amount was reduced 1,196,187 dollars. Here, then, is the immense amount of treasure, on the supposition that the whole of it belonged to the government, from which such great relief was counted on by Mr. Webster, had it not been retained in Indiana by the specie circular. But how could even this insignificant sum be spared from the banks of Indiana, or be obtained from them, when their liabilities amounted to 4,709,000 dollars?"

Mr. Lee then describes the condition of the banks of New York, New Jersey, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, and Florida, and then concludes:

"From banks in such a condition, it would have been impossible to have drawn much of their exhausted supply of coin without causing a suspension. Indeed, the universal suspension of 1837 commenced in the New Orleans suspended *previously* to those of the city of New York, in a much stronger condition than the New York banks.

"The banks of Louisiana, all of which are situated in New Orleans, show liabilities, in May, 1837, to the amount of 16,739,689 dollars, and assets amounting to 2,327,851 dollars. The returns from the banks of New Orleans at the end of May, 1837, show deposits of coin to the amount of 38,862,551 dollars. But the superiority of the New Orleans banks, in comparison with those of the other states, is strikingly evinced by a reference to the following statement of the condition of the banks in the months anterior to the suspension of cash payments:—

BANK RETURNS.		New York, January 1, 1837.
		dollars.
Bank capital.....		37,101,463
Circulation.....		24,198,000
Deposits.....		30,883,179
Coin.....		6,537,020
Loans.....		79,313,188

"If the banks of New Orleans, which were in a much stronger condition, can be placed on official returns, than those of New York, the pressure upon them, with 2,327,851 dollars of specie in hand, will be expected that the banks in the inland states, to which we have referred, in no better condition than the New Orleans banks, could be expected to sustain for all, or for any considerable portion, of their deposits of treasure.

"The desperate condition of the banks of the four principal states, on the Atlantic, which we have supposed may have been reinforced by the whole amount of coin in the states and territories, where the suspension of cash payments was collected, will be seen by the following statement. The returns from the banks come down to October, 1836, and of the other banks to

PLACES.	Loans.	Circulation.	Deposits.
	dollars.	dollars.	dollars.
Massachusetts.....	56,613,171	10,892,249	8,744,516
Maryland.....	14,986,447	3,310,835	4,640,477
New York.....	79,313,188	24,198,000	30,883,179
Pennsylvania.....	101,995,662	23,242,082	15,234,650
Total.....	252,934,568	63,643,166	59,742,822

"Here is an official statement showing the condition of the banks of the four principal states, which were formerly considered as being conducted with more skill, than any of the numerous institutions in the country, and, perhaps, the banks in the city of Philadelphia, that was a correct opinion. Philadelphia, save the United States Bank, were in no worse a condition than the other cities we have named, till after the suspension of 1837. Barrassed by a connexion with the Bank of the United States, Pennsylvania, which has proved ruinous to their shareholders, they apprehend that the banks in the city of Philadelphia, going into suspension, were managed with rather more prudence than those of any other city. We believe an investigation into the comparative banking of the country, will show the correctness of that assertion. As a consequence, it may be a fact, we should venture to say, that in no city of the United States have the actions of business been conducted with more industry, caution, and with better results, especially in its great inland commerce.

The bankruptcies have been few in comparison with those in most of the great marts of trade, and especially among that portion of its community who are engaged in the regular and staple branches of industry. The losses by failures, we have reason to believe, from long personal experience, and, still more, from inquiries among persons having ample means of judging, to the manufacturers and merchants of New England, on whose account an immense amount is annually sold in Philadelphia, are smaller, in proportion to that amount, than in any other place in the union, not even excepting the capital of Massachusetts."—*Letters to Cotton Manufacturers.*

In regard to the operation of the United States Bank, in regulating the currency of the country, it has been generally admitted that its affairs were often far less discreetly managed than were those of many local banks. Mr. Appleton says:—

"The great and difficult problem in a currency of bank paper, is the prevention of those fluctuations to which experience shows such a currency is liable, in a far greater degree than a currency composed wholly of the precious metals." "Severe revulsions," the same writer observes, "took place in 1826, 1829, and 1832, in which the Bank of the United States took its full share in the expansions which preceded them."

Mr. Lee remarks—

"The removal of the public deposits from the United States Bank to the local banks was the reason assigned for the extremely severe pressure in the money market, which existed between the autumn of 1833 and the summer of 1834. The removal of 10,000,000 dollars of the public deposits, rendered it necessary that the United States Bank should contract her loans and liabilities, but such an operation, performed as it was, or which it might have been, upon the previous notice given of such an intended transfer of the public funds, would not have caused any great inconvenience to the trading community, had not the United States Bank been placed in an insecure position by her previous over-issues and excessive loans. This assertion, namely, excessive issues of the United States Bank, does not rest upon conjecture, but on the official returns of that institution, as will be seen by the following statement:—

RETURNS.	1st of January, 1831.	1st of January, 1832.	1st of January, 1832.	1st of January, 1831.
	dollars.	dollars.	dollars.	dollars.
Loans.....	44,032,057	66,293,707	61,665,913	54,911,461
Circulation.....	16,251,267	21,355,724	17,518,217	19,208,379
Deposits.....	17,297,041	22,761,434	20,347,749	10,838,555
Coin.....	10,000,000	7,038,023	8,951,847	10,031,237

"The sudden and enormous extension of the liabilities and loans of the United States Bank, to the extent of fifty per cent on its loans and thirty-three per cent on its liabilities, within the period of one year, and, as may be seen by returns of the local banks, a somewhat, though a less extravagant, enhancement of their loans and liabilities—placed the currency in such an inflated condition as to have afforded a sufficient cause for the revulsion of 1834. It is true, the removal of the deposits hastened the measure of contraction which was the proximate cause of the pressure of 1834. If, however, the deposits had not been removed, either the contraction must soon have been made, or, by further issues of paper, such a measure would have been found unavoidable at a subsequent period; or, if otherwise, the universal bankruptcy of the banks which occurred in 1837, would have happened at a somewhat earlier period.

"But the statement we have furnished of the imprudent conduct of the United States Bank, while, according to the views commonly taken of the matter, that institution was regulating the currency and the exchanges of the country; the facts, we say, which have been adduced, discreditable as they are to the managers of a bank on which the country relied for its restraining power and its conservative principles—as respected the local banks—do not reveal the full extent of the folly and the imprudence of which that institution was guilty.

"The *Regulator*, indeed, so far from performing the office of regulating the move-

ments of these banks, was, in truth, a great and efficient *dis* more especially of the banks of New York and Baltimore, Philadelphia.

"I am aware," says Mr. Van Buren, "it has been urged (operations of the local banks), may be best attained and exercised by a national bank. The history of the late national bank, through all its vicissitudes, was not so. On the contrary, it may, after a careful consideration, I think, safely stated, that at every period of banking excess, in 1817, and 1818, in 1823, in 1831, and in 1834, its vast extensions and contractions, led to those of the state institutions. It was a part of the banking system, but seldom allayed or safely controlled. In periods only was a salutary control exercised, but an eagerness for gain exhibited for profit in the first place; and, if afterwards its measures differed from other institutions, it was because its own safety compelled it to differ from them in principle or in form; its measures emanated from a desire for gain; it felt the same temptation to over-issues; it suffered from the same laws of trade, by which it was itself controlled; and at least, on one occasion, at an early day, it was saved from the same fate that attended the weakest institution. In 1837 it failed, equally with others, in redeeming its notes, not allowed by its charter for that purpose had not expired, a large part of its liabilities to the present time outstanding. It is true, that having so long been sustained by the use of all the revenues of the government, it was, while it was itself, by that circumstance, freed from the control of the public, its paramount object and inducement were left the same—to the holders—not to regulate the currency of the country. No other bank, I am advised, been found to be greatly otherwise elsewhere. The Bank of England has not prevented excessive fluctuation of the currency; it proved unable to keep off a suspension of specie payments for a quarter of a century."—*Message*, 1839.

"Can any person having a common acquaintance with the history of banking, be at a loss for a reason why there should have been a great market arising out of such an enormous expansion of the late national bank, whenever it became necessary for its safety to contract its loans and liabilities? The imprudent conduct of this leading institution, corresponding over-banking in many, if not most, of the local banks, was the efficient cause, then, of the pressure of 1833 and 1834, and the consequent expansion of the loans and liabilities of the United States Bank generally throughout the country, which rendered necessary, on the part of those banks to save them from a suspension of specie payments."

"The removal of the deposits, had the Bank of the United States been in a sound and safe condition, would not have disturbed the operations of the local banks to an inconvenient degree, nor have placed the whole commercial system in a state of embarrassment or ruin; the effect on the general monetary concerns of the country threw the actions of the nation into a state of confusion and disorder with injurious consequences.

"Notwithstanding the existence of these facts, which, however generally known to the public, the monetary difficulties of the late period were attributed by politicians, and generally by the public, wholly to a transfer of about 10,000,000 dollars from the United States Bank to the local banks in the places where that institution had its branches."

"But now that the facts are before the public—facts taken from the history of the United States Bank, which show its perilous condition during the late period of the removal of the public deposits—with such evident and imprudence of that institution, it must, we conceive, be in the mind, that the main, the effective cause of the monetary and

existed between the autumn of 1833 and the summer of 1834, may be traced to the gross mismanagement of that establishment."—*Letters to Cotton Manufacturers.*

Mr. Lee, in remarking on Mr. Appleton's "Remarks on Currency and Banking," says,—

"Mr. Appleton, who, although a party man, in the proper and best sense of that term, is not the slave of a party, nor the tool of the leaders of a party, has argued the subjects of banking and currency upon their own worth, is among that, perhaps fortunately small body of persons who are pretty generally denounced by the true, well-drilled party men, for what they term a *pertinacious* adherence to sound doctrines and an honest policy, although convinced that they are not in unison with the current opinions of their political associates and personal friends; nor, what is of infinitely more importance, in accordance with the interests of their party.

"In some countries where the 'march of mind,' and the march of morals, has not been so rapid as in this enlightened and 'go ahead' federal republic, such evidences of intellectual independence and moral rectitude would be pardoned if not praised; but in a free, democratic country, whose citizens boast of a degree of liberty, and a species of liberty, heretofore unknown, nothing can be more unpopular than such a violation of party discipline, as is implied in the assertion of an opinion which runs counter to that of the party to whom one belongs. Such a mutinous proceeding is especially offensive, if the delinquent should be thought to be indued with an unusual share of moral and intellectual discernment, that would enable him quickly to distinguish, in difficult cases, truth from falsehood, and consequently who ought, upon party principles, to give the first example of party patriotism, by making the former subservient to the latter, whenever the interests of party, or of the party idols of the people, shall appear to require such a patriotic sacrifice of principle.

"Another argument most dwelt on (observes Mr. Appleton) in favour of a large national bank, is its necessity to equalise the exchanges. There is not much in this. There is no difficulty with the exchanges where the banks pay specie. There lies the whole difficulty. Let that be reformed, and there will be no complaint on that score. The exchanges soon regulate themselves where the currency is uniform, as is the legal currency of the United States. A large bank, with many branches, can manage the exchanges with *more profit to itself*, perhaps, than the local banks can do. The late United States Bank took care to charge the highest rates of exchange which the alternative of transporting specie would admit. For several years the exchange at New Orleans on northern bills was kept so high that considerable shipments of specie were made from Boston and New York for the purchase of cotton!"

"When these remarks of Mr. Appleton's were written, the currencies of the whole country out of New York and New England, were in a depreciated condition,—and the nation was told, in thousands and tens of thousands of those instructive orations, delivered in Congress, in caucuses, and conventions, upon the currency question, that neither the currencies could be raised to their proper value, nor the exchanges brought to a par level, without the aid of a national bank—a central bank, which was to 'regulate the exchanges'—and how was it to be done? Why, by substituting acts of legislation, founded on the *wisdom of Congress*, for the *laws of trade*—laws emanating from a source for which legislators, as might seem from their sentiments, have usually shown very little reverence, and still less practical regard, in their legislative acts, upon the presumption that they are not wholly ignorant of the laws of trade, and all other laws, to which reflecting and honest men hold themselves accountable in the formation of those opinions and resolutions on which the actions of reasonable and reasoning beings are founded.

"In spite of the predictions of politicians and of bank managers, who, in most cases, concurred with them, or appeared to concur with them, the exchanges came round, namely, *came into their natural state*, as Mr. Appleton told his readers they would do as soon as cash payments were resumed."

Upon the same point, Mr. Gallatin, in the "Report of the Union Committee,"

of which he was the author, published March 18, 1834, makes the following remarks :—

“ The threat of the removal of the deposits, and especially the actual removal, created apprehensions of danger, immediately to the bank itself, and more remotely to all the moneyed institutions and concerns of the country. Retrenchment at all, and rigorous enforcements of its claims at some points, were presumed to be indispensable to the safety of the bank ; and the extent being conjectural, was exaggerated by timid capitalists, who, as a class, are more fearful than men of less wealth. Men saw that the relations between the government and the bank were henceforth to be hostile ; that between it and the *selected banks* they were to be those of mistrust, and that without a national bank the stability and safety of the whole monetary system of the country would be endangered. This was the first instance in the history of our government of a direct interference of the president with one of its officers, in the performance of the duties which by law devolved exclusively on that officer. It was the more dangerous, as being in defiance of a solemn vote of the late Congress at their last session : and as if with the intention to forestall the opinion of that which must meet within sixty days after the interference was made, and as if to encroach on its legitimate rights.”

“ If the facts which have been disclosed to the public, relative to the operations of that institution, had been before Mr. Gallatin when he drew up the report of 1834, he would, we conceive, have come to the conclusion that the enormous extension of the loans and liabilities of the bank must have soon forced upon it a large reduction of them, even if the deposits had not been removed. Or, if such a reduction had been protracted, the only effect would have been a general suspension in anticipation of that which actually occurred in May, 1837, in which the United States Bank would have led the way. It is admitted, that under Mr. Cheves' administration the bank was in a sound and safe position, and one from which she never should have materially departed, if it was the intention of the bank to be in a condition to prevent the over action of the local banks, and such always has been the professed purpose of that institution.

“ Here is a comparison between the average returns of the bank for the years 1820, 1821, 1822, and 1823, the period of Mr. Cheves' presidency ; and the years 1832 and 1833, the period preceding the monetary and commercial pressure that commenced towards the close of 1833, and continued till the summer of 1834 :—

DESCRIPTION.	Average Returns, 1820 to 1823.	Average Returns, 1832 to 1833.
	dollars.	dollars.
Loans.....	40,032,037	63,994,810
Circulation.....	4,525,343	19,451,971
Deposits.....	7,540,793	21,554,591
Coin.....	5,055,517	7,994,935

“ The loans in 1830 were 52,274,095 dollars ; the circulation 12,924,145 dollars, and the deposits 16,045,782 dollars.

“ It was this departure from all sound principles of action, which occasioned the transference of 10,000,000 dollars of deposits from the central bank to the local banks, to be so oppressive in its effects upon the business concerns of the country. It was also a like extension of its loans and issues in 1836 which, in connexion with the like overaction of the local banks, led to the suspension of cash payments in 1837. In 1836, the loans of the United States Bank, with a capital of 35,000,000 dollars, amounted to 59,232,445 dollars, and the circulation to the enormous amount of 23,075,422 dollars, being more than five times as large as the average amount of its issues during Mr. Cheves' administration. The same year, 1836, the banks of the six New England States, with an aggregate capital of 59,471,991 dollars, had in circulation 21,811,762 dollars, and yet her currency was in a redundant state, although, from the great money capital of this section, and the nature of its employments, a larger amount of currency is required to circulate its products, in proportion to its population, than in any other section of the union.”

Mr. Gallatin, in his publication of 1841, says :—

"It would be idle to inquire whether, if the charter of that institution (the United States Bank) had been renewed, and if it had been the sole place of deposit of the 40,000,000 dollars of public moneys, the suspension might have been prevented. That would have depended entirely on the manner in which the bank might have been administered.

"That institution had ceased to be a regulator of the currency as early as the years 1832, 1833, when its discounts and other investments were increased from 55,000,000 dollars to 65,000,000 dollars, that is to say, at the rate of eighty-five per cent beyond its capital; whilst those of the sound banks of our great commercial cities did not exceed the rate of sixty per cent beyond their capital. It is not necessary to inquire whether this expansion was the natural consequence of the course of trade; whether the Bank of the United States was in any degree influenced by considerations connected with its own existence; or whether the machinery carried away the directors instead of being governed by them. It is obvious, that it is only by keeping its discounts at a lower rate than those of the state banks, that these can be debtors; and that it is only by enforcing the payment of the balances that it can keep them within bounds, and thus regulate the currency. A contrary course will induce the state banks to enlarge their own discounts, and will engender excessive issues, followed by necessary contractions and unavoidable distress."

"The United States Bank had not only ceased, in 1832 and 1833, to be a regulator of the general currency of the country, as indicated by her excessive issues and excessive loans, but the affairs of that institution were, through most of its career, conducted with less prudence than those of the leading banks in the commercial cities. The existence of that bank was prejudicial in its effects, upon the currencies of all the Atlantic states, and especially upon the currency of Pennsylvania, most of which emanated from the banks of Philadelphia. It threw the business of the banks of that city into disorder, prior to the suspension of 1837, by encouraging an undue extension of their liabilities. It induced them, subsequently to that event, to encourage a continuance of the suspension of 1837, to suspend again in 1839, and to aid the United States Bank in its endeavours to constrain the banks of New York to join in that second act of suspension.

"To the banks of Philadelphia, as well as to the general business concerns of that city, the late United States Bank, both in the early stages of its history as well as in its latter days, has been a source of immense injury. 'Philadelphia,' says Mr. Gallatin, in his last work; 'had a sound capital, greater in proportion to its commerce than that of New York, or of almost any other city in the union; its banks proper were sound and cautiously administered; not one of them had ever failed. But they have for several years been pressed by two great evils—the United States Bank and the state legislature. They have at last got rid of the first burden, from which they ought to have detached themselves long ago.'

"It is true that the state of Pennsylvania has got rid of the United States Bank, whose operations, directly or indirectly, have been the main source of pecuniary embarrassments and losses to which the city of Philadelphia and the state of Pennsylvania have been subjected, beyond those which, under the vicious system of banking and currency on which the country is acting, must have otherwise fallen to her share. The Pennsylvanians have got rid of what Mr. Gallatin has termed a '*public nuisance*,' with reference to the results of its operations—but it is to be feared they have not yet repudiated the unsound principles of banking and currency which, in compliance with the prevailing popular notions upon these subjects, were carried out to their fullest extent by the managers of the United States Bank, and by all the other banks of Pennsylvania. It is to be apprehended, we repeat, that the same erroneous views of currency and banking, which led to the late ruinous results of their imprudent and dishonest banking, as well as those which were endured from similar causes by the banking operations of 1814 to 1820, are still in existence, among that class of influential and leading persons who, however ignorant upon subjects of currency and banking, they may appear to be to the well-in-

formed, continue to lead the public mind on those important questions we have been led by numerous resolutions passed at the management of influential party leaders, and by the almost universal business community, as far as it has found expression through the press, which, not only in Pennsylvania, but in every section of the country, have been at all times, as it now is, strongly in favour of the policy of management and banking on which the whole nation, for the past thirty years, has been acting.

"It has often been said, and constantly reiterated, by the friends of the bank, and the apologists of the late United States Bank, that the government which led to its subsequent errors. So weighty due to such an assertion, we conceive that the disjunction of the government, which took place prior to the expiration of its charter, was extremely favourable to its safe and independent action. Pennsylvania, it was under no obligations to maintain its national bank. Indeed, it is well known that they were difficult of establishment, made were, in the early stages of the bank, as well as in its later stages, of a character inferior in safety to those on which banks usually transacted business in Atlantic cities—and their losses were, therefore, much greater.

"It was alleged by the partisans and advocates of the bank that the agent of the government would curtail its means of loaning and that such a denial that such must be the consequence of the withdrawal of the bank. Such a change in its circumstances did not furnish any reasonable basis for a wise course of action, on the part of its conductors, nor decrease the value of its issues and its loans on a safe and prosperous footing. In such a condition, 'its loans and its profits,' as Mr. Gallatin has said, should have been reduced to the amount corresponding to the amount of its capital.

"Again, it was said and repeated in thousands of speeches and communications with the public, that as the credit of the bank rested on the government, the character of its circulation would become impaired if it lost its 'national odour,' as the phrase ran—its shares would consequently be rendered powerless, as a regulator of the market, and the manager of the exchanges.

"That the credit of the bank was not injuriously affected by the change in prices at which its stock was sold after the re-charter. The shares were eagerly purchased by the people of Pennsylvania, at a high price, and upwards. They continued to maintain their value till the expiration of the bank, March, 1839, at which time they were current in the New York stock markets at 116. That high rate was produced by the eight per cent dividends, from which it was naturally inferred that the bank were in a safe and prosperous condition. The shares continued to hold their value long after the expiration of its first charter, nor were there the slightest degree of discredit in consequence of a dissolution of the bank by the general government. On the other hand, it is well known that the United States Bank and its most intelligent directors entertained, from the first, a favourable opinion of the advantages and of the prospects of the bank, and had previously entertained while acting under a government charter.

Such were the circumstances which deceived the foreign and domestic investors, and which made them continue to hold their shares or stock in the bank under its old charter. Its credit was supported by deceptive principles, and a thorough investigation of its actual *bona fide* assets and capital, would have exhibited its unsound condition, and would have ascertained that its business was conducted with unpar-

"The loans of the United States Bank were principally made in the country where it is difficult to find securities upon which a bank can lend with safety. Even the first United States Bank, with 10,000,000 dollars, with but few branches, and those under

experienced, prudent, and skilful persons than had charge of the branches of the late United States Bank anywhere, save in a few of the Atlantic cities. Even that well-governed institution, which had only the competition of some thirty to fifty local banks, that were conducted with as much prudence, and integrity, and success, as the national bank, suffered severe losses in some of its branches, and it could not have prospered had not those losses been more than counterbalanced by extraordinary gains in other places. But that bank was managed on principles very different from those acted upon by Mr. Biddle, or by any other persons in charge of the late United States Bank, except Mr. Cheeves, and he became unpopular because he acted upon conservative principles.

"The late United States Bank, as the disclosures of its conduct and of its fate have most clearly shown, owes its ruin, not to the violation of its charter by the government, nor to the removal of the public deposits, nor the issue of the specie circular, nor to the political hostility of party men. The primary and operating causes of the mistakes, misdemeanours, misfortunes, losses, and the final destruction of that establishment, may all be traced to a violation of those sound, prudent, and honest principles of banking, currency, and credit, through almost every stage of its existence, which ought to have governed the feelings, opinions, and conduct of its administrators."

"In a country where, owing to the existence of a paper currency of so low a denomination as one dollar, there never can be any considerable amount of specie in circulation; and where also their reserves of coin, when the banks are in their ordinary condition, do not exceed one-sixth or one-seventh the amount of their liabilities. It follows, we repeat, that the only security against sudden commercial pressures of a ruinous severity, succeeded by revulsions and bank suspensions, is for the issuers and managers of the currency to keep down its circulation to a level with the sound currencies of those countries with whom we have commercial interchanges.

"To revert to what Mr. Gallatin has alleged against the United States Bank, for its share in producing the suspension of October, 1839; we do not mean to deny that her operations were more instrumental than those of the local banks, but we have shown that the New England and New York banks were culpable, and so were the banks in all the states. There was an universal disregard to all considerations of prudence on the part of the managers of banks, as regarded the safety and interests of the shareholders, and of the public as recipients and holders of their issues, and of the business community generally as interested in having the circulating medium of the country maintained in that stable and sound condition so essential to their prosperity.

"'On the 1st of April, 1839, the foreign debt of the bank,' says Mr. Gallatin, 'amounted to 12,800,000 dollars, and the various stocks owned by it to near 23,000,000 dollars, of which 6,300,000 dollars, consisting principally of *Mississippi and Michigan stocks*, and previously contracted for, were not yet entered on the ledger. Its credit had, indeed, been artificially sustained; and its stock was selling at a considerable advance. It was, nevertheless, on the verge of destruction. In August of the same year, it was compelled to issue post notes, which soon fell to a discount of more than one per cent a month. In September the bank drew largely on Europe without funds, and partly without advice. In order, if possible, to provide funds for that object, and also, as has been acknowledged, for the purpose of breaking the banks of New York, payment of the bills thus sold in that city was suddenly required in specie, and the amount shipped to Europe. The attempt was a failure in both respects:—the banks stood, and the bills were dishonoured. On the 9th of October, the United States Bank suspended its payments, and it is not improper to observe, that a fortnight later another attempt was made under its auspices, by the debtor-interest of New York, to compel the banks to expand their discounts, and thus prepare the way for another general suspension. The banks, as might well be expected, unanimously refused to yield.'

"In the criminations and recriminations, among the parties connected with that ill-managed and ill-fated institution, the facts—discreditable as they are to the persons concerned in the act alleged against the bank by Mr. Gallatin—are admitted to have been correctly stated. In a letter from Mr. Cowperthwaite, cashier of the bank, to Mr. N. Biddle, its former president, there is the following passage:—

"'After the feverish excitement consequent on this too speedy effort to return to cash

payments (in 1838) had in a good degree subsided, another calamity was feared that the banks generally would be obliged again to resume specie payments too soon to be realised, for the storm was then ready to burst with all its full force at once, it was deemed best to make it fall in New York. To effect this purpose large means were necessary, and recourse was had to the sale of foreign exchange. The state of the agents abroad, did not warrant any larger drafts upon them than Messrs. Hottinguer in Paris. This difficulty, however, it was thought might be overcome by shipping the coin to be drawn from the New York banks immediately. Accordingly large masses of exchange, particularly bills on London, of great demand, were sent to New York to be sold without being signed in blank, and so sent to New York, and although the supply was soon exhausted, and application was made to the agents at home in New York, for a further supply, who drew a considerable sum from the proceeds of these immense sales of exchange created by the New York banks, which after all signally failed in its object.

"In Mr. Biddle's comments on Mr. C.'s communications, a plan of regulating the currency and the exchanges:—

"Here, then, is revealed the real and secret causes of the crisis. Now, without meaning to say a single word about the object of the plan, or intending the slightest censure of any one, it is impossible to suppose, in any circumstance, the solution of many difficulties of the bank. The bank suddenly draws an immense amount of bills on Messrs. Hottinguer and Company out of their hands—without having a dollar—without a line of explanation as to the nature and amount of the drafts—and without even the usual commercial notice that Messrs. Hottinguer and Company could not, as prudent men, cash these bills; and thus the bank, in the very fulness of its credit, is in the eyes of all Europe. The talents of Mr. Jaudon repair the disaster,' &c.

"What was the '*disaster*' referred to by Mr. Biddle, *with- out tending to censure, in the slightest degree, any one concerned in it?* Why, according to his own statement, and the confession of the cause of that *disaster*, as it is termed, was the failure, in New York, to obtain money by dishonest expedients, for the purpose of breaking through the difficulties and embarrassments, and the profligacy and im- prudence and misconduct of the United States Bank, that it was a dis- grace to the public, as holders of their bills; and what, more important, in order to prevent the monetary concerns of the country, from falling into the ruinous and *hopeless* condition into which they had fallen, and the pecuniary concerns of all the other states of the union.

"Another disastrous event, in the latter stages of the existence of the Bank, was the *first resumption* of specie payments. This was effected in New England, in May, 1838, and in Pennsylvania, and Missouri, in August, 1838. Mr. Cowperthwaite, in explaining to Mr. Biddle, on the 29th of March, 1839, when the latter gentleman was in New York, that the Bank was '*strong and prosperous*'—should, in less than two years after its establishment, have a capital of 35,000,000 dollars—its reserve fund of 4,421,289 dollars or more in the form of unredeemed circulation and dis- counts, and over-advances in Europe on depreciated or worthless securities. Mr. Dunlap, says, 'The utter prostration of the Bank of America is, I confess, my comprehension! I may, however, point out some of the causes, which, I judge, have mainly contributed to bring about its present situation. The first cause,' he continues, 'may be traced to the premature resumption of cash payments, after the first suspens-

Notwithstanding the ruin which the failure of the bank of the United States extended over the country, and the suspension or bankruptcy of banks in each state, a desire was soon after manifested for establishing a national bank. On this subject, Mr. Lee remarks :—" *That banks as they have been managed—have been among the retarding, and are not to be reckoned among the accelerating, causes of the accumulated wealth of the country. That reasonable proofs are found in treatises and essays of our own writers, that the currency as it has been managed by the banks the last thirty years, has cost the country more money than the whole peace expenditure of the government would probably have amounted to, under a metallic currency, or a mixed currency, so managed as to be subject to no greater fluctuations than are incident to a metallic currency.*"

The chartering of a national bank soon became a great party question.

Mr. Webster in a speech made to his fellow-townsmen in Boston, admitted that a bank founded upon the principles of the former one, was unattainable and inexpedient. "A bank (said Mr. Webster) founded on private subscriptions, is out of the question. That is an obsolete idea, and people who are working for power to make a bank of the United States, may as well postpone all attempts to benefit the country—to the coming of the Jews."

"It was, however," says Mr. Lee, "under pledges of establishing a bank, that the party to which Mr. Tyler belonged came into power; and he was, as has been maintained, as strongly committed in favour of such an institution, as any of their political leaders.

"The establishment of a national bank was, during the canvass for the presidency, held up by the contending party which prevailed, as of great importance to the welfare of the country, and the obtainment of a charter for one, was considered as one of the expected benefits that would ensue from a change of administration. Such an institution was not only called for by the party in power; but was pretty universally wished for by the mass of the people in all quarters, although many of the party leaders affected to be opposed to a bank, and some of them were sincerely so, in both the great divisions of parties.

"The scheme of a bank presented to congress by Mr. Clay, would, in fact, whatever might be the intentions of its projector, have been a political bank, with the means of extending those corrupting influences over public men, which are already too abounding for the slight resistance likely to be made to temptations held out to *armies of patriotic persons*, who, fancying they were born to be supported by the nation, would think it *was unjust if they were not allowed to carry off a large portion of the 50,000,000 dollars, capital, in exchange for their accommodation notes.* Such an ordinary banking incident would, however, have been but a slight evil in comparison with the effect of its operations in aiding, as did the late United States bank, the local banks to extend their loans and issues.

"*An inflation of currency would have raised the prices of goods; this would have led to over-importations, and to diminished exportations. The result of that state of things would have been another commercial and monetary pressure—caused by a demand for the coin of the banks, to pay up a balance against us for an excess of importations.* The banks would have paid out part of their coin, but as that could not have been done without breaking down prices—and consequently embarrassing all the debtor part of the community, and ruining a large portion of them; why, in such an emergency, the banks would have been called upon to suspend.

"From 1833 to 1837, the currency of the country, as we have before shown, was in a constant state of expansion. It was, also, always in excess, as compared with the currencies of other countries. So long as this progress of augmentation continued, all who bought and sold had an opportunity of increasing their nominal wealth, namely—the

*money value* of their property, because the prices of commodities, in more or less degree, though not in proportion, as we have before remarked, increase of the currency.

"So long as this unnatural abundance of money (concomitant, an abundant credit, continued, prices of every commodity in comparison with the prices of the same commodities prior to the increase of the currency. This increase of *prices* of commodities, as far it arose from the increase of the currency, was not an *augmentation of value*."

We agree with Mr. Lee, for there cannot be a great increase of the *founding price* with *value*.

One of the great moral evils which Mr. Lee exposes, the executive power of the United States, is what is termed the *principle of the executive*," the proper designation should be the *PRINCIPLE OF ANARCHICAL DEMAGOGISM*, namely, the removal of the president, of all men from offices, of every grade, without the consent of his predecessor; such removal having no justification but in the interest of the nation on political questions. This extends to banking questions when such become party questions. In exposing this evil, and in promoting an intelligent administration, we cannot do so more conclusively than by producing the opinions of American citizens. Mr. Lee remarks:

"Now, if any reliance can be placed on information derived from every one, such a principle, such a *democratic principle*, as is claimed by political leaders, and which the present chief magistrate is actually acting on, is not a principle of which the right to exercise is claimed, as in the case of *GOVERNMENTS*—but is nowhere carried into such frequent operation as in a democratic Republic. In Turkey such a '*democratic principle*' is carried upon, with such frequency as among us. In Austria, half of the power is in the support of armies and of a military and civil police, for the command of the monarch, it is not, we apprehend, the principle which carry the '*democratic principle*' to the extent which is now done in this Republic, and which has also been done by some of our soldiers themselves might revolt at what, in *unfree countries*, is too arbitrary, and too destructive of the stability and happiness of government but a republican government."

"In France and Great Britain, whose monarchical governments have been long and free country, hold in such slight political estimation, and in such low repute, the democratic principle of proscribing and punishing persons, carried into such extensive operation as it is deemed right to do, which it is now deemed expedient to do, *would be denounced and reflecting persons of all parties*. The exercise of such a principle would, in those two nations, unsettle and overthrow the popular administrations that ever held the reins of power. It is the power claimed by our democratic rulers, and exercised by them, the most effective causes of the overthrow of the French monarchies, which have occurred in our parent country. And as we are not, as yet, it is to be hoped, less jealous of those rights which were meant to be secured to us, by our constitution, than the island of Great Britain, there must come a time when we shall show as great a dislike of despotism as is now shown by these nations; or, failing in this, a more just appreciation of our rights and our duties than we now show in a state of political degradation and moral weakness which might lead us to maintain the institutions under which we now live,

strength and purity. It would hardly require a succession of many administrations, governed by the principles on which the country has been ruled of late years, and is still ruled, to plunge this too extended a league of nations, poorly qualified, as some of them appear to be, for free institutions, into a state of demoralization and disorganization that would prove fatal to the continuance of the union,—that would prove fatal, not only to the existence of the union, but also to those principles of political morality and of civil government, on which this ill-governed confederacy must hereafter rely for its moral regeneration, and its political re-organization, when it shall be resolved into its several constituent parts, in its rapid advancement to that state of ignorance, corruption, alienation, disunion, and political destruction to which, if we may rely on the teachings of history and of experience, every nation is doomed when, for a long period of time, it has been not under the government of men desirous of promoting the prosperity and welfare of their constituents, but under the domination of a faction, whose personal views and private interests are incompatible with the safety, honour, and happiness of their country.

"In Great Britain and France, a change of ministry involves only a change of the heads of the departments and their chief secretaries. If the principle of removing the numerous subordinates were acted upon, those nations, wealthy and powerful as they are, could not have sustained their political greatness and independence, through the severe trials to which they so often have been exposed. *Experience in the performance of the duties of civil stations, is as essential as it is in the performance of military duties.* Now what chance would there be of succeeding with an army, however numerous it might be, if the principal officers were changed every year or two, and with them a considerable number of the subalterns and a portion of the rank and file, and raw recruits and untaught and inexperienced officers enlisted as substitutes?

"Look at the moral effect of such a disorganizing and cruel principle—cruel as respects the objects of such unjust treatment. If a due and faithful performance of official duties is no security against political proscription and removal from office, what inducement can men of ability and character have to seek or to accept public employment? or, if engaged in that service, to put forth their utmost ability and exertions to serve their country? *And what has been the effect of this demoralizing principle? Why, the history of the past twenty years exhibits, in the fiscal branch of the public service, a degree of corruption and dishonesty, which, considering the circumstances of the country and the small amount of pecuniary responsibility resting upon the revenue officers—in comparison with what exists in some other countries—is without example in any well-governed nation. It amounts to a very large per centage on the gross receipts of the nation, and it is an item of the public burdens which is rapidly increasing. In case of a war, when it might be necessary to raise three or four times as much money as is done under a peace establishment, the plunder of the public revenue would, of itself, be a heavy burden on the country, and especially if there were a national bank to aid by its influence, and its corrupting power, the needy, reckless, and unprincipled men who, in such an emergency, are as active and dexterous in preying upon their country, as they are in stirring up feelings of hostility against foreign nations with a view of producing wars.* The Florida war cost the country some 30,000,000 or 40,000,000 dollars, only a small proportion of which went to the national troops who defended that territory from invasion: while the balance leaked out of the public purse, and was drained off in some unknown, or in some unlawful direction.

"Will any reflecting man advocate a money-coining machine, under whatever plausible name it may be disguised, whether a 'national bank,' a 'fiscal agent,' or an 'exchequer,' either to be under the direct control of the government, or only connected and influenced by it? Are there not, as the government is now administered, and as it has, for some years, been administered, too many sources of corruption available to a large class of public men, without adding to their number?

"The object of a national bank, as far as the government has any connexion with it, is to be able to increase the public receipts without hazarding their popularity by taxation—to borrow the people's money to pay the debts of the people—the result of which,

according to the financial measures of the present administration by the creation of a still larger one.

"Or, if the 'exchequer plan' of President Tyler had the effect would have been to throw upon the country a large paper money, beginning with 10,000,000, and by an extension which may be deemed desirable by this administration or not."—*Letter to Cotton Manufacturers.*

President Tyler in his messages, declares :

"It has now become obvious to all, then, that the government means for supplying its wants, and it is consoling to know that the means are adequate for the object. The exchequer, if adopted, will be about this result. Upon what I regard as a well-founded supposition, that it will be readily sought for by the public creditors, and that the issue will reach the maximum of 15,000,000 dollars, it is obvious that the sum thereby be added to the available means of the treasury with the same effect."

"If it were the object of the 'exchequer plan' to keep the issue at 10,000,000 as it would appear to be the case, then there would be an addition of 5,000,000 dollars to the public revenue derived from this issue of 10,000,000 or what may be better understood by the term of 'continental currency'."

Upon the tendency and object of this financial scheme, Fillmore, the chairman of ways and means, said in reference to the "exchequer plan:"—

"As a bank, then, what are to be its probable effects upon the country? So far as it shall furnish a paper circulation of equal value to the gold and silver it would be beneficial. But, if we are to judge from past experience, it would be done to any great extent, and would not be maintained for a long time."

\* The first Essay, by Mr. Middleton, was published under the title "The Government and the Currency." The following is a paragraph from the first paragraph.

"We have briefly indicated the leading topics considered in this subject of the currency is now so hopelessly overwhelmed by the complications of politics, that calm and temperate writing, like this of Mr. Middleton, fixing the public attention. Still, the work will do good. It is written in a clear and elegant style; the arrangement of topics is excellent; the statistics are conscientiously made; and no trace of the rampant party spirit, with all its dreadful and alarming extent, on all questions of national policy. The object aimed at by Mr. Middleton, namely, 'to combine, as far as possible, the advantages of the metallic with those of the bank-note system,' is a subject which has long occupied the public men of all parties; but the demagogues have served their own purposes, and the minds of the people are filled with ignorance and prejudice, so that they are scarcely capable of acting without manifesting an insane violence against the interests which are sacrificed."—*North American Review.*

"After what we have now said, we think it must appear that we are right, as we did in the former part of this essay, that the only portion of the currency which required legislative interference and regulation, was the issue of bills and notes of banks of issue. We have endeavoured to show the difference between the notes of a bank and those of a merchant or trader (the notes of a bank are payable at an indefinite period; while those of a merchant or trader are payable at a period fixed and certain). We have endeavoured to show that this difference between mercantile and bank paper, and leads to important differences in the effects produced by these two kinds of paper, if left unrestrained by legislative regulation; that while private, or mercantile, paper, which exists for its payment at a given and fixed period, keeps within its own limits, bank paper, on the contrary, is tempted constantly to exceed its limits, not being payable at any definite and fixed period, no such restraint is placed upon it. Bank paper, prompted by the desire of gain, naturally seeks to increase its circulation, and to keep it from returning upon them for redemption for the benefit of the government and the currency."

vernment banking, in all ages and countries, has proved a failure. We believe there is no exception to this rule. To prove this we need not resort to the assignats of France, or the imperial bank of Russia, with its paper rubles, or even the far-famed deposit bank of Amsterdam, which was under the charge of the governors of the city, annually elected by the citizens, and for whose fidelity the city itself was liable. All these, at different times and under different circumstances, had a common end. The assignats, though based upon the avails of large estates which had been confiscated, and made a legal tender by severe penalties, gradually sunk in the market, in consequence of excessive issues, until they became worthless. A similar fate attended the paper rubles of Russia; and the governors of the Bank of Amsterdam, in violation of their official duty and solemn oaths, secretly withdrew the specie that had been deposited in its vaults; and this fraud was not discovered for forty or fifty years. But the attempts in our own country, by different states, to establish banks owned by the states, have been equally unfortunate. Few, if any, have maintained their credit, and the committee believe that there is some inherent and insurmountable difficulty in *government banking*, that cannot be overcome or obviated.

"In the first place, the various officers and agents which would be selected to take charge of such an institution, are not likely to have the requisite financial skill, even if they should have the requisite moral honesty. *They will be selected from party and political considerations. Thus it ever has been, and thus it ever will be.* But, even if they had the skill, they would not feel that solicitude which self-interest alone can create, and which is indispensable to the successful management of a bank. But, among such agents appointed from such motives, there will be many whose moral integrity cannot be safely trusted. *We have deplorable evidence of this in the numerous defaulters to the government, and the scarcely less numerous instances of bank officers acting under the immediate eye of those interested, who have embezzled the funds which they were paid to guard.*

"But even if these difficulties could be overcome, there is still another which admits of no remedy, and against which you can provide no security; *and that is the dangerous increase in the issues of such paper by legislative authority. It matters not that you limit it by this act—the next Congress has power to change it; and, having the power, if there should be a deficiency in the revenue, it will be exercised.* All experience leads to this inevitable result. It was so in France. It was so in Russia. It was so in this country during the Revolution, when continental money was poured out until it became worthless; and it was so during the last war, when treasury notes were increased until they were twenty or twenty-five per cent below the par value of non-specie paying banks; and, even within a few months after this exchequer plan was first recommended to Congress, in a time of profound peace, treasury notes were issued until they fell five per cent below par, and the credit of the treasury was, at last, only saved by promising to pay six per cent interest on these notes semi-annually, which converted them at once from currency, receivable in public dues, into a species of stock for investment. Even we could not sell a six per cent stock, having twenty years to run, without a discount to meet these notes; and had they been issued under this exchequer, the result must have been the same. All these facts lead to but one conclusion, and that seems irresistible; which is, that the government ought not to engage in banking, but that that should be left to private corporations or companies, which may be effectually restrained in their issues by penal laws, for the violation of which they may be made amenable to the courts. Certainly nothing short of this can prevent excessive issues, or insure prompt redemption; and even this has not always effected that object."

Thus much Mr. Fillmore has alleged against the scheme of President Tyler, upon its economical defects. Of its corrupting tendency he makes the following just and forcible observations:—

"If it were possible to have such an institution without increasing executive power or endangering the treasury, which should be administered by men of undoubted talents and integrity, endued with competent financial skill, and a cautious, vigilant sagacity,

uncontaminated with political and partisan bias, it is undoubtedly capable of rendering some service both to the business wants of the country and the financial embarrassments of the treasury. But to hope for this is to expect a change in human nature itself, and in the ordinary motives that govern the conduct of men, and especially political men, little less than miraculous. *Our institutions are based upon no such theory of human perfectibility.* They contemplate the possibility of error and vice in those who are intrusted with power, and therefore guard the trust by every limitation, as to time and amount, not incompatible with the object to be obtained.

"Suppose the exchequer agent dishonest; suppose him a warm political partisan; might not these favours be dealt out to political friends, and denied to political enemies? Or suppose money is wanted to corrupt the fountains of elective power, or carry some great political contest; how easy would it be for a dishonest and pliant exchequer agent to buy the drafts of some irresponsible political friend, and thereby pour out the national treasury for the basest purposes; and yet, when called to an account, he has committed no crime—he has merely misjudged by purchasing a draft not accepted, the drawer of which has proved irresponsible."

"Mr. Tyler previously," says Mr. Lee, "vetoed a plan of a national bank founded on principles much more practicable, and fraught with infinite less danger to the cause of sound currency and sound morals than this plan of raising money by other means than taxation."

"But it is said that, sustained by government credit, there would be no danger that this government paper would become depreciated. Now, is it true that there is such a high degree of confidence in public credit? Have we not seen treasury notes selling below par, when money was superabundant? Is it already forgotten that within a year the government six per cents have been offered on every exchange in Europe at par, and refused at that high rate of interest, when the three and a half per cent stocks of Hamburg were eagerly sought after at par? While the three per cents of Great Britain, owing 3,800,000,000 dollars, would command more money than our six per cents? This is not all: were not those six per cents, which had been rejected by every banker and stock dealer in Europe, sold in this country on lower terms than money could be borrowed on the notes of hand of hundreds of individuals? Perhaps we might say some thousands of individuals, in the great commercial cities, where for twelve or eighteen months there has been a superabundance of disposable capital in exchange for which its possessors were in pursuit of safe investments?"

"It is true that the government *six per cents* which were disposed of at something under their par value, have since advanced to twelve per cent beyond par; but this has arisen, not from a firm reliance on government credit, but from an extraordinary abundance of money accompanied by speculative operations, which have carried up state stocks from fifteen to fifty per cent above the prices they bore twelve months ago, while at the same time the notes of individuals, bearing interest of from three to four per cent per annum, are selling at par. In other words, there are now, as twelve months ago, thousands of men in private life, who can borrow money on considerably lower terms than the government."

"If the financial and fiscal concerns of the nation had been managed with any tolerable degree of skill and prudence, and there was a reasonable degree of confidence in the capacity and good faith of the existing administration, a government loan, bearing an interest of four per cent, would have commanded as much, if not more money, than was realised for the last loans, though disposed of when money was so abundant that mercantile securities were in demand at lower rates of interest than have been current among us for many years; while in the great money marts of Europe, borrowings could be effected on business paper, of a fair character, at from two to three per cent per annum, and at some periods on still lower terms."

"These facts, which few persons can be ignorant of, although they may be unmindful of them, show what a *low degree of credit the public securities enjoy* at home and abroad. Some of the causes of this discredit have been referred to in various passages of these letters. Superadded to these causes, may be reckoned the proposition advanced by the executive, of raising, by means of what he is pleased to term '*the exchequer*,' whatever

money the public wants may require, beyond the existing amount of revenue, greatly insufficient as it is, and as it has been for some past years, *by an issue of national paper money.*"

We have not adduced these remarks for the purpose of proposing a system of banking, but to exhibit the evils of fallacious currencies, and to show what has been done, and what exists—what has been, and what is proposed as remedies for these evils, regarding the currency of the United States. The following are extracts from a recent report of the Select Committee on banking and currency in the United States, of which Mr. Cushing was chairman.

"The constitution of the United States empowers Congress 'to lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defence and general welfare of the United States,' it being requisite that 'all such duties, imposts, and excises shall be uniform throughout the United States.' And it recognises the existence of 'the treasury of the United States.' But it does not prescribe the organisation of that treasury, nor set forth the mode in which its *personnel* shall be constituted or its business transacted, otherwise than as it provides that the president, with the advice and consent of the senate, shall appoint the principal officers of the United States. But the constitution further provides that Congress shall have power to make all laws 'necessary and proper for carrying into execution' all other powers vested by it in the federal government. And under these constitutional provisions is the treasury of the United States to be organised by legislation, and its concerns conducted; the president being empowered and enjoined 'to take care that the laws be faithfully executed.'

"*Treasury Department.*—By the act to establish the treasury department, passed on the 2nd of September, 1789, it was provided that it shall be the duty of the treasurer to receive and keep the moneys of the United States, and to disburse the same, upon warrants drawn by the secretary of the treasury; but the plan and mode of so keeping the moneys of the United States were not specifically prescribed, unlimited scope of choice being left to the treasurer in this respect, subject always to the authority of the president to see to the due execution of the laws, and in his executive capacity to guard the interests of the government.

"*Bank of the United States.*—Under these provisions of law, the fiscal operations of the federal government, as now constituted, commenced, and so proceeded, until the 25th of February, 1791, when the Bank of the United States, according to the proposal of the secretary of the treasury, was incorporated for a period of twenty years.

"This bank answered immediately three purposes of the government, namely,—I. Of its capital of 10,000,000 dollars, three-fourths were composed of funded debt; II. It was made the fiscal agent of the United States; III. Its notes became a legalised currency, being declared receivable in all payments at the treasury.

"And the system of the government was completed by the act of the 2nd of April, 1792, establishing a mint, and regulating the coins of the United States upon the basis of the dollar unit, previously prescribed by the continental Congress.

"On the expiration of its charter, it does not appear to have been deemed necessary or expedient to legislate further, either as to the means of collecting or the mode of keeping the public moneys; but this was left to stand on the authority vested in the treasurer, by the act of 1789, to receive and keep the moneys of the United States.

"Meanwhile, the number of banks, incorporated by the several states, had increased, previous to or at this time, to one hundred, and in 1812 about twenty more were incorporated, with an aggregate capital, in the whole, of upwards of seventy-seven millions of dollars; and the business of the treasury was conducted in their notes, and by deposits with them. In the progress of the war with Great Britain, all the state banks, south of New England, ceased to pay coin for their bills (in 1814), as the United States Bank would, in all probability, have done, if it had continued to exist, as the suspension was chiefly in consequence of advances made by them to the government; but, notwithstanding the non-redeemability of their bills, they continued, from the necessity of the

case, to be received and paid in the business of the treasury, *though gold and silver coin was at this time, by express enactment, the only legal currency of the United States.*

" Under this condition of things, the act of the 10th of April, 1816, was passed, establishing the second Bank of the United States.

" The prime inducement to the establishment of this corporation, as stated by the president (Mr. Madison), in the message recommending it, was to restore to the community ' a uniform national currency ; ' to provide a ' substitute ' for coin, ' which might engage the confidence and accommodate the wants of the citizens throughout the union, ' until the time when the precious metals could again be rendered ' the general medium of exchange. '

" The president, in his message, indicated three means of providing a ' common (paper) medium of circulation, ' viz :—1. By the bills of the state banks ; 2. By a national bank ; and, 3. By ' the notes of the government. '

" The newly chartered bank, then, like its predecessor, furnished a paper currency declared by law to be receivable in all payments at the treasury ; it was made the fiscal agent and the depository of the treasury ; and it absorbed in its capital a portion of the public debt ; since, of the 35,000,000 dollars constituting its stock, only 7,000,000 dollars were required to be in specie, the remaining 21,000,000 dollars of ' private subscription being authorised to be received in stock, as also the 7,000,000 dollars to be subscribed by the government.

" In further regulation of the currency, at the same session of Congress, by an act in the form of a resolution, passed on the 30th of April, 1816, it was provided that all duties, taxes, debts, or sums of money, accruing or becoming payable to the United States, shall be collected and paid in nothing but the legal currency of the United States, or treasury notes, or notes of the United States Bank, or the notes of banks payable and paid on demand in the legal currency of the United States.

" And by the combined action of the government, the United States Bank, and other causes, the bank currency of the country was brought back to a specie standard.

" On the expiration of the legal term of the charter of this bank, in 1836 (a bill for its rechartering having been vetoed by President Jackson, and the public deposits withdrawn from it), the business of the treasury was again transferred to the banks of the several states, and transacted by them, at first, under the general authority of the act establishing the treasury department, and afterwards according to the more specific provisions of the act of Congress, passed the 23rd of June, 1836, to regulate the deposits of the public money.

" Under the new system, the public revenue on hand was deposited in selected banks, with various regulations of security ; the public funds were transferred by their agency : their notes were received and paid out in the dealings of the treasury ; and they were relied on to conduct the exchanges of the country, and furnish its paper currency.

" At this period (1836), the number of banks chartered by the several states had greatly increased, many being created for the alleged purpose of supplying the anticipated vacuum in business by reason of the refusal of a new charter to the United States Bank ; *the total number of banks in operation in the United States being six hundred and seventy-six, with a capital of upwards of three hundred and twenty-four millions of dollars.* This amount of capital was greatly beyond the real wants of the country : *much of it was fictitious ; the business was altogether overdone ; excessive bank issues and overtrading followed hand in hand ; and at length (in 1837), the whole machinery fell into pieces, and a general suspension of cash payments by all the banks in the United States occurred.*

" The president (Mr. Van Buren), considering the incorporation of a national bank unconstitutional, and if constitutional, yet unwise, and deeming the continued use of the state banks either impracticable or inexpedient, recommended a radical change in the fiscal operations of the federal government, which (with some modification of the original plan), became the law of the land on the 4th of July, 1840, by the passage of the act to provide for the collection, safe-keeping, transfer, and disbursement of the public money.

" The principle of this plan was the ultimate total separation of the federal govern-

ment from all dependance on banks and bank paper in the business of the treasury. The treasurer of the United States and various officers of the government under him, were required to keep the public moneys in the vaults of the government, and perform all the duties of transfer as well as deposit, and provision was made for exacting immediately one-fourth of all public dues to be paid in gold and silver, and for the addition of one-fourth to that requisition yearly; so that, on and after the expiration of three years all payments to the government should be made in gold and silver only, as the sole and exclusive legal currency of the United States.

"The act continued in force only one year, being repealed by the act of 1841, which threw back the business of the treasury on the provisions of the resolution of 1816, and the original act establishing the treasury department, where it now stands.

"And thus, by the vicissitudes of opinion and of party, and the successive rejection of the plan of a Bank of the United States, that of deposit in state banks, and of the independent treasury, Congress is invited and required to examine the whole subject anew, free from all impediments of existing law, and to settle it on the principles of justice and general expediency, and in the letter and spirit of the constitution."

The committee then report on the *public revenue*, the *money standard*, or *measure of value*, on *bank paper*, and on *government bills of credit*.

On the subject of public revenue, the committee judiciously observes—

"*Of the Public Revenue.*—Every wise government, whatever may be the source or tenure of its power, will, of course, in the solution of this problem, aim to reconcile its own interests with those of the community it governs. If it be a constitutional government, established and existing only by the consent of the governed, its functions are nothing but a high trust, to be exercised for their advantage. If it be a despotic government, holding its power by force or prescription, still its own greatness is inseparably connected with the welfare and prosperity of those whom it rules, and the extent of its own pecuniary resources depends upon theirs."

*On the Money Standard, or Measure of Value*, the committee report—"Whatever course of policy government may choose to adopt in these respects, it must, of necessity, as the indispensable condition precedent of any regular system of fiscal measures, fix a money standard, or measure of value, for the regulation of all dealings between itself and the community, unless it receive every thing in kind, and pay out the same. Even then, it must have some sort of measure of value, otherwise all taxation will be arbitrary, unequal, and oppressive. It is convenient that the standard of value between itself and the community shall, if possible, be the same as that between the individuals of the community themselves in their own mutual dealings. It is, moreover, in other relations, a proper function of government, for the sake of uniformity, for the prevention of disputes, and for the execution of the laws between man and man, to prescribe the measure by which the value of property, the exchange of commodities, and the collection of debts shall be regulated. Unless there be such a fixed standard of value, the property and the labour of all are at the mercy of the government and of individuals. Hence the universal exercise, by all civilised governments, of the power to coin money, and assign to it a standard denomination of value.

"If it were possible to discover or devise any substance or thing, of the same *unchangeable quantity and value at all times and places, imperishable, safe, portable, perfectly convenient, indefinitely divisible, and upon which neither time nor man could act to its injury or abuse, that would be the true money standard.*"

\* In the Reverend Mr. Felt's recent "History of the Early Currency of Massachusetts," we are informed that "The want of a fixed and permanent standard for the adjustment of debts, and also some portable representative of smaller values, drove our good fathers into a great variety of speculative schemes as well as odd and awkward expedients. Having no prominent staple like that of Virginia, where the price of all commodities (not excepting *wines*), was estimated in tobacco, they made use of almost every marketable article as currency. Wheat, rye, Indian corn, peas, fish, and beaver, were, however, more especially used as money; while musket-balls, at a farthing a-piece, and white and blue shells of three and four for a penny, answered, many years, as small change."

" *The use of the precious metals*, in this way, resulted from that use; and governments only added the legal rate of

It is quite a remarkable fact, that our ancestors should find among them a medium which could be adapted to their own purposes, and be used in transactions. The manufacture and use of wampum-peage, or shell money, by the Pequots and Narragansetts, and given them an ascendancy over the natives, was always convertible into peltry with the natives at definite rates of specie in fixedness of value, our fathers gladly availed themselves of this substitute. Wampum and beaver, with articles before enumerated, formed the currency of the first thirty years. In these were a great proportion of the largest part being in grain, so that the public treasury resembled the Egyptian, being filled with corn instead of money. The salaries of the magistrates, having just a little silver added to buy such clothing and provisions imported from the old country. The deputy to the general court was the town magistrate and the surveyor of lands were satisfied with contributions to college, when made in *wampum-peage*, were purchased amounts not exceeding twenty-five pounds at one time. In 1644, a peck of corn, or twelve-pence in money for the maintenance

" The stated prices of the products of the earth varied less in value than expected. They were as follows :—

" Cattle also were taken in payment, both of the public and private debts.

" The office of collector was, at that time, no sinecure, he being obliged to find a medium for the various towns to the place where the money had often to go back in the way of expenditure to the very place from which it was taken, it finally occurred to some sagacious persons, that, in many cases, it was more convenient in the treasury as the actual presence of grain or of cattle, were, therefore, multiplied about the country. The constables of the portions collected in their districts; and warrants were drawn for the same.

" In 1652, the colony made a great stride in finance by the establishment of a mint. The act of sovereignty was defended by the plea of necessity, and, in a few years, under the constant frowns and even prohibitions of the British government, and difficulties that attended the old system led to a more convenient medium, and great pains were taken to enlarge the mint. Laws were enacted against its transportation, involving no less than a fine of £100, and searchers were appointed in every port of entry.

" The Dutch coins, ducatoons, guilders, and half guilders, six-pence and three-pence numbers obtained from the Hollanders, at New York. But the most favourable to an increase of specie, was the opportunity that occurred from the buccaneers who were disposed to bring their gold and silver to the colony.

" The mint being established, the famous pine-tree coins were issued, which were less valuable than the English coins, to keep them in the mint, and hence in exchange between our coin and that of England, amounted to a great deal. The old currency, however, was by no means superseded, and country people found their way to the public treasury. It was found expedient, notwithstanding the assumption of a coining power, by occasional presents, to keep the mint always pressed for a sufficient circulating medium to supply the demand. When a corporation for issuing bills in the nature of a banking institution was proposed, in the year 1700, for want of records, the public papers of the colony were lost, and the public mind was in great confusion.

ulate of purity and denomination, for convenience in counting, and in passing from hand to hand.

"Moreover, the *precious metals*, though of less bulk in proportion to their value than most other commodities, yet cannot be transported from place to place without cost and risk. And to release individuals and governments from the inconveniences attending the continual personal custody and handling, and the unnecessary transportation of specie from one place to another, *bills of exchange*, banks, and other establishments for dealing in *bills and money* and receiving money in deposit, and for the adjustment of commercial and other accounts by bank credits, checks, and bills, came into use, and became fixed ingredients in all the monetary operations of the modern civilised world.

"But the precious metals themselves, in addition to their uses for coin, are likewise, whether coined or uncoined, a commodity, or article for production, consumption, and merchandise. Themselves are a part of that general property of the community, of all the rest of which they are the measure; and they are of actual value, different in different places, according to the contingencies of government or commerce. Their aggregate quantity is subject to be diminished by casual destruction or absorption in the arts of manufacture, or to be diminished or augmented by the greater or less number or productiveness of mines, and thus their aggregate value relatively to other commodities is liable to perpetual change. The influence of these facts upon prices, upon public affairs, and upon commerce, is visible in all the financial history of modern times.

"Besides which, *coin is subject to debasement*, or to be made a legal tender at a rate exceeding its actual value, by the arbitrary act of the government which controls its coinage and prescribes its legal value. In times when the uses of a paper currency, and of public stocks, were not understood or not practised, and communities had not begun to resort to a paper symbol or nominal representative of money capable of being fabricated at will, the adulteration of coin instead of it was, it is well known, the frequent expedient of public necessity or public cupidity to obtain relief from some pressing pecuniary embarrassment.

"*Bills of exchange*, it is obvious, though performing the functions of a medium of exchange like money, are not money. They are, for the most part, and in their proper use, only the representatives of the money or of the value of the merchandise on which they are drawn; and in this respect they are of such universally admitted utility as to render certain their continued employment in the business of society.

"*Bank credits, checks, or bills*, though they also perform some of the functions of money, and constitute a circulating currency, are not money. They are nothing but promises or orders for the payment of money according to their tenor. And whilst paper, actually, and truly redeemable in coin on demand, is not money, still less is that paper in any sense money which, whether professedly or not, is yet in point of fact not redeemable in coin on demand."

On bank paper, the committee report:—

"*Bank paper*, if it stand on a solid specie basis, has circulation by reason of its convenience, and its being therefore preferred to the coin itself. This preference may continue to exist so as to have the effect of keeping suspended in circulation at all times a certain quantity of the paper, and to free the bank from the necessity of retaining always on hand an amount of specie equal to the amount of paper issued. And thus a cheap medium of circulation is supplied in place of a dear one. And if the redemption of its bills be continually enforced, and the prudence of its conduct incessantly tested and secured, the operation is a useful one to the community as well as a profitable one to the bank.

"But in this way the bank acquires the faculty, not indeed of creating value, but of creating at will that which commands value. It is tempted by the cupidity of gain to ex-

London without the preservation of copies here. This bank did not survive the revolution of 1688.

"In 1687, a public demand on Hingham was paid in *milk pails*. The mint had been suspended under the administration of Andros, and was not renewed after the accession of William and Mary. This was partly owing to the debasement of the coin, which the officers of the London mint had reported to be twenty-two and a half per cent lighter than the English."

*pand its issues. The redeemability in coin set forth on the face of its paper comes to be a fiction or a falsehood. If the government of the country see fit to permit this operation to go on, or the people inadvertently acquiesce in it, the gradual expansion of the currency stimulates to an artificial excitement in business; property rises in nominal value; it is quickly exchanged for that which has no intrinsic value; and every thing wears the aspect of high prosperity, until the bubble of inflated paper circulation bursts, throwing all the currency into confusion, suddenly reducing prices, arresting business, and filling the community with bankruptcy and distress."*

These latter remarks illustrate forcibly the cause of the failure of American banks. On government bills of credit, the committee report :—

*"Government Bills of Credit.*—To issue paper having currency as money, is in fact to borrow money, and command commercial values at will. Why, then, should individuals or corporations have the exclusive enjoyment of this wealth-creating power? Why should not government itself participate in it, or take it to itself? It has done so. By the issue of bills of credit or assignats, it has, under the pressure of war and foreign invasion, absorbed all the labour and property of the community for public uses.

*"There is no difference in principle between bills not redeemable in specie, issued by the government for circulation as currency, and similar bills issued in the same way by corporations or by individuals, except that government may have the power to make them a forced legal tender. Nor is it material, if they be not actually redeemable in specie whether they be issued on faith and credit only, like the common promissory notes of individuals, or whether they be nominally secured by the pledge of lands or effects set apart for their redemption. In either case, such bills constitute an act of borrowing, not an emission of money. In both cases the course of things is the same, whether they be issued on public or private responsibility. They continue to have currency as money, so long as, from ignorance, inadvertence, or necessity, men voluntarily receive them. But, under the most favourable circumstances possible, and when such bills are issued upon the highest conceivable credit, and though governments inculcate, and communities believe, that the bills are equal in value to coin, still they speedily begin to undergo a gradual depreciation, indicated in the rise of the comparative price of the precious metals. And, in general, of all such issues the fate is the same, a depreciation in value to a greater or less extent, sometimes absolutely to nothing, having the effect to impose and levy a tax on the community, to abstract from it property or labour without compensation, nearly to the total amount of such depreciation.*

*"Government, in wielding the physical force of the nation, has the right to take the property or the labour of individuals for the salvation of all, and the question of the form of taxation in which this shall be done, whether by the forced course of a paper currency, or otherwise, may be reduced to a mere problem of expediency or practicability. But, in every such operation, the premises are a case of overwhelming public necessity.*

*"But there can be no such considerations to justify governments in allowing private individuals or corporations to issue irredeemable bills to circulate as money, and thus to extort a tax from the community, for the purposes of mere private gain. It is conceded that individuals ought not to adulterate the coin, or falsify its denomination; for which reason the coin is placed under the safeguard of the public authority. The reason is greater for subjecting the issues of paper currency to public authority, because the extent of the possible evil is greater, and the nature of the effect on private rights and interests is in both cases substantially the same.*

*"In addition to which, of all these diverse forms of paper currency not redeemable in specie on demand, the inherent and (so far as yet shown) the incurable vice is a tendency to excess of issues, a fatal facility in the creation of what is called and received as money, which seems to afford all but irresistible temptation to the cupidity of individuals and of governments. This is apparent in regard to all paper currency, of whatever description, and wheresoever it originates, which does not undertake to be redeemable in coin.*

*"For, be it still remembered, that, in the opinion of the best and most experienced writers, the issue of a paper currency is not the creation of money; and it is not*

perfect when no more than equal in amount in a given country to what the currency of that country would be if it consisted only of gold and silver.

" Governments have generally seen that the faculty of issuing a paper to circulate as money should not be conceded to persons engaged in the business of trade; for if it were, issuing bills at discretion, they might engross directly an indefinite amount of the property of the community. Accordingly, the privilege has usually been granted only to persons or companies engaged in the business of lending money. But the persons constituting the company, or controlling its affairs, may themselves be borrowers; and then the restriction becomes a nugatory one: for in that case they create a currency to use it in trade themselves; which is not the least frequent cause of excessive bank issues, and has led to the opinion, entertained now by many, that inasmuch as the business of trading and of issuing a paper currency should be separated, for the same reason that of lending money, and of issuing a paper currency ought not to be intrusted to the same hands.

" In case, however, the government itself be a borrower, and does not choose to issue a paper of its own to circulate as money, it may, and often does, attain the same end by the establishment of a bank of issues, for the very purpose of arranging its debts or anticipating its revenues. Hence the origin, in many cases, of the direct association between governments and banks.

" So that in all communities, and in every form in which currency exists, whether as coined money or as a paper representative of it, and whether this be issued by banks or by public authority directly, the question of the currency of the country and that of its fiscal affairs are inseparable facts.

" *Our political institutions are the work of compact and consent. To the federal government belongs all such legislative and administrative power, and such only, as the constitution defines; all functions of government not thereby granted to the union, remaining to the separate states or to the people thereof, and the states themselves possessing many of the substantive powers of political sovereignty.*

" *Among the substantive powers of political sovereignty exercised (whether rightfully or not) by each of the states, is that of authorising and regulating, by means of chartered instruments of their own, the issue of bank paper to circulate as currency.*

" The faculty of issuing paper to circulate as currency, is no more a necessary incident of the faculty to receive money in deposit, and to loan it in the discount of notes and purchase of bills, than it is a necessary incident of the faculty to buy and sell merchandise. A bank having authority to issue bills, after purchasing bills with (that is, loaning out) the whole of its capital, proceeds to purchase other bills with its own promises to pay. Thus it does more business than if rigidly confined to its capital it could, and makes an interest on its own credit or promises, as well as on its capital. The real operation would be the same if a merchant had the same authority. Yet, by the practice in the United States (not so generally in other countries), the two faculties of loaning money and of issuing a currency are conjoined in the banks of the states.

" *It may well be doubted whether the bills so issued by the banks of the states, and constituting a currency, are not bills of credit within the meaning of the prohibition of the constitution.*

" *State Bills of Credit.*—Historically, it is demonstrable that the expression 'bills of credit' applied, in all the period anterior to the adoption of the constitution, to these bills of banks. There were two forms of bills of credit, recognised in legislation, speech, and written, namely, 'government bills of credit,' and 'bank bills of credit.'

" It seems difficult to conceive how these two species of the same generic thing came to be considered so far different as that one should be constitutional and the other not. To be a legal tender is not of the essence of either; that is, each had been issued extensively without being declared a legal tender; and in all other respects they are in effect and mischief the same; tending in the same way to excess, alike usurping the place of money, producing the same disorders in the currency, and having the same deleterious influence over the relations of labour and property.

" And it would seem to be a strange anomaly of the fundamental law, or, if not anomaly, then oversight, to provide that a state shall not issue bills of credit by the

instrumentality of a legal person called its 'treasurer,' but a person called its 'bank;' in other words, that it cannot, as a derivative source of the issue of bills of credit.

"Nor does it vary the principle, to enact that the bank be a whole, of incorporated private stock. This appears by the fact that most of the banks in the United States, south of New York, have failed to make any bills in cash, a large part of them having failed to make any space of more than four years. *Their bills are an irredeemable debt, and their continued irredeemability has been legalised by state legislation as the means of procuring to the use of the state governments with which to defray the charges of the state, instead of levying for that purpose. The state cannot issue bills of credit by itself, but does by its banks; which is one great cause of the existing distress in the United States.*

"Thus, of the sovereign function to make issue, and regulate the circulation of money, the state governments (whether by usurpation or constitutional result), possess a part in common with the federal government.

"And this is the radical difficulty in the whole matter of currency. If the states have the power so to issue bank bills of credit, then the federal government (by any direct legislation) prevent their issue, and of course the federal government (by any direct legislation) apply a cure to the inherent chronic disease of the United States. Whether it may administer any indirect remedy is another question.

On the power and duty of the federal government to regulate the currency.

"It is of the power and duty of the federal government, for itself a safe and suitable fiscal agent to receive, keep, and disburse the public money. This it does under the tax power and other powers of the constitution.

"The federal government has, in the second place, under the constitution, certain powers to exert and duties to discharge in relation to the currency of the United States.

"If the duty of the federal government consisted only of the power to issue bills of credit, it would be a more easily answered question. But, in the opinion of the committee, it should consider, not only what is for the convenience of the government, but what is for the convenience and welfare of the people of the United States.

"It cannot assume and pay that great mass of individual debts of the United States, which now weighs them down, and in its present condition; debts contracted when the currency was of a factitiously large or wholly unreal value, and the possession of which, owing to their present depreciated value, affords to him no advantage. What alone Congress can directly do in this respect it has done by the bankrupt law, which, whether rightful or not in its provisions, yet it has done to settle these debts with such means of payment as he possesses. So far as this indebtedness is a general evil affecting the whole country, it must minister to himself. The remedy, and the only remedy, is a return to proper principles of trade, and a return to proper principles of trade, with the immense and various productive resources of the country, and the energy of its people, with no extraneous cause of war or other disturbance, the speedy return to our accustomed prosperity is as certain as the sun.

"It cannot, by any direct legislation, prevent unwise extravagance, overtrading, speculation, the excessive importation of luxuries, and the consequent excess of imports over exports to pay foreign balances. What alone it can do in this respect is to set an example of integrity and frugality in its own affairs, in its taxation and finance, so as at any rate not to injure the

country, and, if it may, incidentally to foster it impartially in all its forms, and do equal justice to the rights and interests alike of all parts of the union.

"It *cannot* assume and pay the debts which the individual states have contracted on their own account. All that in this relation it can assume to do it has (whether rightfully or not) done, by ceding to the states the annual nett proceeds of the public lands. For the rest, the people of the United States, who are also the people of the states, have the remedy for this evil in their own hands, by the better regulation of their own finances, and the imposition of taxes to pay the interest of their public debts.

"It *cannot* command and compel the state legislatures to cease to authorise the suspension of cash payments by their banks, nor prevent those banks from issuing bills of credit to accommodate the present wants, and postpone the final pay day of individual debtors or of the states. It cannot, by its own direct act, retire from circulation their depreciated bills, the currency of which is the greatest evil of the times. *But it can act on the subject-matter by the refusal to receive or use anything but coin or equivalent paper in its own dealings, and if it receive bank bills, by exacting payment of them at frequent specified periods.* And in the opinion of many, who are conversant with the subject, and whose experience and judgment are entitled to consideration, it can, to some degree, remedy the disorders of the currency, by applying to *legal or artificial persons* the same laws for the immediate distribution of their assets and discharge of their debts, which apply to natural persons.

"It *cannot give* to the country a paper currency in the bills of an incorporated joint-stock bank of private stockholders; *for the constitutional opinions of the president, and of a considerable part of the members of the two houses, and of the people at large, constitute at present an insuperable impediment to the incorporation of a national bank; and if it could be incorporated, it would be impossible, and if possible, would aggravate rather than lighten existing evils, to collect the stock of such an institution. It can, however, provide a national paper currency of adequate quantity, and of better quality, by other means.*

"It cannot equalise the exchanges throughout the country, so long as the currency of most parts of it consists of irredeemable bank bills in various degrees and stages of depreciation, and the business of buying and selling is transacted in one part of the country by means of specie values; and in another by paper values. Most of the existing rate of exchange between different parts of the country, is not the difference in price between legal coin in one place and legal coin in another, or of the cost of transporting it to settle balances, but the difference between the price of the coin currency and of the paper currency at the same place. This Congress cannot prevent. But it may provide a safe and economical medium of exchanges, correspondent to the true value of exchange as regulated by the course of business, according to supply and demand, in a specie medium of payment.

"It *cannot, by any act of its own whatever, proceed immediately to fill the channels of commerce with a paper currency equal in rate of value to gold and silver, neither by means of a national bank nor by any other instrumentality whatever.* For the same reason that, in the market of a depreciated paper currency, coin cannot be kept in circulation, but becomes at once an article of merchandise, and is bought up as such, and disappears, just so will it always be with a specie value paper currency alongside of a depreciated paper currency. *Until state governments cease to authorise or sanction the issue of irredeemable bank paper in a given community, that community cannot have any better currency.* But the federal government can adopt the means to furnish a paper currency of par value, to be ready to take the place of the depreciated paper currency, so soon as that shall be driven or withdrawn from circulation by the direct action of the state governments, or by the indirect action of the federal government."

The foregoing extracts from the report are remarkably illustrative of the currency of the United States; the committee then report in detail the various proposals made as to the course which Congress should adopt. On this subject,

essays, reports, letters, and schemes, have been printed library.

From a speech delivered by Mr. Webster, in 1816, in C ment of the late United States Bank,—a measure to which l of the federal members of Congress, and a majority of the and middle states, was opposed,—we find the following rema

“It was a mistaken idea that we were about to reform th tion had a better currency than the United States;—there guarded its currency with more care; for the framers of the enacted the early statutes on this subject, were hard mon therefore duly appreciated, the evils of a paper medium guarded the currency of the United States from debasemen United States was gold and silver; this was a subject in r run into no folly.”

“The establishment of a national bank not being, in his he proceeded to examine what was, &c.

“The banks not emanating from Congress, what engin modifying the existing evil? Their only legitimate power, paper of such banks as do not pay specie, from being rec With a receipt of forty millions a year, if the government w interests of the people, they could control the evil, and it effort. They should have made it long ago, and they ought

In a subsequent speech he says,

“As to any power of compulsion to be exercised over t subject to the direct control of the general government I which created them to decide whether they have acted acco not, what shall be the remedy for their irregularities. But tinued to receive deposits of public money government had would conduct their concerns according to the safe and should properly govern such institutions. It is bound also people on a uniform system. These rights and these duties rendered to the accommodation of any particular purpose.

“The only power which the general government possess the states banks, is to refuse their notes in the receipts of t can exercise now, or at least it can provide now for exercisi cause the currency of some part of the country is yet sound,

“In a country so commercial as ours,” says Mr. Van B “banks in some form will probably always exist; but this s incumbent on us, notwithstanding the discouragement of the tive stations, to mitigate the evils they produce, &c.

“Institutions so framed have existed, and still exist else intercourse all necessary facilities, without inflating or d stimulating speculation. Thus accomplishing their legitimat surest guarantee for their protection and encouragement in nity. Among a people so just as ours the same results cou course. The direct supervision of the banks, belongs, for ment, to the states who authorise them. It is to their must mainly look for action on that subject. But as the co ment, in the management of its revenue, has also a power influence upon them, it becomes our duty to see that a prc While the keeping of the public revenue in a separate and collecting it in gold and silver, will have a salutary influe credit with which all banks are connected, and thus aid th managed, it will at the same time seriously check such withholding the means of extravagance afforded by the p

them from excessive issues of notes which they would be continually called upon to redeem.

"Yet the commerce and currency of the country are suffering evils from the operations of the state banks, which cannot and ought not to be overlooked. By their means we have been flooded with a depreciated paper, which it was evidently the design of the framers of the constitution to prevent, when they required Congress to 'coin money and regulate the value of foreign coins,' and when they forbade the states 'to coin money, emit bills of credit, make any thing but gold and silver a tender in payment of debts,' or 'pass any law impairing the obligation of contracts.' If they did not guard more explicitly against the present state of things, it was because they could not have anticipated that the few banks then existing were to swell to an extent which would expel to so great a degree the gold and silver, for which they had provided, from the channels of circulation, and fill them with a currency that defeats the object they had in view. The remedy for this must chiefly rest with the states from whose legislation it has sprung. No good that might accrue in a particular case from the exercise of powers not obviously conferred on the general government, would authorise its interference, or justify a course that might, in the slightest degree, increase, at the expense of the states, the power of the federal authorities—nor do I doubt that the states will apply the remedy. Within the last few years, events have appealed to them too strongly to be disregarded. *They have seen that the constitution, though theoretically adhered to, is subverted in practice; that while on the statute books there is no legal tender but gold and silver, no law impairing the obligations of contracts, yet that, in point of fact, the privileges conferred on banking corporations have made their notes the currency of the country; that the obligations imposed by these notes are violated under the impulses of interest or convenience;* and that the number and power of the persons connected with these corporations, or placed under their influence, give them a fearful weight when their interest is in opposition to the spirit of the constitution and laws. To the people it is immaterial whether these results are produced by open violations of the latter, or by the workings of a system of which the result is the same. An inflexible execution even of the existing statutes of most of the states, would redress many evils now endured—would effectually show the banks the dangers of mismanagement, which impunity encourages them to repeat—and would teach all corporations the useful lesson that they are the subjects of the law and the servants of the people. What is still wanting to effect these objects must be sought in additional legislation; or, if that be inadequate, in such further constitutional grants or restrictions as may bring us back into the path from which we have so widely wandered.

"*But let it be indelibly engraved on our minds that relief is not to be found in expedients. Indebtedness cannot be lessened by borrowing more money, or by changing the form of the debt.* The balance of trade is not to be turned in our favour by creating new demands upon us from abroad. Our currency cannot be improved by the creation of new banks, or more issues from those which now exist. Although these devices sometimes appear to give temporary relief, they almost invariably aggravate the evil in the end. It is only by retrenchment and reform, by curtailing public and private expenditures, by paying our debts, and by reforming our banking system, that we are to expect effectual relief, security for the future, and an enduring prosperity. In shaping the institutions and policy of the government so as to promote, as far as it can with its limited powers, these important ends, you may rely on my most cordial co-operation."—*Message*, 1839.

"The consideration that a large public debt affords an apology, and produces, in some degree, a necessity also, for resorting to a system and extent of taxation which is not only oppressive throughout, but likewise so apt to lead, in the end, to the commission of that most odious of all offences against the principles of republican government—the prostitution of political power, conferred for the general benefit, to the aggrandisement of particular classes, and the gratification of individual cupidity—is alone sufficient, independently of the weighty objections which have already been urged, to render its creation and existence the sources of bitter and unappeasable discord."—*Message*, 1840.

"It was not designed by the constitution that the government should manage domestic or foreign exchanges. It is indeed the law the commerce between the states, to provide a general system of exchange, in gold and silver; but it is not its province to transfer of their funds, otherwise than through the facilities of the banking department. As justly might it be called on to provide for the exchange of merchandise. These are operations of trade. They ought to be left to those who are interested in them, in the same manner that the incursions of the law are encountered by other classes of citizens."—*Messrs.*

In respect to the controlling power of a bank founded by the late United States Bank, over the local currencies of the states, to prevent or to diminish fluctuations in the rates of exchange, see the remarks in "Suggestions on Banks and Currency," published by the late United States Bank.

"The only way in which a Bank of the United States can regulate the currency is by keeping its own loans and discounts within narrow bounds, and by a regular payment of the balances due to it by the state banks. The state banks, by the same means, can regulate the local currencies, and check each other and regulate themselves. Where this does not succeed, the influence of the national bank is of great importance and highly to be desired. It is practically difficult and generally unpopular; though it may be made so, if the bank was forbidden to use the public deposits, beyond its own benefit."

Mr. Lee observes:—

"That a central bank with a large capital, might be useful in regulating the currency, and over-loans of the local banks, we have never doubted, provided it was under the government of persons who had the skill, the honesty, and the management to manage it upon strict conservative principles—somewhat on the plan of the Bank of France. Such an institution would not answer the purpose of those influential persons have in view, who are the most powerful in the country. However, its founders and promoters were sincerely desirous to conduct it upon strict and honest banking principles, they would not be encouraged by the government, nor even by the persons who should be appointed by the government, or more commonly those *self-appointed persons*—who, upon the establishment of our banks are organised, have an interest adverse to the interest of the stockholders, and to the public as recipients of their paper issues."

"There were periods, when the late United States Bank, by its skill and prudence. It was enabled by its moderate issue of paper, and comparative strength, to check the over-loans and over-issues of the other banks. However, extremely unpopular while thus exercising its power, it was, however, extremely unpopular while thus exercising its power. The severe contraction, Mr. Appleton has shown in his passages extracted from his pamphlet, which was forced upon the late United States Bank kept its issues and loans within those bounds, which it should never have strayed, in order to accomplish a purpose which was exceedingly unpopular, and induced many of the state banks to withdraw from operating within them by taxing the branches, and by causing great annoyance."

We do not find any grave, intelligent, and thinking man, who has caused the most extensive and often ruinous speculation in the purchase of lands (See *Public Lands* hereafter) and the establishment of public works and companies, of loss to cotton planters

manufacturers,—to the holders of bank stock,—and to the general credit of the United States.

But still we do not find that any remedy is practicable, while that great *moral and political rottenness of the United States* exists, and predominates, in all parts of that great republic: that is speaking, and voting, and acting, not for imparting truth, wisdom, or usefulness, but for acquiring, and maintaining POPULARITY.

The *moral and political rottenness* is forcibly described by Mr. Lee, after commenting upon the following passage by Dr. Macvicar, lecturer on political economy in Columbia College, New York, in his letter entitled "Hints on Banking."

"I fully agree with you (says Dr. Macvicar), that there is no subject which comes before our legislature, *in which the people at large have so deep an interest*. Other laws touch but a portion of society, and, in general, that portion only which is interested in their enactment, and aware of their operation. Banking laws, on the contrary, operate upon all ;—*through the medium of the currency every man's interest is affected, and that in a manner so imperceptible, and yet so certain, that though he feel the evil he cannot foresee it; and even if he could foresee it, he could not avoid it*. The currency, in short, being as it were, the life blood of society, which circulating through every limb and member, carries disease or soundness to its smallest and extremest points."

Again—"Were the abuses of banking confined to what may be termed its commercial evils, and its paper never passed out of the circulation of commerce, the remedy would be as simple as it would be efficacious, viz. :—to cut off all restrictions, and to leave the business of banking to be regulated by the necessary laws of credit.

"But the money of banks is not confined to the transactions of merchants; it is issued of such denominations that it passes into the ordinary exchanges of society, into the hands of those who take it not as a promissory note, *but as an equivalent of value*. It becomes, in short, the substitute for the coin of the country, which it drives out by its superior cheapness, and in this point of view is liable to a new train of evils.

"It is in this point of view, alone, that it requires the interference of the legislature, who, as the guardians of the coin of the country, acquire the right to regulate its substitutes. It becomes them, therefore, *to guard the interests of the many and ignorant*, by thus far limiting the natural freedom of banking as to prevent the currency being displaced by worthless paper."

"These are the views of a learned and disinterested teacher of the important science of political economy—uninfluenced by any other consideration than a laudable desire to inculcate truths of the greatest importance to his fellow-citizens. *The opinions here expressed, in respect to the influence and effects of a well or ill-constructed currency, or a well or ill-managed banking system, upon the welfare of society generally, will meet the concurrence of every person of common understanding, and common reflection, who is possessed of an ordinary degree of information upon the nature, functions, and uses of money*. UNFORTUNATELY THE NUMBERS, AS HAS BEFORE BEEN REMARKED, WHO COME WITHIN THAT DESCRIPTION OF PERSONS, EVEN AMONG THE BEST EDUCATED AND MOST INFLUENTIAL PORTIONS OF SOCIETY, ARE BUT FEW. Of the correctness of that assertion, few persons, we imagine, will doubt, who have read with attention any considerable portion of the speeches of prominent and influential persons, together with the most popular periodicals and public journals, wherein the subjects in question have been discussed; or who have mingled much with the classes to whom we refer, and at moments, when the banking, currency, and credit system of the country, was the theme of conversation.

"They must have found, generally speaking, such an entire absence, in the minds of the persons in question, of the *most elementary truths of economical science*, or what is worse—so many *baneful prejudices and erroneous notions worked into their belief*, by the *speeches of popular politicians, to whom the majority of men look for light and guidance*

in all such matters—as to have rendered a discussion of those topics difficult, *unsatisfactory and unprofitable*.

“In the more public situations than the limited circles in which most men move, the effect of controverting, or even of doubting, the soundness of the popular notions entertained upon the subject of banking, has been, even among persons of kind feelings, to bring suspicion and odium on those who were considered as obstinately and perversely maintaining opinions extremely injurious to the best interests of society—of supporting opinions *correct enough in theory, but practically unsound—and mischievous*, if carried out to their consequences. An individual holding such heretical views of currency and banking was denounced, as ‘*anti-bank*,’ viz.—as being influenced by hostile feelings towards the directors of banks rather than the system on which banks are conducted, or to some other motive equally derogatory to the character and disgusting to the feelings of the advocate of a sound and honest currency.

“On the other hand, if the opposition to the *system of a fluctuating and fraudulent paper currency*, came from a person known to be desirous of entering upon public life, or was already engaged in the public service, it has commonly proved injurious, if not fatal, to his wishes. It was not necessary to answer, to deny, or to disprove the soundness of his opinions, but merely to hold him up as a ‘*hard money aristocrat*,’ or a ‘*hard money democrat*,’ and both parties would indignantly excommunicate him. If this did not answer the intended object, the finishing stroke was given to his popularity, and to his character, in the estimation of over-zealous, deluded party men—by adding to the terms of reprobation, usually bestowed upon dissenters, that of ‘*radical*’—and whether the unlucky dissenter was *radically right* or *radically wrong* in his views, according to the standard of common sense and common honesty, it was sufficient for the purposes of his opponents—that he was a ‘*radical*.’

“Now, although reasoning upon general principles, one might imagine, that in a country praised for the freedom of its institutions—if for nothing else—any person of a manly independent mind, and who was in circumstances above the condition of a common pauper—would deride and despise such a feeble attempt to hamper his understanding, and to abridge the freedom of opinion—yet such a conclusion would pretty generally be condemned as a false one.

“It would be deemed a false conclusion, because it would be *unwise to do, or omit to do, any act that might impair the popularity of a citizen*. One of the peculiar, if not one of the fortunate, characteristics of this great and enlightened nation, is—that any or every individual in it, endowed with a *common share of physical and intellectual power, and a common share of sanity*, or possibly without a common share of that mental quality, may reasonably hope, if in accordance with his inclinations, to be raised to some important or high station. For instance—to be a *judge*, a *governor*, a *general*, or *commodore*—or, if less ambitious, *member of the national or a state legislature*, or of the *common council*, or of the *board of selectmen*. But if no room in that direction, then to be *president of a bank, bridge, railroad, or canal company, or some other of the thousands of corporations*. At any rate, as a never failing, unexhausted recourse for the gratification of the ardent and lofty aspirations of public spirited men, he might hope to *preside over some of the tens of thousands of caucusses and conventions and mass meetings*, which are annually assembled in all parts of the union, for the purpose of *enlightening the people*, and, at the same time, for the equally important purpose of promoting the *disinterested views of their patriotic leaders*. Or, if the expectant of public and political offices and honours, should be so singularly unfortunate as to be disappointed of any of these appointments, he may be induced, by his friends and followers, to yield a reluctant and patriotic consent to become a—candidate for the presidency of the union; an office which, it would appear, from the characters and qualities of some of the patriotic persons who have generously offered to accept that station, is *fit for any one who is fit for nothing else*.

“But to insure any thing like a certainty of attaining one of these offices—even that of the presidency—it is expedient and necessary that those who aim at their attainment, should acquire and retain—not reputation nor character—those not being generally

deemed indispensable qualifications for office—but *popularity*. Now *popularity is one of those political virtues which cannot be attained*, or if attained, may not long be preserved by a public man *who unwisely and perversely* undertakes to maintain an independence of mind, and *an independence of action*. In the *un-free, slavish, aristocratic countries of the old world*, there may be a different meaning attached to the term *freedom*, but in a nation blessed with free institutions—*freedom of opinion consists in the submission of one's intellectual independence to the will and wishes of others*.

“In respect to the obnoxious and vituperative terms which have been applied for the purpose of rendering those persons unpopular who have impugned or called in question the soundness of the principles on which our system of currency, credit, and banking, has been conducted—the odium brought upon the persons in question, however despicable, have been the means employed to accomplish that purpose—has had the effect to lessen or to destroy the influence and power of some of the ablest men engaged in political life. No doubt, too, from that cause, many competent and independent men have been prevented from entering upon a public career, who had the disposition and the ability to render important services to their fellow-citizens, and more especially in every thing relating to banks, banking, and currency—subjects on which most of our legislators are but indifferently informed.

“In this state (Massachusetts) where there is not an unusual degree of intolerance felt towards men of independent minds and independent characters, several of the most intelligent, efficient, and high-minded members of the legislature have been rendered *too unpopular* to be renominated, in accordance with the wishes of their most intelligent constituents, because they freely, forcibly, ably, and honestly, expressed opinions, in or out of the legislature, upon banking, currency, and credit, that were at variance with the popular notions of the day.”—*Mr. Lee's Letters to Cotton Manufacturers*.

The statement of Mr. Forward, secretary to the treasury, on the presentation of Mr. Tyler's National Exchequer Plan, embraces one of the most desperate expedients for a government, or, a country:—

“Debts due to government are now paid in specie, or in the notes of specie paying banks. Let us suppose that some exigency should come suddenly upon the country, requiring the immediate assessment of heavy taxes, and that the same exigency should compel all the state banks to suspend specie payments. In such a posture of affairs how could taxes be paid? Of specie there would be little to be had; of the bills of specie paying banks none. Government would be driven by absolute necessity to the use of paper resting on its own credit, and created for the occasion. It would have no other resource. All must see how vastly useful the system now proposed would be upon the happening of such an emergency. The exchequer would be found in operation, and in possession of a certain quantity of specie; its notes would become familiar to the public; it would have, in addition to its specie and its own established character, the amount of revenue, whatever that amount might be, to sustain its circulation.”

Mr. Gouge observes, many years before, and at a period when there was no moneyed crisis in the United States:—

“No instance is on record of a nation's having arrived at great wealth without the use of gold and silver money. Nor is there, on the other hand, any instance of a nation's endeavouring to supplant this *natural* money, by the use of paper money, without involving itself in distress and embarrassment.

“Government issues of paper would be incentives to extravagance in public expenditures, in even the best of times; would prevent the placing of the fiscal concerns of the country on a proper basis, and would cause various evils. Nor is a system of banking in which the government should deal in exchanges, after the manner of the present bank of the United States, at all desirable. It would be as reasonable in a man to wish his flour transferred from Pittsburg to Charleston by the public officers, as to wish his money transferred through such a medium from St. Louis to Philadelphia. To

manage its own fiscal concerns, and to manage them well, inas-  
of any government. The financial operations of the United States  
be strictly limited to the collection, safe-keeping, and disbursing  
and the transferring of them from the places where they are collected  
they are disbursed. Further than this, government should have no  
banking and brokerage than it has with baking or tailoring."

As bearing on the currency question, the following Vethake's "The Principles of Political Economy:"—

“ Another method by which the government can profit direct gains of banking, is, as has sometimes been done, to assume the banker. The directors of a bank will, in such case, be public legislature, or by some authority emanating from the legislature of these institutions may be appropriated to meet the various treasury. This system of banking is especially objectionable on account of the great liability to the being perverted to party-political, or still

"In order to prevent the monetary system of a country from becoming a political instrument, to enable it to maintain the legitimate opposition of public opinion, it is in a high degree desirable that it should be as little under its control as is practicable, *considering the facts of the case.*"

Mr. Alexander Hamilton, whose upright mind ranks  
ton, among the men of whom America may, with just  
be proud, has recorded the following opinion, which  
they bear any love for their country, would act wisely  
gulating maxim in fiscal legislation :—

“ The emitting of paper money is wisely prohibited to the spirit of the prohibition ought not to be disregarded by the. Though paper emissions, under a general authority, might applicable, and be free from some disadvantages which are appl by the states, separately, yet they are of a nature so liable to be affirmed, *so certain of being abused*—that the wisdom of in never trusting itself with the use of so seducing and dai times of tranquillity it might have no ill consequences; it arranged in a way to be productive of good; *but in great and almost a moral certainty of its being mischievous.*”

In a speech made by Mr. Webster, while a member upon a bill to incorporate a bank of the United States, drawn from the bill for the establishment of an exchequer, but, in the most important principles of that bill, we find the following purpose of the bill was to establish a bank whose capital was to be coin and partly of government stocks and treasury notes. The proposed exchequer was to consist of coin and treasury notes.

" I am sure, sir, that the advantages which would at present be greatly overrated. To look to a bank as a source capable of circulating medium to the country, but also of supplying the war on the war, especially at a time when the country is without much more than will ever be obtained. Such high wrought appointment. The means of supporting an expensive war acquisition. Banks are not revenue. They cannot supply it facilities to its collection and distribution. They may f

temporary loans to government, in anticipation of its taxes, and render important assistance, in divers ways, to the general operations of finance. They are useful to the state in their proper place and sphere, but they are not sources of national income.

"The fountains of revenue must be sunk deeper. The credit and circulation of bank paper are the effects, rather than the causes, of a profitable commerce, and a well ordered system of finance. They are the props of national wealth and prosperity, not the foundations of them. Whoever shall attempt to restore the fallen credit of this country, by the creating of new banks, merely that they may create new paper, and that government may have a chance of borrowing where it has not borrowed before, will find himself miserably deceived. It is under the influence of no such vain hopes, that I yield my assent to the establishment of a bank, on sound and proper principles."

The following statement and tables (which exhibit a condensed historical view of the American currency for more than a quarter of a century), were prepared by Mr. Gouge, editor of the "Journal of Banking," author of "A Short History of Paper Money and Banking," and formerly of the United States treasury department:—

"On the 30th of August, 1814, the Philadelphia banks suspended specie payments for the *first time*, and the other banks in the middle and southern states within a week or two of that date. The New Orleans banks had suspended payment in the April previous; but the banks of Kentucky and Ohio continued to pay specie till about the 1st of January, 1815; and the only bank then in Tennessee did not suspend payment till July or August, 1815. Through the whole of this, the *first* general suspension of specie payments, the banks of New England continued to pay specie, with the exception of a few banks in Maine that stopped payment early in 1814.

"During the first suspension of specie payments, the notes of non-specie-paying banks were received in payment of public dues.

"On the 1st of January, 1817, the bank of the United States commenced operations at Philadelphia. Of the effect it had in "regulating the currency," the reader can judge for himself. The table gives the prices of western and southern bank notes at Philadelphia, in that and each subsequent year.

"On the 21st of February, 1817, the United States government refused any longer to receive the notes of non-specie-paying banks in payment of public dues.

"In 1824, the system known as the Suffolk Bank system was adopted in New England. The reader, on scanning the table, will not fail to be struck with the *uniformity* of value which the notes of the many hundred banks of the eastern states have since maintained, and this whether the banks have sustained or suspended specie payments.

"On the 11th of May, 1837, the New York and Natchez banks suspended specie payments; and as fast as the news spread from these two cities, east, west, north, and south, the other banks suspended also. In this, the *second* general suspension of specie payments, the banks of New England were included.

"In one year afterwards, or in May, 1838, the New York banks resumed specie payments, and their conduct was immediately followed by the banks of New England. These banks have since (with the exception of the banks of Rhode Island) steadily maintained specie payments.

"In August, 1838, the banks of Philadelphia professed to resume specie payments; and by the 1st of January, 1839, there was at least a *nominal* resumption of specie payments throughout the union.

"In a little more than a year, or on the 9th of October, 1839, the banks of Philadelphia suspended specie payments for the *third* time, and their example was quickly imitated by all the banks to the south and west, and also by the banks of West Jersey and Rhode Island. The bank of Missouri did not, indeed, suspend payment on its own notes; but as it traded on the notes of other western banks, it became an issuer of inconvertible paper. The banks of Rhode Island soon resumed specie payments. The banks of South Carolina resumed specie payments in June or July, 1840. All the other banks

the south and west of New York (with the exception of the 1 others scattered in different places) continued to refuse pay

"January 15th, 1841, the banks of Philadelphia resumed sustained them for about twenty days, or until the 4th of February, fourth time, suspended specie payments; until the 18th and

"In the states of Louisiana, Mississippi, and Alabama in the union, the aggregate amount of bank capital, according to the treasury department, as in previous statements as have been published, it would appear that

capital in these three states is now something less than 23,000,000 dollars. This is its nominal value, but from the quality of the securities in which it is invested, the proprietors of the shares might not be able to realise more than half the sum stated were the concerns of these banks brought to a settlement. In the states of Illinois, Michigan, and Arkansas, and in the Florida territory, the banking results descend still nearer to the point of annihilation than in the instances just cited.

"A reference to the return of the aggregate bank capital of the country affords further evidence of the enormous extent of the losses from banking to which the shareholders have been subjected. At the close of 1839, the entire bank capital was 358,442,692 dollars. Since that period, and down to this time (November, 1843), considerable sums have been withdrawn by the closing up of concerns which had not lost all their capital. On the other hand, much larger additions have been made by the creation of a considerable number of new banks; to a greater extent in the state of New York than elsewhere, since, under what is termed the 'free banking system,' *every individual who has any property can become a money-coiner by pledging it to the state government, and, consequently, every individual is strongly tempted to become a creator of paper money for the chance of gaining a profit on the amount which can be kept in circulation.*

*Free Banking System of New York.*—"It is impossible that a system of banking like the one now in operation in New York, which holds out such strong inducements to over-issuing and over-lending, should not, sooner or later, be productive of injurious consequences to the community generally, and especially so to the trading portion of it. Under the free banking laws of that state, the comptroller is required to deliver bank-notes to any individuals for the purpose of being thrown into circulation to any extent which may be asked for upon a corresponding amount of state stocks or mortgages being deposited with him as security for redemption.

"In the enactment of this law, 'the only object,' says Mr. Gallatin, 'which seems to have attracted the attention of the legislature, is not the danger of suspension, but the ultimate redemption of the notes put in circulation.' That object has not, however, always, nor generally, been accomplished. In the numerous instances of failures of the free banks, the securities deposited for the redemption of their issues have been found insufficient for that purpose. This has been one source of loss to the bill-holders, while the long period usually required for the conversion of real estate and stocks into money is another source of injury, since most of the persons in whose hands the issues of failed banks usually remain are constrained, by their urgent wants, to sell them at a great loss to those who have the means of purchasing them on speculation.

"One of the reasons urged in favour of permitting every individual in a state to become an issuer of paper money was the superior safety of state stocks and mortgages, as a basis on which to found a paper circulation. In respect to state stocks, it may be observed, that the great mass which have been issued are considerably below par, and no inconsiderable portion have fallen fifty per cent below the par rate, and from thence to nearly the point of annihilation; while the solid ones are all in the hands of men who are not inclined to part with them on any terms to free bankers.

"A reliance on a steady and permanent value of real estate has proved to have been equally unsafe. Take, for instance, real property in the city of New York, which is the most wealthy one in the country, and has made the greatest advancement in business and population, and, consequently, it might reasonably be concluded, that real estate would there maintain its value if anywhere. A reference to the official returns of the assessed value of real estate in the city of New York, gives the following results:—

Y E A R S.	Dollars.
1833.....	114,129,561
1835.....	143,732,425
1836.....	233,742,303
1839.....	196,778,434
1842.....	176,489,042

"In 1836, the population was estimated at about 280,000,000; in 1840, it was, by an enumeration, found to be 312,710,000; and, in 1842, it was estimated at 350,000,000. There had been erected, between the years 1836 and 1842, for the accommodation of

"The actual decline, then, in the value of real estate in 1842 is 115,688,837 dollars, being the difference between what it was in 1842, and what they would have been, had the prices of real estate remained the same. It may, perhaps, be imagined that the valuation in 1842 was too low, in consequence of the depression in business and other causes of the time. It might be some reason for such a conjecture, were not the fact that, by a subsequent decline in prices of real estate, as will be seen, when they are laid before the public."\*

1840.....	106,968,572	6	00	1	18	0	73	0	67	36	12 25

"It is true, then, that during the years when wheat and other cereals were at the highest prices, we imported to the extent of several million tons from countries in which the cost of production is usual for countries where prices are almost always in advance of our prices."

"The number of banks, however, which have been governed by men who have had the firmness of principle to resist temptations laid open to them by the false position in which they are placed, as trustees of property of which they are likely to become the principal borrowers; the number of banks which, under the management of such men, have been conducted with a prudent and honest regard to the interests of the stockholders, are few in comparison with those which have been deeply injured or utterly ruined by the imprudence or misconduct of their managers. 'It is believed,' says Mr. Nathan Appleton, 'that in all cases of bank failures in Massachusetts, the failure of the principal stockholders and directors has accompanied, or preceded, the failure of the bank. The great point, therefore, to be guarded against is, the liability of banks to fall into few hands to be used for their private speculations.' This sound advice from one familiar with the art of banking, as well as the principles of banking, was given in 1831. It was, like many other wise suggestions from the same source, disregarded by the shareholders of banks.

"In some other parts of the country, entire capitals have been sunk in gambling operations of the directors of banks and their associates, who were interested with them; and the instances are not rare, where the assets of a bank proved to be insufficient to redeem its circulation; while in other cases, the depositors, bill-holders, and proprietors, were all stripped of their property. There were banks in this state (Massachusetts), and some of them under the management of individuals who clamoured loudly against all banks as '*aristocratic monopolies*,' whose assets would not redeem their circulation and their deposits. In these instances, the losses fell with the greatest weight upon the most helpless and poorest members of society. And such has generally been the case with ruined banks, of whose impending fate the managers and their friends, and others who can obtain access to correct sources of information, have had such early warnings as to induce them to sell out their shares before they fell into discredit, and the buyers, as one might reasonably expect, have generally been among that class of the community to which we have referred.

"In truth, it cannot be too often repeated, that the losses upon banking fall mainly on the most helpless portion of the community, while the benefits which may be supposed to arise from the use of bank capitals are chiefly shared among the most shrewd, enterprising, and intelligent classes of society.

"The shares in the United States Bank were, more than in most instances, held by persons of large capitals as permanent investments, and by others who dealt in them on speculation. Still, a very considerable portion of its capital, at the period of its ruin, belonged to the class of persons referred to. Accordingly, Mr. Dunlap, its president, in a memorial to the legislature of Pennsylvania, thus alludes to this portion of its stockholders. 'They are widows, orphan children, persons retired from business and active life, and not capitalists only; and all of them have been and are sufferers against their will, without their personal agency, and beyond the possibility of redress by themselves.'

country has been in its natural and sound condition, namely, on a level with the currencies of the countries from whence those imports were made.

"It was not, however, because of an insufficiency of food of home production that the foreign articles were imported. They were forced upon us by an artificial rise of prices, originating in, and promoted by, over-issues of currency and credit, accompanied, as usual, by a spirit of speculation, which was more strongly directed to transactions in provisions than to dealings in other products of industry; and more especially were the articles of beef, pork, and flour, the favourite objects of the gamblers, and the banks in the middle and western states which afforded them the means of elevating and sustaining their prices.

"The importation of provisions made a strong impression on the minds of those who overlooked or were ignorant of the effect of a redundant currency, and of the speculative movements superinduced by it on prices. They naturally regarded it as an evidence that the rise of prices was caused wholly by a deficient domestic supply. If they had looked into the custom-house returns they would have seen, that a large amount of other articles; of which, as of provisions, we had an abundance, and even a superfluity, were also imported, and, in many instances, were re-exported. There was not, in point of fact, any insufficiency of home-produced grain, or provisions of any kind, during the years in which we imported these articles. This will be made manifest beyond all contradiction or disbelief."

" Before the final bankruptcy of this institution, a large speculators and by wealthy individuals who had the means and prospects, were sold out by their proprietors, and probable persons of smaller means, and, consequently, the stockholders' career, have become more numerous than at any earlier period. In 1840, it appears that there were—

	dollars.
2257 persons holding stock of the value of	100
1577 " " " "	2,000
614 " " " "	10,000
30 " " " "	50,000 and

" From the comparatively few heavy shareholders, it makes the largest portion of the sufferers by the ruin of the United States Bank, narrow, or in very moderate pecuniary circumstances. In the following statement:—

The number of shares held by females .....	executors and guardians
" " " "	trustees .....
" " " "	benevolent institutions .....

" These unfortunate persons not only lost the par value of the shares, but a considerable portion of the shares were purchased at twenty-five per cent; and, in some instances, as high as fifty per cent. prices were obtainable within a short period of the origin of the speculation. In consequence of the feelings of the sufferer, there can hardly be a doubt that the shares were purchased at par and upwards after its depreciation, which, to a great extent, were of little or no value, and the worth of the shares, when purchased, was not equal to half the value. A still larger amount was purchased somewhat under par, in a wretched condition. Such will generally be the case with ruined persons who manage them and others acquainted with the facts necessary to sell out their shares, and they will generally fall into the hands of the most helpless portion of the community, they being induced into purchases of stocks at the declining prices usually attending an unthrifty or a ruined corporation.

" An official statement, emanating from the banks in the United States Bank, shows that a still greater proportion of the shares were owned by small proprietors, and by charitable institutions, by females and by the latter institution. The returns of shareholders in 1840 show

	dollars.
6327 persons holding stock of the value of	100
2831 " " " "	800
2461 " " " "	1700

" The balance of their shares were owned in sums of 40 cents. Those larger proprietors were probably, as in case of the United States Bank, retired from the active pursuits of life, and who, consequently, and to the entire ruin of many of them, had confided their property to agents who, as events have shown, were utterly unworthy of

" The number of shares in these institutions held by

Females .....
Executors, guardians, and trustees .....
Officers of benevolent institutions .....

" It is probable that a great portion of the remaining shares were owned by aged and retired persons, or by others who had no means to manage their property, and, therefore, were willing to invest in the best events, the income would be below the ordinary rate of interest compensation for a rate of interest restrained by an impolitic market value of money, they expected *safety*, but they failed in the long run, as respects most of the banks, while banks adhere to the principles they are based and administered."

Dividend, Apr. 1843.....	....	....	....	....	442,900				
Increase.....	....	....	....	....	38,575				

This gives six dividends on a capital of 17,000,000 dollars, as follows:

	dollars.		dollars.
April, 1842 . . . . .	442,900	October, 1843 . . . . .	417,000
October, 1842 . . . . .	471,150	April, 1844 . . . . .	426,300
April, 1843 . . . . .	481,475	October, 1844 . . . . .	480,000

This is the largest October dividend, and shows considerable improvement in the profits of the banks during the past summer. Notwithstanding the low rate of money, as compared with 1843, there is an increase of fifteen per cent in the profits, which probably arose from an extension of credits in that proportion. Neither banks nor stocks, however, seem to command confidence, as a means of investment. The experience of past years has been such, as to prevent much disposition to put money in banking concerns.

“From the remarks of Mr. William C. Bryant we extract the following passages. They were written antecedent to the suspension of 1837, and are in correspondence with the views maintained by him at a still earlier period, and before there were any signs of a revulsion. They indicate the opinions of one familiar with the true principles of currency and banking, as well as a knowledge of the practical results of our system of banking; and thus he was enabled to foresee and predict the ill consequences which must ultimately flow from a violation of those principles.

“‘One of the most curious circumstances,’ says he, ‘connected with the universal rage for speculation, is the exceeding gullibility of the people. No scheme seems to be too vast to stagger their credulity. The most impracticable plans are received as easy of accomplishment, and the most stupendous projects are entered upon with undoubting confidence, as if they were ‘trifles light as air.’ The thought obtrudes itself, apparently, into no man’s mind, that there is a stopping-place, where all this rapid motion must cease; that the machine, urged to too great velocity, will at last fall to pieces. No one seems to anticipate that there must come a time when the towering fabric which speculation is building up, grown too huge for its foundation, will topple on the heads of its projectors, and bury them in its ruins. Every one acts as if there were no fear that the explosion would take place, while he is in danger. Each one stretches out his hand to grasp his share of the gambler’s spoils, without any idea that, like fairy money, it may turn to worthless rubbish in his hands. A general infatuation has seized the

minds of the community, and each one grows wilder in his lunacy from listening to the ravings of those around him.

“ ‘ In the meanwhile, the speculators would, indeed, seem to have discovered the Midas art. Their touch turns every thing to gold. They are all getting rich. One buys the refusal of a farm for a vast deal more than it is intrinsically worth. He sells it to another for a large advance before the term of payment has arrived. The second sells it to a third, the third to a fourth ; and, in this way, it probably passes through a dozen hands, before the first instalment of the original price is paid. Each successive purchaser fancies himself rich, and the one into whose possession the property falls last has magnificent plans in prospect, and thinks that he is the richest of all. But pay-day must come, and come ere long, we fear, to many an unprepared speculator, and rudely wake him from his dream of fancied wealth.

“ ‘ The vast and sudden increase which the paper circulation of this country has undergone within the last eighteen months (from 103,692,495 dollars to 140,000,000 dollars), is the cause of the feverish thirst of riches which the community now exhibits ; and whatever shall check that circulation, and turn it back upon the banks, will arrest the disease, but arrest it with a violence that to many will prove fatal, and give a fearful shock to all. Paper money is, to the people of this country, ‘ the insane root that takes the reason prisoner ;’ and they can be restored to sanity only by withholding such stimulating and dangerous aliment. As it now is, their appetite grows by what it feeds on. The demand for money increases with each succeeding day ; and every new loan of bank credit but gives rise to new projects of speculation, each wilder and more chimerical than the last.

“ ‘ The effect of this pervading spirit of speculation (or spirit of gambling of the most desperate character, as it might more properly be called), on the morals of the community, is dreadful. Its direct and manifest tendency is to blunt men’s moral perceptions, and accustom them, by degrees, to acts and devices of traffic which an honest, unsophisticated mind would shrink from with horror, as frauds of the most flagitious dye. It creates a distaste for the ordinary pursuits of industry ; it disinclines the mind from the gradual accumulation in some regular vocation, and kindles an intense desire, like that expressed in the prayer of Ortogrul of Basra, ‘ Let me suddenly grow rich !’ To this gambling spirit of the day we may directly trace the most of those prodigious frauds, the discovery of which has recently startled the public mind. ‘ Startled the public mind,’ did we say ? The phrase is wrong. The public were not startled. They heard the stories with the most stoical indifference ; and if any exclamations were uttered, they conveyed rather a sentiment of commiseration for the criminals, than one of detestation for their stupendous crimes.

“ ‘ But the day of the madness of speculation is drawing to a close. The time must come, nor can it be remote, when some financial or commercial revulsion will throw back the stream of paper circulation to its source, and many a goodly vessel, which had ventured too boldly on the current, will be left, by its reflux, stranded on its shores. Circumstances may yet defer the evil day for a while, but it cannot be far off. A failure of the cotton crop, or any one of the thousand contingencies to which trade is perpetually liable, will give a shock to the widely expanded currency of the country, which will be felt with ruinous force through every vein and artery of business. Woe unto them in that day who do not now take timely caution. Their cities, and towns, and villages, which they now are so fertile in planting, as if they thought men might be multiplied as rapidly as paper money, will remain untenanted and desolate memorials of their madness, and the voice of sorrow and mourning, instead of the din of our present unreal prosperity will be heard through the land.’ ”

How very applicable are these remarks to the railway plague of 1845, in England. Mr. Lee, in alluding to paper securities, says :—

“ Of the description of securities referred to, and for the most part created by one class of persons, for the purpose of getting possession, through banks or by some other contrivances, of the property of other persons, there must have been, at one period—say from 1834 to 1841—some thousands of millions of dollars in existence within the compass of those few years—the ultimate effect of which was to injure all the banks—to ruin

a majority of them—and finally to transfer from the most industrious, prudent, economical, useful, and productive classes of the nation, a considerable portion of their estates, to the most imprudent, reckless, and unprincipled portion of it.

"Of the various classes of citizens who have suffered from this vicious system of banking and gambling—the cotton planters, probably, come in for the largest share of the losses—unless the manufacturers of cotton may be considered as having the unfortunate pre-eminence in that respect. First, in the enhanced prices paid for their raw material and for their labour—consequent upon a superfluous and fluctuating currency. Secondly, in the amount of bad debts on the sales of their manufactured goods. Thirdly, in the delusive appearances of prosperity occasioned by a redundant currency—causing artificially high prices for goods, and leading to the establishment of more manufacturing concerns than the real wants of the country required—and more than would have been established under the more natural and healthy operation of a sound and honest currency. The high profits gained by manufacturers, at periods when prices were unduly enhanced by the action of an expanding and expanded currency—together with an unnatural demand for goods beyond the *paying ability* of consumers—induced by the improvident and too extended trustings of the sellers of manufactures.

"The evils we have described are the natural, if not the inevitable, fruits of a vicious system of currency ;—of a currency issued by 900 banks, created and regulated, if regulated at all, by thirty states and territories, managed by 9000 directors, who have the power, and who exercise it too, of expanding and contracting the circulating medium at any moment and to any extent, they may deem expedient, and, consequently, of causing great variations in the prices of commodities. The effect of their operations lead to dangerous speculations, and imprudent and dishonest transactions, and producing what are termed *good times*. The reaction, however, must come. Then come the fall of prices, stagnation, depression, discredit, despair, followed by commercial and monetary convulsions and revulsions ; suspensions of individual payments, failures and repudiation ; sometimes ending, as in 1814, and more recently in 1837, in the failure of all the banks ;—*of those institutions which are allowed the privilege, or it is taken by them, of circulating 150,000,000 dollars of paper notes on a reserve of coin not usually exceeding 30,000,000 dollars or 40,000,000 dollars, with an engagement, on their part, to maintain the currency of the country in a stable and sound condition.*"

The capital of all the banks in New Orleans was, in 1830, 4,665,980 dollars. This was increased to 39,943,832 dollars in December, 1837, a period of seven years. This capital was held or procured as follows :

	dollars.
Procured in Europe, mostly on the credit of the state .....	20,725,080
" other United States .....	6,945,710
" or held in Louisiana .....	12,273,012
Total capital paid up .....	39,943,832

"This capital was subsequently increased to 41,711,214 dollars. The increase

of banking facilities at this rapid rate was evidently in of the city, which in the same period had increased its credits constantly accumulating, sought other than employment, at the same time that they greatly facilitated means of operating in cotton—the principal article of export market for that article became altogether speculative and, by a singular inversion of things, the rate at the same place would always be higher in New Orleans, the point of purchase principal market of consumption. If, through over-production affairs abroad, the market was checked, a long chain of events followed, which made its evil influence felt throughout the Union where the sterling bills were mostly negotiated. The fact was disastrous. The two outer columns of the rate of specie and gold indicate the depreciation of the currency through all the years since its place in October, 1839. Under the present law, the banks are required to vault one dollar for every three dollars of their bills in circulation. The real estate banks, which are allowed ninety days. Yet in the remarkable manner in which capital has been drawn out and been sunk by the inherent vices of the system. In the same general features have and do exist. All that capital accumulation of the years subsequent to 1832, was drawn in by speculation in raising prices and creating an extraordinary general fall of property, ceased to exist, leaving, however, the necessary for the transaction of business. The quantity of change of commodities may be illustrated by the comparison of cotton and flour, which are the most valuable, for the years 1832 to 1839, the average market value for each year. The average of cotton for the years, has been 515,280,000 pounds, and of flour 20,000,000 bushels. *Commercial Chronicle.*

## COMPARATIVE view of the Condition of all Banks in the United States, near the Commencement of each Year, from 1834 to 1840, inclusive.

The whole number of banks in the country at the present time, is 901, including 179 branches. In the column for 1840, of the annexed table, sixty-one banks and forty branches are estimated, for lack of fresh returns. In 1834, 5, 6, and 7, more or less banks or branches were estimated for the same reason. For 1838 and 1839, the returns appear to be complete. The estimated banks for 1840 are about one-ninth of the whole number, and comprise about one-tenth of the banking capital. The variation from fact cannot be material, as the estimates are based upon the returns of the previous year.

We have under the head of New York given statistics of the bank of that state down to the end of the year 1843. The following statements and tables include all the statistical information which we have been enabled to obtain, down to the close of the year 1845.

"The state of the currency throughout the union, as a great whole, has been in a most unusually contracted state. Of the banks in eighteen states, reported nearest to January, 1844, the results were as follows:—

	dollars.		dollars.
Circulation .....	50,328,587	Nett circulation .....	39,411,303
Capital .....	144,000,496	Specie .....	41,995,578
Notes on hand .....	10,737,224	Loans .....	192,036,751

"Of the amount of notes on hand, a portion were checks and cash items. The nett circulation was about 41,000,000 dollars, or near 3,000,000 dollars less than the specie on hand—a most extraordinary position of affairs, and eminently indicative of the blight which in the past few years, has overtaken paper credits."—*Hunt's Commercial Review*.

## BANKS of New York.

"From May to August is usually the season when travellers and traders coming to New York for pleasure, or to buy goods, or pay old debts, bring with them large amounts of money. It is also the season when the supply of foreign bills being the least, an export of coin springs up to supply the deficit. This year, however, notwithstanding the payment of 2,500,000 dollars New York state stock, due July 1st, and the resumption of the Pennsylvania dividends, the remittances are much less than last year. This arises from diminished imports, and from a better price obtained abroad for cotton sold, as well as for increasing quantities of general farm produce sold in England, under the modified tariff of that country."—*Hunt's Commercial Chronicle*.

Rates of sterling bills on London, and of sight checks on New York, with the receipts of specie, and specie in the banks of New Orleans during the following periods of 1844 and 1845:—

" From June, 1843, to June, 1844, the rate for sterling evinced violent fluctuations, as well as the rate for New York checks. The demand at New Orleans for eastern funds usually raises the rate to a premium as early as May 1st; at which period, in 1844, they were at 1 per cent premium. This year, on the 1st of June, they had only attained ½ per cent premium. The receipts of specie at New Orleans are also much less, resulting in a decline of the amount held by the banks of that city. The course of trade between the western country and New York usually turns upon New Orleans. The west buys its goods and merchandise of the northern and eastern Atlantic cities, and sells its produce to a great extent in New Orleans. The demand for northern funds, at New Orleans, is therefore proportioned to the extent of purchases, as compared with sales. When the purchases exceed the sales, specie usually leaves the banks of the states in the valley of the Mississippi, and descends the river to New Orleans, for investment in bills. This demand for bills has, in 1845, been less than during the two previous years; and, as a consequence, the specie of the New Orleans banks has decreased, and spread through the western states in general circulation, improving the state of currency, and promoting the soundness of the western trade. The west has been a good deal in want of a circulating medium; and that circumstance has opened the door to the circulation of considerable quantities of irregular paper. Of this description were the issues of some of the Michigan banks, particularly the bankrupt St. Clair bank. In Chicago, Illinois, there is a large circulation of what purports to be checks or certificates of deposit upon Wisconsin insurance companies. In Ohio, the want of a sufficient supply of currency led to the enactment of the law of the last session of the legislature of that state. A sufficient number of banks, under the state bank feature, have been organised, to constitute the state bank; and the governor has issued his proclamation to the effect that some concerns, having complied with the free banking portion of the law, are authorised to commence business as independent banks. The probability is, that new banks will multiply under the loose provisions for the state bank, until a disastrous reverse overtakes the whole. That branch of the law offers greater inducements to irregular banking than does the other branch of the same law. This latter is a copy of the New York free banking law; in relation to which, a most startling decision has been made in the Supreme Court of New York, by Judge Bronson, to the effect that the law authorising them is unconstitutional, and that the institutions organised under it have no legal existence. The conclusion of the decision of the learned judge is as follows:—

" We are then brought to the following results, all founded—not upon mere *dicta*—but upon the express adjudication of the Court for the Correction of Errors:—1. It is the business and duty of the court to examine and decide whether any law falling within the two-thirds clause of the constitution received the requisite number of votes to give it validity. If it did not, the supposed law is utterly void. 2. Associations formed under the general banking law are corporations;—and 3. The constitution extends to all corporations. The conclusion is obvious. Having examined and ascertained that the general banking law did not have the assent of two-thirds of the members of either house, it follows that, so far as it authorised the forming corporations or associations, it is utterly void; and the banking companies which have been organised under it have no legal existence."

"This decision, should it be sustained, involves the most in order to estimate which, we annex the following table :

BANKS of New York, distinguishing the Free

"The interest involved in these existing banks, is, it appears rather more than twenty-five per cent of the whole bank addition to which, there are some 12,000,000 dollars involved in the hands of trustees, &c. This is the second serious out of the loose, not to say careless, manner in which the state in the formation of laws, affecting in their operation the banks of the state. The state constitution provides a vote of two-thirds to each branch of the legislature shall be required to alter or amend, or renewing any body, politic or corporate, or for money to a local or private purpose. Notwithstanding these dollars were given to railroads on a majority vote, and a banks have been organised with reference to some paper, as a vote. And these great interests are now declared null and adherence to the organic law of the state."

STATISTICS OF THE SAVINGS' BANK OF NEW YORK.

"According to an official copy of the Twenty-fifth Annual Report of the Bank of Savings, in the city of New York, for 1843, March 8, 1844, it appears that the trustees have received from the 1st of January to 31st of December, 1843, the sum of 1,157, nature of drafts paid was 148,814 dollars, and the amount of deposits was 1,306,628 dollars."

"The following table exhibits the number of persons from whom deposits were received, and the amount deposited; the number of drafts drawn, and the amount paid out, in each month of the year, commencing January 1st, 1843, and terminating December 31st, 1843 :

"The following table presents a general view of the operations of the Bank of Savings, from the commencement of its charter, in July, 1819, to January, 1844 :-

"The foreign, as well as the domestic exchanges, have during the past year, 1844-5, evinced a remarkable steadiness ; causing them to assimilate, in a very great degree, to the state of the exchanges between the nations of Europe. As an evidence of this great regularity in price, we may take a table of the prices of bills on England at New Orleans, checks on New York, and the rate of sterling at New York, at corresponding periods throughout the year ;—also, the quantity of cotton and tobacco exported from New Orleans, from the 1st of September, when the cotton year commences, to the close of each month, as follows :—

COMPARATIVE Rates of Sterling, at New York and New Orleans.

"Cotton and tobacco form the basis of two-thirds of the foreign bills with which the markets are supplied. Therefore, that the quantity of these bills offering must be the greatest at those seasons when the cotton goes forward most freely—that is to say, in the month of December, when 200,000 bales of cotton, worth 6,000,000 dollars, went forward, the supply of bills must have been very much greater than in the month of June, when 50,000 bales, worth 1,500,000 dollars only, went forward. Most of these bills are sent to New York for negotiation ; and, by that means, become the basis on which the domestic exchanges turn, to a very considerable extent. In the winter months, therefore, when the largest supply of foreign bills on southern account is selling in New York, the greatest supply of drafts on New York is created, and the rate falls to a discount in the southern cities. In the spring months, when southern dealers are coming north, and payments mature for goods purchased north and east, on southern and western account, a demand springs up for northern funds, which raises the rate to a premium, as observed in the table. It is very remarkable that, notwithstanding the great irregularity in the supply of bills, the price has maintained a uniformity which, perhaps, the exchanges of this country never before exhibited, for so great a length of time. Two important influences have gradually come into operation, to effect this result. *One is the long continued abundance of money in England, and its comparative cheapness, compared with the rates obtainable for its use on this side of the Atlantic, and the facility of its transfer, by means of steam navigation ;* and also the increase of exchange operations with the continent, by means of which, arbitrations can be made to better advantage, in some cases, indirectly, than directly—thus affording a check upon too exorbitant a demand upon any one point ; as, for instance, knowing the price of continental bills in London, which are sold for cash. It is easily ascertainable which will be the best remittance to London, a sterling bill, or a bill on any of the continental cities—say Hamburg. The price of Hamburg bills in London being mks. 13.9½ shillings per £1., then the difference will be as follows :—

15,000 marks banco sold in London, at mks. 13.9½ sh.....	£	s.	d.
Less brokerage, 1-10 per cent .....	1103	8	11
Proceeds in London.....	1102	6	10
Remitted in sterling.....	£1111	12	1
Less interest, 60 days.....	9	5	3
	1102	6	10
£1111 12s. 1d. at 4.75, or 107.77, cost in New York ...	dirs.	5224	54
15,000 banco marks cost, at 35½.....	5315	06	

"Thus a premium equal to 7.77 per cent on sterling, is equal to  $35\frac{1}{2}$  for marks banco. An advance of sterling to 8 per cent would, therefore, make the marks (remaining the same) the best remittance to London; and, as the exports of produce to the continent are largely on the increase, the material for these arbitrations is greatly increasing. It is also the case, that the leading London houses are largely connected on this side of the water; and the fluctuations in the exchanges afford far too profitable a means of employing money, to allow them to take place to such extent as formerly. *The true par of exchange between New York and London, is about  $9\frac{2}{3}$  nominal premium.* It requires however, an advance to near  $10\frac{1}{2}$ , before gold can be shipped to advantage. When, therefore, bills are scarce, and command ten per cent, at a time when money is worth two per cent in London, and six per cent in New York, it is evident that considerable profit is realised by selling at ten per cent; employing the money here to better advantage than it can be employed in Europe, and replacing the bills when the crops come forward, at a difference, perhaps, of one per cent. These are powerful influences in preserving a steadiness of exchange, and are the reverse of that system formerly practised by banks at the south. Those concerns bought bills when they were cheap, and held them without interest, to sell when they advanced. Hence, unless they got a price equal to the accumulated interest, with a profit added, they lost money. Under such a system, the fluctuations in bills, and the margin between the north and south, were necessarily greater than when individual capital is applied, as now, to their regulation.

"The fiscal year, for the federal government, closed on the 30th of June, 1845, and the revenues are about 5,000,000 dollars less than the estimates. This has arisen from the diminished imports; and these, in their turn, have resulted from the fact that the imports of last year were in excess of the country, at a time when the low prices of produce necessarily compelled an economy in purchases of consumable goods, beyond that which is usually observed when the profits of planting and farming, arising out of high moneyed prices for produce, are large. Among the population of the United States, perhaps, to a degree greater than in any other country, the enterprise of the people keeps pace with their means; and the general trade of the country fluctuates, in a rapid and marked manner, with the temporary prosperity of the leading interests.

"The bulk of the people of the United States derive their means from the sale of tobacco, cotton, rice, and farm produce; all of which depend for their price upon the state of the foreign markets, where the largest proportion of the surplus is consumed. The tariff of 1842 was looked upon, by very many of the friends of protection, as too ultra in its nature to be permanent; and, as such, did not meet their entire approbation.

"In a popular government like our own, there is always a diversity of interests, and a variety of views in relation to the utility of leading measures. In most cases, there are real benefits derivable from legislation on commercial subjects, by one class of citizens, to the positive injury of some other class or classes. There is, perhaps, no subject of legislation, in which stability is of greater importance, than that of the tariff. In constructing a tariff, therefore, which shall serve the interests of all classes, and of the country at large, permanency is the quality which is most to be desired. It matters far less, in the long run, how high or how low may be the average per cent payable on imported goods, provided that rate is enduring. All classes, in the conviction that it is not subject to change, will accommodate themselves to its practical operation, and the business of the country progress steadily.

"On the other hand, a state of uncertainty paralyses the enterprise of citizens, stagnates capital, and imparts a sluggish movement to trade, which is not slow to evince itself in decreased employment, and reduced wages to the working many. Hence it is, that the benefits expected from any commercial measure, of a radical character, rarely, if ever, flow from it. No matter what may be the advantages offered to the employment of capital, in any particular branch of industry, if the constant fear hangs over the capitalist that those advantages may be, after he has embarked his capital, suddenly withdrawn, before he can reap the expected profits, or even be remunerated for his outlay. In such a state of uncertainty, he chooses rather to employ his funds temporarily, even at a less profit, until the future holds out more of stability. This is more particularly

true in relation to those benefits which flow incidentally from legislative action, than in those which take the form of a special charter, as in the case of the Ohio bank law. Notwithstanding that law was strictly a party measure, and a strong opposing party threatened repeal as soon as it became a law, yet numerous banks have been started under it; because those banks, thus started, will have a legal existence up to the period designated by the law under which they were authorised, notwithstanding that the repeal of that law may take place, and prevent any new institutions from being formed.

"The stagnation of trade, to which we have alluded, as incident upon a renewed discussion of the tariff question, at the next session of Congress, will doubtless have a marked influence upon the business of the coming fall. There seems to be an attempt making to continue the employment of banks in some sort, as is now the case under the act of June 17, 1844; under which the banks give a required security, and from them the United States deposits cannot be removed without sufficient cause assigned by the secretary, or on their failing to comply with the requisitions in relation to security.

"It has been the experience of the English government and people (and, in matters of finance theirs are operations of a magnitude sufficient to form a guide for the commercial world), that the mere power of expansion in banking institutions, even when the ultimate payment of every individual bill is in nowise jeopardised, has an influence deleterious to commercial and national interests; and, acting upon that experience, the government has positively restricted the banks of the whole kingdom from exceeding a certain amount of paper issues. It is not that there is danger that the Bank of England will fail, and not be able to pay its notes, that government has positively restricted its credit issues to a point as low as 14,000,000*l.*, or 6,000,000*l.* below its usual actual issues; and has prohibited, hereafter, the creation, throughout the United Kingdom, of any bank of issue whatever. It is because the object to be obtained is a steadiness of the currency, and a uniformity of its action as nearly as can be ascertained, in all the channels of business. The power of increasing or diminishing the volume of the currency at will, is the power of altering the value of all property and of all prices, as well as of raising prices in one branch of trade, and of lowering them in another, by withdrawing funds from one quarter, and putting them out in another. This involves an aggregate loss to the community of far greater magnitude than that incurred by the occasional failure of an isolated bank, in the payment of its notes. Hence, although the Bank of England continues to be the recipient of the deposits of the government, as those deposits are payable promptly out again, for government uses, a small portion of them, only, can be re-loaned by the bank. It has no power of multiplying them by the issues of its own notes, in a proportion greater than the sum of the deposits it holds. In the United States, if the banks were banks of discount and deposit, only, the use of them by the government, as depositories, would not involve any serious changes in the channels of employment, for any considerable sums of money. As the case stands, however, the receipt of the public money gives to the government bank the means by which it extracts specie from the debtor institutions. It then has it in its power to multiply that specie by three, in its loan transactions. Thus, extensive curtailments take place within the circle of the debtor banks, and an equally large expansion around the government depository. The effect of this is to disturb the channels in which the capital of the country is usually employed; and by so doing, to produce great evils. In general estimation, the effect of making the public dues payable in specie, only, is to produce a decline in general prices. This is, no doubt, the legitimate effect of such a measure, if put in operation at a time when a level of prices exists, and which has resulted from a superabundance of credits, based upon the specie called into action by the government demands. Such cannot, however, be the effect when prices are low, and are uninfluenced by the presence of any considerable portion of outstanding credits.

"In England, and on the continent, the consumption of raw produce of all kinds, is vastly in excess of what has been the case for a series of years; and although the crops are so prolific as to afford unusual supplies, there are indications of advancing

prices, consequent upon increased consumption. This latter the present policy of the British government is avowedly de recent announcement of the premier was to the effect that it pectation. The enhanced consumption of raw produce in E rences, best calculated to promote the interests of the Unit the over-supplied markets here that surplus, during the prese rise healthy. It is obviously the case, that the wealth of quantity of the products of the earth, and of industry, that That government, therefore, confers the greatest benefits u the labour of each individual to procure for him the great and comforts."—*Hunt's Commercial Chronicle*.

#### THE SUFFOLK BANK, BOSTON.

The system of this bank, which has a capital of 1, half of an association of banks in Boston, to receive New England states, which shall deposit in specie in th sum on which no interest shall be allowed, and before days' notice shall be given. Its purpose is, in fact, to a negotiate at Boston the bills of the several New Englar arise from the use of the deposits,—while other banks j

Redeemed to July 1, 1845 .....					7,717,611
New York state debt, July, 1845 .....					19,790,514

<sup>41</sup> This is the direct debt of the state. There are, in addition, some 5,500,000 dollars New York stock issued in railroad and canal companies, some of which the state is already burdened with. It will be observed that the terms on which New York has been able to borrow money, have varied greatly during the twenty-eight years since she first

became a borrower. In the years 1830—1833, she obtained per cent premium for regular issues of five per cent stock, two an enormous price for stocks, in this country, naturally lecture ; and, like all other business, it was overdone. Since the 230,000,000 dollars of public stock, state and city, has taken stances, it is to be expected that the price of stocks would not be taken into account, that prices of all commodities are low, proportion the number of enterprises demanding extraordinary capital would naturally follow that money would seek stocks for in than in those years, when a speculative feeling, pervading all a demand for capital, even in the smallest channels of business operations, apart from the regular business of the operator. speculation in the New England states has gone on to a such nothing in it of that wildness that marked bank speculation ; all, the amount of capital to be expended in the projected railroad states is small, compared to the actual wealth of that object to which it is to be applied, and the sources whence the roads projected, are nearly all well located. It is true that, are laid out ; but they are in sections of the country dense important interests. The legislature of Connecticut has granted a important link in connecting the great New England web of New York. We allude to the Hartford and Danbury railroad running ford, to strike the New York line at or near the boundary of counties. The capital is fixed at 2,000,000 dollars. The and most wealthy manufacturing towns of Connecticut, formerly lem, the means of communication between New York city and This, with the Erie and Harlem roads, will require 10,000, and the eastern roads may require 15,000,000 dollars, in a that Boston will require for her water-works. The whole not 30,000,000 dollars, to be expended in two or three years. The operation far different in its results from that of investing largely with the credits of those concerns, are loaned out to speculative undertakings, that leave no valuable equivalent for the output this country, the construction of a railroad establishes a must constantly be enhanced, as the country progresses in population.

Vermont .....	ditto	Recovery in an action, with costs.
Massachusetts .....	ditto	Forfeit of three-fold the usury.
Rhode Island .....	ditto	Forfeit of the usury and interest on the debt.
Connecticut .....	ditto	Forfeit of the whole debt.
New York .....	7 per cent	Usurious contracts void.
New Jersey .....	6 per cent	Forfeit of the whole debt.
Pennsylvania .....	ditto	Ditto ditto.
Delaware .....	ditto	Ditto ditto.
Maryland .....	ditto	On tobacco contracts, eight per cent. Usurious contracts void.
Virginia .....	ditto	Forfeit double the usury taken.
North Carolina .....	ditto	Contracts for usury void, forfeit double the usury.
South Carolina .....	7 per cent	Forfeit of interest, and premium taken, with costs to debtor.
Georgia .....	8 per cent	Forfeit of three times the usury, and contract void.
Alabama .....	ditto	Forfeit of interest and usury.
Mississippi .....	ditto	By contract as high as ten per cent. Usury recoverable in action of debt.
Louisiana .....	5 per cent	Bank interest, six per cent; conventional, as high as ten per cent; beyond, contract void.
Tennessee .....	6 per cent	Usurious contracts void.
Kentucky .....	ditto	Usury may be recovered, with costs.
Ohio .....	ditto	Usurious contracts void.
Indiana .....	ditto	On written agreement may go as high as ten per cent; penalty of usury, a fine of double the excess.
Illinois .....	ditto	Three-fold amount of the whole interest.
Missouri .....	ditto	By agreement as high as ten per cent. If beyond, forfeit of whole interest due, and of the usury taken.
Michigan .....	7 per cent	Forfeit of the usury taken, and one-fourth the debt.
Arkansas .....	6 per cent	By agreement, any rate not exceeding ten per cent. Amount of usury recoverable, but contracts void.
District of Columbia...	ditto	Usurious contracts void.
Florida .....	8 per cent	Forfeit of interest and excess, in case of usury.
Wisconsin .....	7 per cent	By agreement not exceeding twelve per cent. Forfeit treble the excess.
Iowa .....	ditto	By agreement as high as twelve per cent. Forfeit treble the excess.

\*.\* On debts or judgments in favour of the United States, interest is computed at the rate of six per cent per annum.

## DAMAGES ON PROTESTED BILLS OF EXCHANGE.\*

The laws and usages of the states vary essentially on the subject of damages on protested bills. In some cases, the regulations of states approximate to each other, while in others, they are widely different. In some cases, the law or rule is unlike, but the result is nearly similar; while, between other states, the result varies from four and a half to fifteen per cent.

In *Massachusetts*, the usage was to recover the amount of the protested bill at the par of exchange, and interest, as in England, from the time payment of the dishonoured bill was demanded

\* Chiefly from the fourth edition of Chancellor Kent's Commentaries.

of the drawee, and the charges of the protest, and ten per cent damage. But this rule has been changed by statute, in 1825, 1835, indorsed in that state, and payable without the limits of the United non-acceptance or non-payment, are now settled at the current rate five per cent damages; and, if the bill be drawn upon any place be twenty per cent damages. The rate of damages in Massachusetts, the state, and drawn or indorsed within the state, and duly protest payment, is two per cent in addition to the contents of the bill, wit in any other New England state, or New York; and three per cent Pennsylvania, Delaware, and Maryland; and four per cent, if p Columbia, North Carolina, South Carolina, or Georgia; and five p of the United States, or the territories thereof.

*Maine.*—Payable out of the state, and in New Hampshire, V Island, Connecticut, or New York, three per cent; in New Jersey, land, Virginia, or District of Columbia, five per cent; in North Georgia, six per cent; at any other place in the United States o any place out of the United States or territories, ten per cent; p less than seventy-five miles distance, in sums of 100 dollars and ove

*New Hampshire.*—[In this state there is no statute regulati practice has been to charge the rate of damages existing at the poi

*Vermont.*—[No statute regulation. The practice has been simi

*Rhode Island.*—Payable without the United States, ten per cen and out of Rhode Island, five per cent.

*Connecticut.*—The rule of damages on bills returned proteste New York, is two per cent upon the principal sum specified in the mont, Maine, Massachusetts, Rhode Island, New York (city of I sey, Pennsylvania, Delaware, Maryland, Virginia, or territory of North Carolina, South Carolina, Ohio, or Georgia, five per cent; States, eight per cent upon such principal sum, and to be in lieu c and without any reference to the rate of exchange.

*New York.*—The rate of damages on bills drawn and payable other parts of North America, was, in 1819, regulated in New Yc fixed at five, or seven and a half, or ten per cent, according to the di on which the bill was drawn. But, by the new revised statutes, w 1st of January, 1830, the damages on bills, foreign and inland, w extensive regulation. They provide, that, upon bills drawn or ne any person, at any place within the six states east of New York, c Ohio, Delaware, Maryland, Virginia, or the District of Columbia, paid, upon the usual protest for non-acceptance or non-payment, t chaser thereof, or of some interest therein, for a valuable considerati the principal sum specified in the bill; and upon any person at North Carolina, South Carolina, Georgia, Kentucky, and Tennessee person in any other state or territory of the United States, or at ar this continent, and north of the equator, or in any British or fore dies, or elsewhere in the Western Atlantic ocean, or in Europe, ten be in lieu of interest, charges of protest, and all other charges incur of, giving notice of non-acceptance or non-payment. But the he and recover interest upon the aggregate amount of the principal su damages, from the time of notice of the protest for non-accepta protest for non-payment. If the contents of the bill be expressed United States, the amount due thereon, and the damages allowed ascertained and determined, without reference to the rate of excha end the place on which the bill is drawn. But, if the contents of ney of account, or currency of any foreign country, then the amoun is to be ascertained and determined by the rate of exchange, or the at the time of the demand of payment.

*New Jersey.*—[There are no statute regulations on this subject

In *Pennsylvania*, the rule, for a century past, was twenty per change; but by statute, in 1821, five per cent damages were allo person in any other of the United States, except Louisiana; if on North America, except the north-west coast and Mexico, ten per c Main, or the islands on the coast of Africa, fifteen per cent; and bills on Europe, and twenty-five per cent upon other foreign bill the protest, and the amount of the bill is to be ascertained and change

*Delaware.*—Payable at any place within the United States, or territories, out of Delaware, five per cent; at any place in Europe, twenty per cent.

In *Maryland*, the rule, by statute, is payable without the state, and at any place in the United States, or territories thereof, eight per cent; in any foreign country, fifteen per cent. And the amount of the bill ascertained at the current rate of exchange, or the rate requisite to purchase a good bill of the same time of payment, upon the same place.

*Virginia.*—Payable out of the state, at any place within the United States, or territories, three per cent; in any foreign country, fifteen per cent.

In *North Carolina*, by statute, in 1828, damages on protested bills, drawn or indorsed in that state, and payable in any other part of the United States, except Louisiana, are six per cent; payable in any other part of North America, except the West India islands, ten per cent; payable in South America, the African islands, or Europe, fifteen per cent; and payable elsewhere, twenty per cent.

*South Carolina.*—Payable within the United States, at any place out of South Carolina, ten per cent; in any other part of North America, or the West India islands, twelve and a half per cent; in any other part of the world, fifteen per cent.

*Georgia.*—The damages in Georgia, by statute, in 1827, on bills drawn on a person in another state, and protested for non-payment, are five per cent; and on foreign bills, protested for non-payment, are ten per cent, together with the usual expenses and interest, and the principal to be settled at the current rate of exchange.

*Alabama.*—The damages on bills, drawn in the state of Alabama, on any person resident within the state, are ten per cent; and on any person out of it, and within the United States, are fifteen per cent; and on persons out of the United States, twenty per cent on the sum drawn for, together with incidental charges and interest.

In *Louisiana*, in 1838, the rate of damages, upon the protest for non-acceptance or non-payment of bills of exchange, drawn on, and payable in foreign countries, was declared by statute to be ten per cent; and in any other state in the United States, five per cent, together with interest on the aggregate amount of principal and damages. On protested bills, drawn and payable within the United States, the damages include all charges, such as premiums, and expenses, and interest on those damages, but nothing for the difference of exchange.

In *Mississippi*, the damages on inland bills, protested for non-payment, are five per cent; if drawn on any person resident out of the United States, ten per cent.

The damages in *Tennessee*, by statute, in 1830, on protested bills, over and above the principal sum, and charges of protest, and interest on the principal sum, damages, and charge of protest from the time of notice, are three per cent on the principal sum, if the bill be drawn upon any person in the United States; and fifteen per cent, if upon any person in any other place or state in North America, bordering on the Gulf of Mexico, or in the West Indies; and twenty per cent, if upon a person in any other part of the world. These damages are in lieu of interest and all other charges, except the charges of protest, to the time of notice of the protest, and demand of payment.

*Kentucky.*—On foreign bills, ten per cent, damages are allowed. On inland bills, damages are governed by the law of the place.

*Ohio.*—Payable at any place without the United States, twelve per cent; within the United States, at any place out of Ohio, six per cent.

*Indiana.*—Payable at any place without the United States, ten per cent; at any place within the United States, out of Indiana, five per cent. Drawer or indorser not liable for damages, if paid at maturity, with costs.

*Illinois.*—Payable at any place without the United States, ten per cent; at any point within the United States, and out of Illinois, five per cent.

*Missouri.*—Payable at any place within the state, four per cent; out of the state, and within the United States, ten per cent; at any place out of the United States, or territories, twenty per cent.

*Michigan.*—[No statute regulation has as yet been adopted in this state.]

*Arkansas.*—Payable at any place within the state, two per cent; in Alabama, Louisiana, Mississippi, Tennessee, Kentucky, Ohio, Indiana, Illinois, Missouri, or at any place on the Ohio river, four per cent; in any other place in the United States, or territories, five per cent; at any place out of the United States, ten per cent; together with costs and interest at the rate of ten per cent per annum.

*Florida.*—Same as the state of Alabama.

*Wisconsin.*—Payable at any place without the United States, twenty per cent; out of the territory, adjoining the same within the United States, five per cent; in the United States, not adjoining the territory, ten per cent.

*Iowa.*—The same as in the territory of Wisconsin

*District of Columbia.*—[The rates established in Maryland and Virginia, are charged on protested bills in the district.]

## CHAPTER XXXIV.

## MONEYS, WEIGHTS, AND MEASURES, OF THE UNITED STATES OF AMERICA.

THE decimal system was adopted by Congress in the subdivision of moneys but not as respects weights and measures.

The power of regulating the standard of the latter was vested in the federal government, which acted upon this authority, first, in regard to the custom-house duties, and afterwards generally; but not until it was found that the weights and measures of Massachusetts had become inaccurate, and that the weights and measures differed in one state from those of another.

In 1836, a law was passed for regulating the weights and measures of the union. This law directed the secretary of the treasury to construct and supply standards of weights, of length, and of capacity of the United States, to the executives of the different states of the union, the governors of territories, and the custom-houses.

The report of Mr. John Quincy Adams, upon weights and measures in the year 1821, was acted upon, in most of its details, as much as if the law had been passed at the time the report was made. Mr. Adams gave the preference to the standards of Great Britain over those of France, from the circumstance that they were generally in use in the United States, and on the ground that a great change in weights and measures similar to that introduced in France, of the same decimal principle, would have been attended with great embarrassment.

The troy weight of England was adopted for weighing bullion.

The avoirdupois weight of England for weighing all other articles bought or sold by weight.

The British and the American statute acre, square yard, square foot, and inch are the same.

The linear measures of England, that is the mile, yard, foot, and inch, are the same in America.

England has, however, altered her corn and liquid measures, while America retains the old English wine gallon for liquids, and the Winchester bushel for corn, &c.

**MONEYS.**—It is remarkable that computations in old depreciated currencies should have, in ordinary transactions, continued to prevail. The dollar in the Massachusetts states has been long valued at six shillings; in New York and North Carolina at eight shillings, varying also in almost every other state. The legal moneys are, however, gold eagles, silver dollars, and copper cents. (*See Mint of United States* hereafter.) Coins of foreign countries, many of them old and

much worn, are found in most towns. Into New Orleans, Mexican, South American, and Spanish dollars, and Spanish Mexican and South American gold have always flown in. This has been the case in regard to many other towns. Accounts are kept in dollars and cents. The exchanges with foreign countries fluctuate. The following tables will show the valuations and exchanges.

## MONEY TABLES.

A TABLE of Gold Coins, the exact Weight, the Assay, and the present Value in the United States, according to the Gold Coin Bill passed by Congress during their session in 1833-4.

To reduce Dollars to Pounds Sterling.—From one-fourth of the number, and the remainder will be pounds, and the decimals of a pound.

Example.—Required the value 444.44 dollars in pounds sterling.

One-fourth equal to 111.11  
10 per cent equal to 11.11

£100.00 Answer.

Note.—The value of British silver shilling in the United States is 22 cents.

The following foreign coins, when of the required in the United States, at the following rates:—

## GOLD COINS.

- 1 Those of Great Britain, Portugal, and Brazil, of 22 carats fineness, at ..
- 2 Those of France, 9-10 fine .....
- 3 Those of Spain, Mexico, and Columbia, of the fineness of 20 carats 3 7-10 fine .....

## SILVER COINS.

- 1 Dollars of Mexico, Peru, Chili, and Central America, and those restamped 415 grains, and of the fineness of 10 ounces 15 pennyweights of pound .....
- 2 Five-franc pieces of France, of the fineness of 10 ounces 16 pennyweights and weighing 384 grains .....

Pro forma accounts of shipments of Mexican dollars to France and England, calculated by Mr. J. F. Entz, of the New York Life Insurance and Trust Company:—

PRO FORMA Account of a Shipment of Mexican dollars from New York to London.

20,000 dollars purchased at 1½ per cent premium.....	dollars.	20,350 00
Cost of 4 barrels, packing charges, cartage, &c. ....	10 75	
Insurance, at ½ per cent, on 20,350 dollars .....	dollars.	101 75
Policy .....	1 25	
		103 00
Total cost in New York .....		20,453 75
The same 20,000 dollars, weighing 17,320 ounces, and sold at 4s. 10½d. per ounce...	£ s. d.	4,194 13 10
Charges—Freight per packet, ½ per cent .....	£ s. d.	10 8 4
Primage, 5 per cent.....	10 3	
Landing charges, postages, &c.....	1 5 0	
Brokerage, ½ per cent.....	5 4 10	
Commission, ½ per cent .....	20 19 6	
		26 8 10
Not proceeds, cash.....		4,156 5 0
Add interest of about 45 days, at 4 per cent, until the draft drawn against the shipment becomes due .....		20 15 7
Total .....		4,177 0 7

This amount, drawn at 60 days' sight, to realise the above 20,463 dollars, 75 cents the rate of exchange would have to be 110 23-100 per cent; which shows that the shipment would not be profitable, unless at least 110½ per cent could be obtained for the draft. Without commission in London, the rate would be 109.67.6, or about 55-100 less.

The following is a table by which the rate of exchange may be ascertained, at any given price for silver, in London:

EXCHANGE TABLES.

Exchange tables between London and the United States, and remittances to London from Paris, Hamburg, and Amsterdam, calculated at various rates from minimum to maximum of exchange.

PARIS Remittances to London for Negotiation, compared with a Direct Remittance at Sixty Days' Sight, exclusive of Commission.

59	106.73	107.26	107.79	108.33	108.86	109.39	109.	

*Example.*—Mexican dollars costing 1½ per cent premium, and sold in London at an exchange of 409.96.

The intermediate prices for dollars are found by taken the difference as follows:  
Dollars, at 1½ per cent, and 56 pence ..... 1 per ct  
1½

Difference.....

One half of this, or 27½, added to 108.65, equal to 109.92.

**PRO FORMA Account of a Shipment of Mexican Dollars from New York to Paris.**

20,000 dollars, purchased at 1½ per cent premium .....	dollars.	20,350 00
Cost of 4 barrels, packing charges, &c.....		10 75
	dollars.	
Insurance, at ½ per cent, on 20,330 .....	101 75	
Policy ... ..	1 25	
		103 00
Total cost in New York.....		20,463 75
The same 20,000 dollars sold in Paris at 5.34 francs .....	francs.	106,800 00
Charges in Havre—Import duty and permits.....	francs.	
"    Cartage, cooerage, postages, &c.....	12 40	
"    Freight, ½ per cent on 20,000 dollars .....	50	
"    Primage, 10 per cent.....	6	
	55	
At 5.25 francs.....	288 75	
Charges in Paris—Freight .....	114 50	
"    Viewing and delivering.....	6 50	
"    Brokerage, ½ per cent.....	123 50	
"    Commission, ½ per cent .....	524 00	
		1,109 75
Net proceeds, cash.....		105,690 25
Add interest of about 45 days, at 4 per cent, until the draft drawn against the shipment becomes due .....		875 43
Total.....		106,565 70

This amount, drawn so as to realise the above 20,463 dollars 75 cents, the rate of exchange would have to be 5.19; which shows that, unless this rate could be obtained for the draft, the shipment would not answer. Without commission in Paris, the result would be 5.21.6, or half per cent more. The steamers charge three-eighths per cent freight, but the additional expense is nearly compensated by the interest of about 15 days, thereby gained.

**TABLE** showing the Rate of Exchange on Paris, realised by a Shipment of Spanish, Mexican, or other Dollars, from New York to Paris.

[illegible]

<i>Exemple.</i> —Mexican dollars costing 1½ per cent, sold at 5.26 francs, will allow to draw at .....	francs. 5.22½

## CHAPTER XXXV.

### MINT OF THE UNITED STATES

THE earliest metallic currency of each colony con  
of the mother country. In Massachusetts, however  
settlements), specie was so scarce, that for many yea  
taxes, and to carry on internal trade, by transferring at  
and the products of the soil.\* Various considerations  
venience and uncertainty of such a medium, induced  
in 1652, to establish a mint. The law enacted for that  
coinage of shillings, sixpences, and threepences, to be  
silver (925 thousandths), and by a reduction of weigh  
shilling of less valew than the English coyne.”† This  
with much opposition from the British crown, whose  
to have been invaded by its operations; but it continu  
thirty years, during which time a considerable amount c  
coins are now extremely scarce, and indeed are not

See Felt's "Historical Account of the Massachusetts Curren  
much interesting and valuable information.

† The mint indenture, or contract, required that the shilling s  
and the smaller pieces in proportion. As the English shilling of  
grains, there appears an unaccountable miscalculation. An aban  
would have made seventy-seven grains and a half.

cabinets of the curious. The shilling only of this mint is known; the best specimens of which, at this day, weigh from sixty-four to sixty-seven grains, and by a recent assay is proved to be 926 thousandths fine; the intrinsic value, therefore, was about sixteen cents and two-thirds. They are a rude kind of coinage, very thin, and of various diameters; and there is some variety in the impressions; but the date of 1652 appears on all of them. The device of a *pine-tree* on one side, has given to the series the common designation of the "pine-tree coinage." They were taken in England at a discount of one-fourth of their colonial value.

In Maryland, silver and copper coins were issued in 1662. These pieces were to be equivalent to the British, but in reality were not much heavier than the shillings coined at Boston.

These were the only silver moneys coined previous to the American revolution. There were various pieces of copper coined at different periods; as, in 1694, the halfpenny for the Carolinas, a twopenny-piece and penny in 1723, another penny in 1733, and a halfpenny for Virginia in 1773. After the revolution, and before the establishment of the national mint, there were various issues of silver and copper, by states, and by individuals.

As the population and trade of the colonies increased, foreign gold and silver coins found their way into the country, and became a part of the circulating medium. These were chiefly the guinea, the joe and half-joe, the doubloon and pistole, in gold; the dollar, the pistareen, and the British shilling and sixpence, in silver. French crowns were not known until the revolution, when they became common. Of the specie currency, the Spanish American dollar, formed the chief circulation, and it became the effective standard, or unit, of the money of the republic.

The pound of the colonies was at first the same as the pound sterling of England, being simply a money of account. This rate, in process of time, became greatly altered, in consequence of excessive issues of paper by the colonial authorities; but, as these issues were greater in some of the colonies than in others, the proportion was both unequal and complicated. The following were the rates of the colonial pounds, in sterling pounds and Spanish dollars, after the revolution:—

NAMES.	New England and Virginia.	New York and North Carolina.	Middle States.	South Carolina and Georgia.
Pound sterling.....	£ s. d. 1 6 8	£ s. d. 1 15 6½	£ s. d. 1 13 4	£ s. d. 1 0 88.9
Spanish dollar.....	0 6 0	0 8 0	0 7 6	0 4 8

When peace was concluded, Congress directed the financier of the confederation, Robert Morris, to lay before them his views upon the subject of coins and currency. The report was presented early in 1782, and is stated by Mr. Jefferson to have been the work of the assistant financier, Gouverneur Morris.

**Ten dollars one *crown*.\***

\* This last coin was to be of gold. He apologised for introducing a country where that emblem had lost favour, by stating that his was the representation of an Indian, with a bow in his left hand, and his right foot on a crown.—*Spark's Life of Gouverneur Morris*, i.

A golden piece of the value of ten dollars.

A dollar in silver.

A tenth of a dollar, also in silver.

A hundredth of a dollar, in copper.

The assistant financier conceded something to Mr. Jefferson's views, but adhered to the main principles of his own scheme. But Congress, in 1785, adopted Mr. Jefferson's report, and in the following year made legal provision for a coinage upon that basis.\*

All these proceedings were, of course, under the *Confederation*, which lasted from 1778 to 1787. An article in that compact provided as follows: "The United States, in Congress assembled, shall have the sole and exclusive right and power of regulating the alloy and value of coin struck by their own authority, or by that of the respective states." Some of the states issued copper coins during that period. How long they continued current cannot be stated; but at this day those of them that remain are in the custody of coin-collectors. The cent of Massachusetts varies in weight from 148 to 164 grains; the New Jersey piece, 128 to 154 grains; the Connecticut coin is the most irregular, varying from 96 to 144 grains. The Vermont cent, of 1786, weighs about 110 grains. There are also other varieties, particularly the "Nova Constellatio," of thirteen stars, and another piece with the same significant number of *rings*, conjoined, both of which were coined in Massachusetts.†

The constitution of 1787 vested the right of coinage solely in the general government. The establishment of a mint was, however, still delayed. In the report on moneys, weights, and measures, made to Congress, in 1790, by Mr. Jefferson, then secretary of state, it was remarked: "The experiment made by Congress, in 1786, by declaring that there should be one money of account and payment through the United States, and that its parts and multiples should be in a decimal ratio, has obtained such general approbation, both at home and

\* The interest taken in this subject by General Washington, and his approval of Mr. Jefferson's plan, appear by the following passage in a letter to Mr. Grayson, member of Congress:—

"I thank you for the several articles of intelligence contained in your letter, and for the propositions respecting a coinage of gold, silver, and copper; a measure which, in my opinion, has become indispensably necessary. Mr. Jefferson's ideas upon this subject are plain and simple: well adapted, I think, to the nature of the case, as he has exemplified it by the plan. Without a coinage, or unless some stop can be put to the cutting and clipping of money, our dollars, pistareens, &c., will be converted, as Teague says, into *five* quarters; and a man must travel with a pair of scales in his pocket, or run the risk of receiving gold at one-fourth less by weight than it counts." (*Writings of Washington*, edited by Sparks, ix. 125.)

The illustrious father of his country took a lively interest in the national coinage. The mint was repeatedly noticed in his messages to Congress. (See Sparks, xii. 25, 32, 53, 63.) It was his practice, whilst president, to visit the institution frequently; the seat of government being then at Philadelphia.

† In this place it may be proper to notice a coinage of silver, bearing the name of "J. Chalmers, Annapolis," and dated 1783. The specimens reserved in the collection at the mint, are a shilling, sixpence, and threepence, weighing 57, 27, and ten grains respectively; of course very carelessly proportioned.

abroad, that nothing seems wanting but the actual cordant pounds, shilling, pence, and farthings of the establish in their stead the new denominations."

On the 2nd of April, 1792, a code of laws was enacted and regulation of the mint, under which, with slight was executed for forty-two years.

The denominations of coin, with their rates, were as

**GOLD.** The eagle of ten dollars, to weigh 270 grains in proportion; all of the fineness of 22 carats, or 917 thousandths.

**SILVER.** The dollar of 100 cents, to weigh 416 grains, tenth or dime, and twentieth or half-dime, in proportion parts in 1664,\* or 892·4 thousandths.

**COPPER.** The cent, to weigh 264 grains; the half

Since the act of 1792, the following alterations have been made :—

On the 14th of January, 1793, the weight of the eagle was 270 grains; the half cent in proportion.†

January 26th, 1796. President Washington issued a proclamation (having been empowered to do by law,) that, "on account of the copper, and the expence of coinage," the cent would weigh 168 grains, and the half-cent in proportion. The standard remained at this standard.

June 28th, 1834. An act was passed, changing the weight of the gold coins, and the relative value of gold to silver. In making these alterations, it may be proper to observe, that the estimate of the value of gold is fifteen times as much as silver, which was the original estimate at the market value; which, although always fluctuating, is on a general average. The effect of the legal estimate of the value of the coinage of gold, and to restrain its circulation; but the coin was immediately exported to Europe, in the form of gold, and quickly wrought into other shapes.

In June, 1834, the weight of the eagle was reduced to 232 grains (in proportion), of which 232 grains must be fine

\* This was an arithmetical nicety, deduced from a weight of 416 grains of fine metal; this being considered the average contents of a Spanish dollar, which is erroneous, and makes our dollar of a little less value; the effect of this upon our national coinage, as the difference, though not appreciable in small sums, is considerable upon recoinage in large sums. See letter of Dr. A. A. Phelps to a select committee of Congress, in 1832.

† The mint was not fully in operation until January, 1795. It was engaged in experimenting; hence the variety of specimens, in silver and copper, which are now so much in request among the virtuosi. The Washington cent.

21 carats  $2\frac{1}{4}$  car. grains, or  $899\frac{188}{1000}$ . This was an increase of  $6\frac{81}{1000}$  per cent on the former value of gold. The silver coinage was not changed.

The standard of nine-tenths fine, as adopted in France and some other countries, was obviously the most simple, and upon every consideration, the most suitable. To bring the silver coins to that proportion, without changing the amount of fine silver in them, it was only necessary to put less copper, by three grains and a half, in the dollar, reducing its weight to  $412\frac{1}{2}$  grains. The weight of the gold was not to be changed, but the fineness increased about three-fourths of one-thousandth, a difference far within the scope of the legal allowance, and hardly appreciable. These proportions were incorporated in a consolidated code of Mint Laws, enacted by Congress, in January, 1837. By that act, the eagle is to be 900-thousandths fine, and to weigh 258 grains; the half and quarter in proportion; and the dollar, at the same fineness, to weigh  $412\frac{1}{2}$  grains; the parts in proportion.\* The allowed deviation in fineness, for gold, is from 898 to 902; for silver, 897 to 903.†

The following is a recapitulation of the various standards, of the gold and silver coins :—

DATE.	GOLD EAGLE.		SILVER DOLLAR.	
	Weight.	Fineness.	Weight.	Fineness.
Act of April 2, 1792.....	grains. 270	thousandths. 916.7	grains. 416	thousandths. 892.4
Act of June 20, 1834.....	258	899.2		
Act of January, 18, 1837.....	258	900	412.5	900

Until the year 1835, there was but one mint, which was established at Philadelphia. In that year three *branches* of the mint were created by act of Congress. Two of these, for the coinage of gold only, were to be situated at the towns of Charlotte, in North Carolina, and Dahlonega, in Georgia—central points of the gold mining region: The third branch was for both gold and silver, at New Orleans, the commercial emporium of the south-west. These three institutions, which, in the view of the law are not distinct mints, but rather branches of the mint, are respectively managed by superintendents, who are under the control of the director of the chief mint. The branches went into operation in the year 1838. Their coinage is uniform with that of the establishment at Philadelphia, being systematically tested there for approval.

The whole mint establishment, thus constituted, is itself a branch of the treasury department of the general government, and is under the supervision of the secretary of the treasury.

The whole coinage of the United States, during the year 1843, amounts to

\* The relative value, therefore, of silver to gold, is 15.9884 to 1.

† The practical limits here, are, for gold, 899 to 901; silver 898 to 902.

within a small fraction of 12,000,000 dollars, and exceeds, by more than one-half, that of any former year. Of this coinage, more than 8,000,000 dollars is in gold; showing a greater proportion to silver than has heretofore been presented.

The branch mints at Charlotte and Dahlonega, have each coined nearly double the amount which they have reached in any former year, and the New Orleans mint nearly quadruple.

The production of the gold mines of the United States, as indicated by the amount sent to the mints, exceeds that of any former year.

The following is a statement of deposits and coinage at the mint of the United States and branches, for the year ending 31st December, 1843 :—

*Rowan Gold Mines.*—It is stated in the *Salisbury Watchman*, "that there is in Rowan county, North Carolina, the richest gold mine that has yet been discovered in the United States. It is a small vein, from four to twelve inches wide; many bushels of the material taken from it, have overgone 200 dollars to the bushel, and some as high as 500 dollars." It is also stated in the *Mecklenburg Jeffersonian*, "that 11,876 dwts. of gold had been taken from it by seven hands about a month since. As might be expected, in so small a vein, the water soon became unmanageable, and they began again at the surface, and struck a vein parallel to the first, and nearly as rich as that. These veins, as also all those in that region, are believed to increase in richness and size as they descend.

There are six or eight other mines in the same region, and different in many particulars from the other vein r

*Georgia Gold Mines.*—Extract from a letter from member of Congress from that state.

“ Mr. Calhoun’s mine is still doing wonders ; it is the teen days from the time the mine was opened, and e amount deposited and assayed at the mint is 6027 dollars last week, after burning off the quicksilver, and deposited 269  $\frac{15}{100}$  ounces, or 5387 dwts. before melting.

“ A mine was discovered in Cherokee about two months as I am informed by several persons, is one pound of gold p

*Silver Mines in North Carolina.*—The Washingto incorporated by an act of the General Assembly of N 1839, with a capital of 500,000 dollars, divided into : The charter privileges extend to a period of fifty year situated in Davidson county, North Carolina, ten mile

The estate in which the mining establishment is sit sixty buildings have been erected, contains 466 acres, pany in 1840, for 479,500 dollars.

In the descriptive portion of the report of 1842, it : feet level, the yield of the ore, when dressed, was ab and from twenty to 120 ounces of silver to the ton c silver varied from one dollar eighty cents, to two dolla its price being enhanced by the large proportion of g with it at this depth.

At the sixty-foot level, the ore increased in richness value. At its best points, it yielded as much as 5000 general average is stated to be 126 ounces of silver to the sulphuret of lead, or galena, was first met with, in bulk of the ore continued similar to the forty-foot level, with the exception of the proportion of gold, which was recovered again at the 160-foot level.

Arriving at the 100-foot level, the galena predominated; but, in other respects, the mine presented the same aspect as at the 60 feet, increasing in regularity.

At the 160-foot level, the vein is nearly all sulphuret, as regards the lead, and the area is enlarged. It was estimated, that this argentiferous ore, locally termed "the black ore," produced on an average from eighty-seven dollars fifty cents to 100 dollars per ton, in equal proportions as to value of the lead and the silver, after deducting the expenses of smelting. It was at this level that some masses of rich blue galena were met with, worth at the rate of 1000 dollars per ton.

The Washington mine is situated about eighty miles from Raleigh, the capital of the state, and the present terminus of the great chain of railroad from the north. It is also 100 miles from Fayetteville, the head of sloop navigation on Fear river. The cost of transportation from the mine to Philadelphia, has been generally eighty-five cents per 100 lbs., and has not exceeded one dollar.

From the commencement of the mining operations up to November 1, 1842, a period of twenty-seven months, the actual product was 2661 pigs of argentiferous lead, yielding silver and gold to the amount of 13,288 dollars 68 cents, this being the net value, after deducting the charges of the United States mint for separating the gold from the silver, and alloy requisite to reduce it to the standard of coinage.

The litharge necessarily made in obtaining these results, netted the value of 5499 dollars 11 cents, forming an aggregate value of 18,787 dollars 79 cents. The period embraced by this return was one of heavy expense in erecting buildings and machinery, in sinking the engine shaft, in carrying forward the cross-cut, in expensive explorations, and in much costly work, at a total outlay of 29,824 dollars 84 cents.

The new board of superintendents obtained possession on the 13th of October, 1843, and this statement includes from that time up to the 1st instant, during which time the produce of the mine has been in all 40,379 dollars 47 cents, viz. :—

\* Report on the Washington Silver Mine of Davidson County, North Carolina. By Richard C. Taylor. With an Appendix, containing assays of the ores, returns of silver and gold produced, and statements of the affairs of the Washington Mining Company.

## GOLD AND SILVER COINS

The following report has been submitted to the director of the mint, in compliance with a resolution of the committee. It exhibits the fineness and value by weight of silver coins.

## GOLD COINS.

C O U N T R I E S.	Fineness in thousandths.	Value per dwt.	C O U N T
		cents.	
Great Britain, sovereign .....	915.5	94.62	Bolivia, doubloon
France, pieces of 40 and 20 francs .....	899.	92.92	Central America,
Spain, doubloon and parts .....	866.	89.51	La Plata,
Mexico, " .....	866.	89.51	Portugal, johanna
Peru, " .....	868.	89.71	" crown

## SILVER COINS.

C O U N T R I E S.	Fineness in thousandths.	Value per ounce.	C O U N T
		cents.	
Spain, dollar of the Peninsula..	900.	116.36	Peru and North
" pillar dollar of Spanish America .....	898.	116.10	dollar .....
France, crown (ceased to be coined in 1793) .....	909.	117.53	Chili dollar .....
France, five-franc piece .....	900.	116.36	Central America
Mexico, average of various mints, and in the proportion usually presented here .....	897.	115.97	Brazil, testampe reis .....

The value of the gold coins, as ascertained by assay, is less than the legal value as established by the act of June 28, 1834, and will be seen by the following schedule :

C O U N T R I E S.	Value by assay.	Value by law.	C O U N T
	cents.	cents.	
Gold coins of Great Britain .....	94.8	94.62	Great Coins of Sp
" Portugal .....	94.8	94.46	" Me
" Brazil .....	94.8	94.46	" Col
" France .....	93.1	92.92	"

" The general over-valuation of foreign gold coins (see table) arises from two circumstances ; the first is, that the coins in question are not of the legal standard ; an assumption not confirmed by our assay of the fineness of the coins of Great Britain, Portugal, and Brazil (corresponding to 916 1-3 thousandths), whereas our standard is 915 1-2, and the two last but 914 thousandths. A second circumstance originates from the fact, that by the law of January 18, 1834, the standard of gold was raised from 899.225 thousandths to 900, while the pure gold in our coins is held at a somewhat lower standard than it was before. A corresponding change of standard is called for in the legal value given to the pure gold in foreign coins.

" The act of June 28, 1834, is therefore erroneous and should be amended.

greater value upon foreign gold coins than upon our own, and thus misleads the public, and prevents recoinage. It is unnecessary, because the mints of the United States are abundantly sufficient for all the gold coinage required for circulation; and it is inconvenient, because the foreign coins which it makes a legal tender do not correspond in value and denomination with our money of account. I would therefore beg leave, most respectfully, to recommend that the act in question be repealed.

"The Act of June 25, 1834, making Spanish American dollars a legal currency at 100 cents each, and French five-franc pieces at 93 cents each, does not lead to any injustice that I am aware of."

#### COST OF COINAGE AT THE UNITED STATES MINT AND ITS BRANCHES.

Particulars of the cost of coinage at the several mints of the United States, from a report laid before Congress, March 31, 1842:—

The cost of coining 100 pieces at the New Orleans branch mint was, for 1838, 15 dollars 40 cents; for 1839, 2 dollars 99 cents; for 1840, 1 dollar 50 cents; and for 1841, 1 dollar 41 cents.

The cost of coining 100 pieces at the Charlotte branch mint was, for 1838, 72 dollars 18 cents; for 1839, 35 dollars 30 cents; for 1840, 37 dollars 70 cents; and for 1841, 37 dollars 79 cents.

The cost of coining 100 pieces at the Dahlonega branch mint was, for 1838, 67 dollars 4 cents; for 1839, 42 dollars 62 cents; for 1840, 43 dollars 51 cents; and for 1841, 28 dollars 50 cents.

The actual cost of coining 100 dollars' worth at the Philadelphia mint was, for 1838, 1 dollar 52 cents; for 1839, 2 dollars 7 cents; for 1840, 2 dollars 48 cents; and for 1841, 4 dollars 34 cents; the average of the four years being 2 dollars 23 cents.

The cost of coining 100 dollars' worth at the New Orleans branch mint was, for 1838 154 dollars 6 cents; for 1839, 19 dollars 72 cents; for 1840, 5 dollars 68 cents; and for 1841, 8 dollars 12 cents; the average for the last two years—the first two not being a fair criterion of the average cost, being 6 dollars 68 cents.

The cost of coining 100 dollars' worth at the Charlotte branch mint was, for 1838, 17 dollars 82 cents; for 1839, 9 dollars 3 cents; for 1840, 9 dollars 44 cents; and for 1841, 9 dollars 2 cents; the average of the four years being 10 dollars 59 cents, and that of the last three years 9 dollars 15 cents.

The cost of coining 100 dollars' worth at the Dahlonega branch mint was, for 1838, 12 dollars 43 cents; for 1839, 10 dollars 78 cents; for 1840, 9 dollars 32 cents; and for 1841, 6 dollars 6 cents; the average of the four years being 9 dollars 47 cents.

The actual cost of coining 100 dollars' worth at the Philadelphia mint was, for 1838, 1 dollar 52 cents; for 1839, 2 dollars 7 cents; for 1840, 2 dollars 48 cents; and for 1841, 4 dollars 34 cents; the average of the four years being 2 dollars 23 cents.

The cost of coining 100 dollars' worth at the New Orleans branch mint was, for 1838, 154 dollars 6 cents; for 1839, 19 dollars 72 cents; for 1840, 5 dollars 68 cents; and for 1841, 8 dollars 12 cents. The first of these should be excluded, and perhaps the second, as any foundation for a judgment respecting this mint. The average for the last two years was 6 dollars 68 cents.

The cost of coining 100 dollars' worth at the Charlotte branch mint was, for 1838, 17 dollars 82 cents; for 1839, 9 dollars 3 cents; for 1840, 9 dollars 44 cents; and for 1841, 9 dollars 2 cents; the average of the four years being 10 dollars 59 cents, and that of the last three years 9 dollars 15 cents.

The cost of coining 100 dollars' worth at the Dahlonega branch mint was, for 1838, 12 dollars 43 cents; for 1839, 10 dollars 78 cents; for 1840, 9 dollars 32 cents; and for 1841, 6 dollars 6 cents; the average of the four years being 9 dollars 47 cents; and that of the last three 8 dollars 49 cents.

The cost of coining 100 pieces of coin at the Philadelphia mint was, in 1838, 39 cents; for 1839, 67 cents; for 1840, 79 cents; and for 1841, 1 dollar 12 cents; the average for the four years being 64 cents.

The cost of coining 100 pieces at the New Orleans 15 dollars 40 cents ; for 1839, 2 dollars 99 cents ; for 1841, 1 dollar 41 cents.

The cost of coining 100 pieces at the Charlotte branch 18 cents ; for 1839, 35 dollars 30 cents ; for 1840, 37 dollars 37 cents 79 cents.

The cost of coining 100 pieces at the Dahlonega 67 dollars 4 cents ; for 1839, 42 dollars 62 cents ; for 1841, 28 dollars 50 cents.

## CHAPTER XXXVI.

## PUBLIC LANDS IN THE UNITED STATES.

THE public lands, or lands not belonging to individuals or to corporate bodies, were, and continue to be, held, at least administratively, and for sale, as the property of the federal government; but under certain stipulations as bearing on the rights of the respective states, or territories, within which these lands are situated.

The lands lying east of the Mississippi, were, at the close of the revolution, claimed by the several states on the tenure of original colonial charters, which, although general in their terms, extended from sea to sea. At that period, the war had impoverished the coffers, increased the liabilities, and diminished the resources of the United States treasury, and recommendations were accordingly made to the several states, to cede their titles to the western lands in order to aid in the payment of the national debt. In accordance with this recommendation, several of the states ceded their titles to the lands claimed under their original patents.

"The tracts, thus ceded, embrace three separate territories. One of those territories, comprising Ohio, Indiana, Illinois, Michigan, Wisconsin, and Iowa, a tract extending north of the river Ohio and west of Pennsylvania and Virginia, reaching northward to the northern boundary of the United States, and westward to the Mississippi, was originally claimed by Virginia; a state that was in the possession of Vincennes and Kaskaskias, having defended those places during the war of the revolution. Claims to the same territory, were urged by Massachusetts, Connecticut, and New York, which, together with Virginia, ceded to the union their rights to this tract. Georgia ceded to the union its claims to lands lying within the boundaries of the states of Alabama and Mississippi.\* North Carolina and South Carolina ceded their claims to land lying within the state of Tennessee."†

The first tract was denominated the north-western territory. For the government of this territory, an ordinance was framed in 1787. The boundaries of the states within the limits of the territory, were fixed by the fifth article of the ordinance: that instrument providing, at the same time, "that there should be formed therein not less than three, nor more than five states." The ordinance declares that "the legislatures of those districts, or new states, shall never interfere with the primary disposal of the soil by the United States in Congress

\* Report of the Hon. William Cost Johnson, of Maryland, on the public lands, made in the House of Representatives, March 2, 1843.

† The tract in the state of Ohio, known under the name of the Connecticut reserve, was excepted from the cession by Connecticut. This is now the basis of the Connecticut school fund.

assembled, nor with any regulations Congress may find necessary for securing the title in such soil to the *bonâ fide* purchasers;”\* and, also, that “no tax shall be imposed on lands, the property of the United States, and that, in no case non-residents should be taxed higher than residents.” Upon the same subject the constitution of the United States expressly provides, that Congress shall have power to dispose of, and to make all needful rules and regulations respecting the territory or other public property of the United States. The ordinance also prescribes, “that, when the several territories shall have attained a certain amount of population, they shall be admitted into the union upon an equal footing with the original states.”

Louisiana was purchased from France in 1803. From the valuable object to be attained by the possession of the control of the entire navigation of the Mississippi, although without any clear constitutional authority, the sum of 15,000,000 dollars was paid.

The territory of Florida was purchased the 22nd day of February, 1819, by a treaty concluded between Spain and the United States.

STATEMENT respecting the Lands acquired by the United States of North America, under Deeds of Cession, from the States, and from Foreign Nations.

*Territory Northwest of the river Ohio, and East of the Mississippi river, ceded by the States.*

\* South of 31st degree of latitude.

† South of 31st degree of latitude.

‡ Including the whole north-western territory to the Pacific ocean, and the lands west of the states of Missouri and Arkansas.

§ This quantity of 846,295,680 acres includes the quantity of 132,295,680 acres, south of the La Platte river set apart by government for the emigrant Indians. Also, the 7,082,831 acres, in the territory of Iowa proper, ceded to the United States.

NOTE.—In the foregoing tables, the first column contains the quantity of land embraced in the cession; the second the quantity of land sold to September 30, 1841; the third, the quantity of land remaining unsold; the fourth the quantity of land to which the Indian title is extinguished; the fifth, the quantity of land to which the Indian title is unextinguished. The quantities of land put down in the several states and territories, except Ohio and Indiana, as remaining unsold, were necessarily made up, in a great measure, by estimates, as follows:—From the estimated area of the state, the quantity sold, and otherwise disposed of, was deducted, and the remainder treated as land remaining to be sold.

By treaties with the Indian tribes, large tracts of their territories have been ceded to the United States. In respect to the Aborigines on their lands, a writer in the *Mechanics' Magazine* remarks—

“Upon their own soil and among themselves, so far as their rights of person are concerned, the governments of those tribes are considered independent governments. It is true, that the government of the United States has assumed the right of purchasing their land to the exclusion of every other purchaser; but the territory of the Indians has never been offered for sale, by this country, without a fair and full purchase of their title. The first treaty made with them by us, was that of Greenville, in 1795; and as it may be considered a model of subsequent treaties, and may exhibit the tone of our policy regarding them, we would designate its general terms. By this treaty, perpetual peace is established; the Indians acknowledge themselves under the protection of the union, and engage to sell their lands to them only. Certain regulations, to be preserved between the two parties to the treaty, are embodied; and, in return, the United States engage to protect the Indians, to pay them in goods to a certain amount, and to make them certain annual stipulated payments. The relation of the government to the Indian tribes within our borders, is analogous to that of a guardian to a ward, and we trust that our intercourse with them will ever be charged with such responsibilities and duties.”

Upon the public domains which formerly belonged to England, France, and Spain, various claims have been made by individuals to tracts, either by virtue of occupancy, or under the title of grants, made by those governments, before the lands were ceded to the United States. In order to adjust those claims, or rights, commissioners have been appointed by several acts of Congress to examine the validity of those titles or claims, to decide upon them, or to report the facts upon which they are founded, to Congress. Titles derived from legitimate authority, have been confirmed; and claims have also been confirmed upon grounds of equity, although the legal titles had not been perfect.\* In 1787, one

\* Reports of these Land Boards are included in the American State Papers.

million and a half of acres was sold to the Ohio company, by which the state of Ohio was first colonised. Two years afterward, a contract was made with Mr. John Cleves Symmes, for the purchase of a million and a half of acres between the Great and Little Miami; but in consequence of the failure of the payment of the purchase money, the patent conveyed a much smaller tract.

The first act of Congress for the sale of public lands limited the sale to tracts of not less than four thousand acres each. This plan might have been convenient, but it was eminently favourable to land jobbing, by confining the purchase to a few rich persons, while those with small means were excluded from making such purchases from the government, and consequently obliged to pay high prices to the jobbers. In July, 1790, Alexander Hamilton, then secretary of the treasury, brought forward a scheme for the sale of the public lands, which provided—

“ That the tracts set apart to each settler, should not exceed 100 acres ; that the prices of the land sold under special contract, should be thirty cents per acre, payable in gold or silver, or in public securities, computing those bearing an interest of six per cent per annum, the same as gold and silver, and those bearing a future or less interest at a proportionate value. In every instance of credit it was required, that one quarter should be paid down, and independent security be given for the residue, and that all surveys of the land should be made at the expense of the purchaser.”

Another law was passed by Congress in 1800, which facilitated the sale of the public lands, and a report was made in the House of Representatives, on the 23rd of January, 1804, recommending “ a reduction of the size of the tracts offered for sale.

The minimum price for the public land, previous to the year 1800, was two dollars per acre, one-fourth of which was required to be made at the time of the purchase, and the remainder in three annual instalments, a discount of eight per cent being allowed if the purchaser paid in advance. Jobbers continued to purchase land extensively. Many of those jobbers, speculating on credit, were ruined. They were aided by the banks to an extent that was, among other causes, fatal both to the jobbers and to the banks.

The system now adopted for the survey, sale, and distribution of the public land appears, from the report of the commission of the general land office, to combine many facilities to purchasers and settlers. The tracts ordered to be brought into market are first surveyed and divided into townships of six miles square, and subdivided into sections of one square mile, each containing six hundred and forty acres. The lines are run parallel to the cardinal points, and cross each other at right angles, excepting where they are formed by an Indian boundary line, or the course of a stream. The sections are subdivided into quarter, half-quarter, and quarter-quarter sections, the first containing one hundred and sixty acres, the second eighty, and the third forty; their dimensions

being accurately ascertained by fixed rules which are prescribed by law. The survey is performed by two principal surveyors, by whom their deputies are appointed, all being under the direction of the commissioner of the general land office, in Washington. The townships are ranged and numbered, and the sections in each township are also numbered from one to thirty-six. The parallels of surveys are based upon a series of true meridian lines. One principal meridian line is in Ohio, the second in Indiana, the third in Illinois, and the rest in other states, each constituting the parallel of a series of surveys, which divides the whole territory into squares, defined with accuracy in parallel ranges, by "*blazing*" the trees, a process that is performed by cutting with a hatchet the bark and a little of the wood from the sides of their trunks. The precision of these modes of survey prevents disputes regarding boundary lines.

When the lands are surveyed, a land office is established in each district, and on the day named by the President of the United States, a public sale of land takes place, the whole being offered in the market to the highest bidder, above the fixed minimum price of one dollar and a quarter per acre. The tracts remaining unsold, are then offered to the public at private sale, and may be purchased at the land offices at the minimum price. One section in each township that is, one thirty-sixth part of the land, is reserved, perpetually, to maintain common schools within the township. One entire township, comprising 36,000 acres is also reserved in each state and territory, for the maintenance of higher seminaries of education. Five per cent are reserved on the amount of sales in each state, three-fifths of which are required to be expended by Congress in the making of roads through the state, and two-fifths for the diffusion of useful knowledge. All salt springs and lead mines are reserved to the government.

In each district, the duties of the land office are performed by a register and receiver; the register sells the land, and the receiver collects the payments. Each of these officers keeps his own records, performing his functions independent of the other, and holding separate responsibilities. They are each required to keep separate accounts, to make periodical reports to the general land office at Washington, the one of sales, and the other of receipts: each officer being considered as a check upon the other. All tracts are so marked and numbered upon the books of the land offices, that a purchaser may select a tract the register and receiver having only to receive the money and give the vouchers for a title. Each purchaser is then granted an original patent from the government, as the most perfect title to the soil.

QUANTITY of Land granted to each of the States and Territories, and the Purpose for which granted—up to February 7, 1839.

## CHAPTER XXXVII.

### FINANCES OF THE UNITED STATES.

THE federal credit of the United States has been honourably maintained from the commencement of the revolutionary war down to the present period; and we believe that nothing but the certain calamities, which would attend, and be consequent to, a war, will ever disturb the faithful discharge of the fiscal obligations of the federal government.

In Europe a very erroneous estimate, and very unjust conclusions have been entertained, we believe generally from ignorance, by confounding the non-paying and repudiating states, with the revenue, debt, and expenditure of the federal government, and of the states who have honourably, and religiously, discharged their obligations.

The revolutionary war having altogether interrupted the exterior commerce of the country, there was no revenue raised during that period by customs duties; and as Congress had not then the power to levy any general tax, loans and paper-money became the inevitable expedient.

The following passages, which occur in Mr. Henry Lee of Boston's Letters to cotton manufacturers, are worthy of attention.

" War taxes and expenditures—by decreasing the pecuniary means of the great mass of a nation—operate unfavourably on the consumption of commodities.

" The average annual expenditure for the army and navy of Great Britain, from 1801 to 1815, amounted to 344,096,092 dollars, and in one of the last years of the war it came up, including the interest on the war debt, to the enormous sum of 488,558,946 dollars—two-thirds of which was expended for armies mostly engaged in fighting the battles of foreign nations in foreign lands. The war, during every period of its prosecution, was termed a '*successful*,' a '*glorious war*'—to which the most ambitious portion of the nation were reconciled, by the hope of '*national glory*,' or of personal distinction; while the more unreflecting, or the more sordid portion of it were willing or eager for its continuance—upon the supposition of enjoying a monopoly of the commerce and navigation of the world.\* In the latter sentiment, many of the people of this country sympathised, and from similar motives—till, at last, we were drawn into its vortex, by a desire, on the part of the thoughtless, or the ambitious portion of the nation, of adding, also, to our fund of '*national glory*'—and that, we believe, was the only benefit which the promoters and advocates of that gratuitous war ever pretended had been realised—since the questions of impressment and blockade, which were the ostensible causes of the war, were not only left unsettled, but may, perhaps, have not even been subjects of discussion in the negotiations at Ghent for a termination of the war; a war which ended, as most wars have done, with the accomplishment of no better purpose than the gratification of the ambition of its most zealous and leading fomenters—and the gratification of the passions of the people, who were led into a belief that the war would be productive of national advantages—superadded to the gratification of those belligerent feelings which, in this country, as much, if not more than in most countries, are easily excited by the popular favourites of the day. Of that portion of the war-party who may have been prompted by more patriotic motives, and by a sincere expectation of benefiting their country by a war—there was an utter disappointment of their wishes and expectations—and such, in all probability, would have been the issue of the wars in which some of our most popular and influential public men appear to have been desirous, judging by their sentiments, speeches, and conduct, at various periods, of involving the nation.

" A reflection made by Mr. John Q. Adams upon the effects of war with Great Britain, may not be considered as inappropriate in connexion with this subject. The ex-president in a communication before the public, in which reference is made to some of the schemes for improving the currency that were in agitation in 1837, adds; ' I think of this as I thought of the dry-dock, gun-boat, restrictive, anti-navy system of Mr. Jefferson. *It cost the nation a terrible war to be delivered of that, but the nation was effectually cured of its hydrophobia. The war was a drastic purge, but it effectually worked its cure.*'

" Well, most wars originate in *hydrophobia*—in the *madness* of the people—to which they are excited by their rulers, and for no other purpose than the gratification of their selfishness and ambition, and although they terminate with the application of a '*drastic purge*,' or some still more bitter curative, yet there is no security against the returning *madness of the people*—at least not till the great mass of them, through all ranks of society, shall become more enlightened, more moral, more religious—more patriotic—more virtuous—than they now are—or, according to present appearances, are likely to become in this day and generation.

" The last war between the United States and Great Britain, of only two and a half years' continuance, and with but a very inconsiderable portion of the military and naval power of that country brought into action—cost us upwards of 100,000,000 dollars. This sum was not raised by indirect taxation in the form of duties on imported goods—because a war with any great naval power will always, in this country, reduce that branch of business to a very low point. In 1812, we imported 77,030,000 dollars. In the subsequent year of the war, our imports declined to 22,005,000 dollars, and in 1814, to 12,965,000 dollars; while our exports, in 1814, sunk to the insignificant sum of 6,927,441 dollars.

" There must necessarily be an almost entire cessation of revenue from customs in a war with any great naval power, and consequently a substitution of direct taxes—but as direct taxation, to any considerable extent, is one of those functions of government which, in this country, has never yet been exercised, and when exercised to a very limited degree has been resisted in some of the states, and left unpaid in a still greater number of them—the only mode, then, of obtaining the increased amount of funds

\* It is true we prospered during that disastrous period—not, however, from the effects of those wars, but in spite of them. The effects of those wars were, no doubt, injurious to us, though less so than if we had been always a party to them; but there were other causes in operation, which more than counterbalanced the pecuniary evils of those wars, and we prospered, though in a less degree, than we should have done in a time of peace.

*for the prosecution of a war, seeing the disinclination of the nation to direct taxation, is the borrowing at home or abroad. That mode of meeting even our peace expenditure, has been practised upon the past three or four years.*

"Nor was the last war with Great Britain supported by means of direct taxes, for the whole amount received from that source of supply, in 1813, 1814, and 1815, was but 4,385,975 dollars—and that, too, paid in depreciated currencies averaging, perhaps, a discount, on a sound currency, of twenty per cent. In truth, the entire war expenditure was paid out of the proceeds of loans and treasury notes—constituting a debt, at the close of the war, of about 100,000,000 dollars—superadded to its pre-existing amount. These loans were effected on such high rates of interest, and the payments on their account were in such depreciated currencies, as to have cost the country at least twenty-five per cent more than they received—the stocks issued by government having subsequently been paid to their holders in a sound and honest currency of a full standard value. Nevertheless, there were propositions before Congress, and before the country, for issues of governmental paper-money, which, had they been sustained and acted upon, might have reduced the value of the certificates of the public debt to a level with the old '*continental money*'—and had the war been of much longer continuance, it may be reasonably inferred that such would have been the fate of the national creditors.

"Short as the war was, and inconsiderable as were the expenses of conducting it, in comparison with the resources of the country; the credit of the government was so bad, arising from the indisposition of the nation to pay direct taxes—and from a similar unwillingness of our rulers to hazard their popularity in recommending and levying of taxes; that before the war was concluded the government stocks, bearing high rates of interest, were below sixty-five for 100 dollars, and any further issues would probably have sunk them to almost the present level of the stocks of some of the bankrupt states."

The revenue of the United States has, since the war of independence, been chiefly derived from the duties upon articles of foreign produce and manufactures, imported either by American or foreign ships. Tonnage duties have also been levied by the customs. Next to the customs, the greatest source of revenue has been derived from the sale of public domains. Internal or excise taxes have occasionally been imposed, but they were universally considered obnoxious, and were continued only for short periods. Before the year 1802, excise duties were imposed on manufactured snuff, refined sugar, sales at auction, licences to retail wines, and distilled spirits, stamped paper, and on carriages for the conveyance of persons; but these were all repealed in that year. During the late war between the United States and Great Britain, duties on most of these articles were renewed; and duties were, also, imposed on various domestic manufactures. But, soon after the return of peace, all these excise taxes were repealed.

Some additions have been made to the revenue (but deemed small additions) from the Post-office, from taxes on patents, and from dividends on bank stock. Direct taxes have been levied at four different times only, since the revolution. On the 1st of July, 1812, immediately after the declaration of war against Great Britain, 100 per cent was added to all the permanent duties on imports, to continue only during the war; but these were afterwards continued until the 30th of June, 1816.

The power of a nation in modern times, as all admit, depends, materially, as well as politically, chiefly on the amount of unencumbered revenue it can raise, without oppression to the people.

In financial legislation slight burdens may prove incentives to greater industry. Grievous taxation, which may be exacted and even raised for a cer-

tain not definable period, discourages public thrift. War and profligacy by increasing expenditure, if that expenditure be greater than the natural annual revenue, taxes the industry of the existing generation as well as that of one or more succeeding generations. Hence arise generally all the perplexities of finance.

The extreme natural revenue to be derived from taxing a nation should never exceed the sum which can be spared for paying the reasonable expenses of an honestly and wisely administered government,—and for defraying the expense of defending the country against aggression, without deducting a greater sum from the general income yielded by labour, than an amount which leaves the full average means of a wholesome subsistence, comfortable lodging, and adequate clothing for the population.

The extreme natural revenue, and the general wealth of the nation which yields it, will be greater or less in proportion to the number of its inhabitants, in the same ratio that the greater ingenuity and labour, or the greater ignorance and idleness of the population, yields the greater or lesser amount in value of commodities. This amount again will be regulated in the cost of production, by the prices of raw material and food, and the outlay of fixed capital. The value of the produce of labour at home, and in all the markets of the world, will depend upon the power of selling and buying, and upon the natural demand for consumption. The more the interchange of the commodities of any one place is restricted, or obstructed, from the markets of another, the more will the quantity of those commodities, wherever produced, be restricted, and obstructed, in the selling, buying, and consumption. On examining the various customs tariffs passed at different periods by the Congress of the United States, we are forced to declare, that they exhibit an extraordinary absence of that wisdom, sagacity, and sound principles, which, in other respects, distinguish the great legislators of America. On fiscal, as well as commercial principles, the various American tariffs are only worthy of being classed with the illiberal barbarisms, and fallacies, which have disgraced the worst legislation of European nations. We will endeavour to prove this under a separate head: and in the mean time only remark, that the only defence, a very inexcusable one it is true, that can be made on the part of America, is, that the latter followed the very bad example persevered in by England.

The following tabular statements, compiled from official returns, will serve to illustrate the financial administration of the United States.\*

The following estimate was made out by Mr. Nourse, the registrar of the treasury, in 1790.

\* See also the organisation of the treasury, under the head of the "Civil Department of Government."

" General Abstract of the Annual Estimates, and Amount of the Expenditures and Advances, at the Treasury.

## REVENUE FROM THE SALE OF PUBLIC LANDS.

Under the head of Public Lands of the United States, Tabular Statement of Revenue derived from Sales will be found.

POST OFFICE.—See Post Office of United States for Revenue derived from

## DIRECT TAXES.

Although direct taxes are levied under laws passed by the legislatures of particular states (which see), direct taxation has always been considered odious when levied by the general government. The following statements are chiefly on the authority of Mr. Pitkin. "By the Constitution," he observes, "direct taxes, when laid, are to be apportioned among the states in the same manner as representatives, including three-fifths of the slave population. This part of the Constitution was a compromise between the slave-holding and non slave-holding states; the former, agreeing to pay direct taxes, according to the ratio of their representation. Notwithstanding this, four direct taxes only have been laid from the commencement of the government—the slave-holding states, therefore, have enjoyed the benefits of this compromise without feeling much of its burdens.

"The first direct tax was imposed July 14th, 1798, being 2,000,000 dollars, and was apportioned agreeable to the constitution. It was laid upon all dwelling houses, and lands, and on slaves between the ages of twelve and fifty, in the following manner, viz. :—

"Upon every dwelling-house, which, with the out-houses, appurtenant thereto, and the land whereon the same was erected, not exceeding two acres, shall not be valued at more than 100 dollars, and not more 500 dollars, a sum equal to one-tenth of one per cent on the amount of valuation.

At more than 500 dollars, and not more than 1,000 dollars, three tenths of one per cent.

do. 1,000	do. do.	3,000	do. four tenths of	do.
do. 3,000	do. do.	6,000	do. five tenths of	do.
do. 6,000	do. do.	10,000	do. six tenths of	do.
do. 10,000	do. do.	15,000	do. seven tenths of	do.
do. 15,000	do. do.	20,000	do. eight tenths of	do.
do. 30,000	do. do.	30,000	do. nine tenths of	do.

And on all dwelling-houses, valued at more than 30,000 dollars, one per cent.

"Upon every slave enumerated (and such as 'from fixed infirmity or bodily disability were incapable of labour,' were not to be enumerated) there was assessed fifty cents.

"After deducting the sums thus assessed upon dwelling-houses and slaves, within each state, from the sum apportioned to such state, the remainder was assessed upon the lands in such state, according to the valuation made, in pursuance of law, and at such ratio per centum as should be sufficient to produce the said remainder.

	Value. dollars.
"The number of acres of land in the United States, then valued, was . . . . .	163,746,688 479,293,263
"The number of dwelling-houses over 100 dollars was . . . . .	276,695 140,683,984
"Making for both . . . . .	619,977,247
"The number of slaves enumerated was 393,219.	
"The proportion of the two millions assessed upon houses was . . . . .	471,988
"Upon lands . . . . .	1,327,713
"Upon slaves . . . . .	196,609

"The second direct tax was laid the 2nd of August, 1813, being 3,000,000 dollars, and was apportioned among the states on the census of 1810; and the sums thus apportioned were divided to each county in the state.

"A difference in the value of lands and houses in different counties produced a great inequality in the sums paid by individuals in the same state, though possessed of lands

valued alike; and showed the injustice of the mo  
quota among the several counties.

"Such was the low state of the public funds, at th  
in consequence of the failure of the imposts, and th  
an act, passed on the 9th of January of that year, Co  
6,000,000 dollars; and it was laid, as the title of the a  
penses of government, and maintaining the public cre

"We would here observe, that peace having taken  
6,000,000 dollars tax, was repealed on the 5th of Ma  
dollars only, was laid for that year."

Balance in the treasury, 1st of January, 1837, 44,839,494 dollars 96 cents, which, according to various deductions made by the secretary of the treasury, was reduced to about 42,000,000 dollars, all of which, except 5,000,000 dollars, was transferred to the several state deposit banks. The treasury having ceased to make loans until 1840, the necessity for which was attributed by one party to the surplus being deposited in the state banks.

STATEMENT of the Receipts into the National Treasury, from Customs, Internal Revenue, and Direct Taxes, and Sales of Public Lands, fractions of a dollar being excluded.

\* Six months.

This money has been borrowed in the shape of treasury-notes and stock. From 1837, up to July, 1841, treasury-notes, bearing mostly six per cent interest, were the medium of borrowing. By the act of 1841, stock, bearing more than six per cent, was authorised. That stock was negotiated nearly as follows:

DATE.	Redeemable.	Interest.	Amount.
	year.	rate.	dollars.
September, 1841.....	1844	5 2-6	14,956
" " 1841.....	1844	5 1/2	3,213,808

## REVENUE AND EXPENDITURE FROM JULY 1, 1843, TO MARCH 1, 1844.

From a subsequent report of the Secretary of the Treasury, made up to February 29th, 1844, we gather the following particulars:

	dhrs. cts.	dhrs. cts.
The balance in the treasury on the 1st July, 1843, was.....	....	10,434,507 55
The receipts from that time till 29th February, 1844, were		
From Customs.....	15,102,688 26	
Lands.....	1,337,052 79	
Incidentals.....	84,208 62	
Loan of 1843.....	70,231 35	
Treasury notes.....	1,910,800 00	
Total.....	....	18,513,901 02
The payments for the same period have been		
For civil list, miscellaneous, and foreign intercourse.....	3,530,065 18	
Military.....	6,174,485 13	
Naval.....	4,703,956 13	
Reimbursing treasury notes.....	9,758,711 49	
Interest on treasury notes.....	547,286 07	
Interest on public debt.....	647,434 97	
Total.....	....	25,361,048 03
Balance in the treasury, 1st March, 1844.....	....	3,587,439 64

From these data it would appear, that the amount of the national debt, including treasury notes, as a part of said debt, has been reduced 7,778,680 dollars 14 cents, between the 1st of July, 1843, and the 29th of February, 1844. Thus :

Amount of treasury notes redeemed.....	dtrs. cts.	dtrs. cts.
Amount received for treasury notes.....	1,919,000 00	9,738,711 49
Receipts for loans for 1843 .....	79,231 35	
		1,980,071 35
Showing a reduction of indebtedness of.....	.....	7,778,680 14

From the annual report of Mr. R. J. Walker, Secretary of the Treasury, we extract the following :

“TREASURY DEPARTMENT, December 3rd, 1845.

“In obedience to the ‘Act supplementary to the act to establish the Treasury Department,’ the undersigned respectfully submits the following report.

“The receipts and expenditures for the fiscal year ending the 30th of June, 1845, were as follows :

VOL. II.

7 Q

**RECEIPTS and Means for the Year ending the 30th June, 1846.**

From customs .....	
From sales of public lands.....	
From miscellaneous sources.....	
Total receipts.....	
Add balance in treasury July 1, 1844.....	
Total means.....	
The expenditures during the same fiscal year amounted to.....	
Leaving a balance in treasury July 1, 1845, of.....	

**THE estimated Receipts and Expenditures for the fiscal Year ending the 30th June, 1846, are :**

**RECEIPTS.**

From customs, first quarter, by actual returns.....	
For second, third, and fourth quarters, as estimated.....	
Total from customs .....	
From sales of public lands.....	
From miscellaneous and incidental sources.....	
Total receipts.....	
Add balance in treasury 1st July, 1845.....	
Total means as estimated.....	

**EXPENDITURES.**

The actual expenditures for first quarter, ending the 30th June, 1845.....	
The estimated expenditures for the other three quarters, ending the 30th of June, 1846, are:	
For civil list, foreign intercourse, and miscellaneous purposes.....	
Army proper.....	
Fortifications, ordnance, arming militia, &c.....	
Indian department .....	
Pensions.....	
Interest on public debt and treasury notes.....	
Redemption of residue of loan of 1841.....	
Treasury notes outstanding .....	
Naval establishment .....	

Total.....  
Which deducted from total means above stated, will leave a balance in treasury on the 1st of July, 1846, an estimated balance.....

"But this balance is subject to be decreased by such additions as may be made, to be expended during the fiscal year ending the 30th June, 1846, by the sums which may be presented for payment of the old treasury notes.

**THE estimated Receipts, Means, and Expenditures for the fiscal Year ending the 30th of June, 1847,**

**RECEIPTS**

From customs for the four quarters .....	
From public lands.....	
From miscellaneous and incidental sources.....	
Total.....	
Add estimated balance to be in treasury the 1st of July, 1846.....	
Total estimated means for fiscal year ending the 30th of June, 1847.....	

**EXPENDITURES.**

The estimated expenditure during the same period, viz.:	
The balance of the former appropriations which will be required to be expended in this year.....	
Permanent and indefinite appropriations.....	
Specific appropriations asked for this year.....	

Total estimated expenditures.....	
Which is composed of the following particulars, viz.:	
Civil list, foreign intercourse, and miscellaneous.....	
Army proper.....	
Fortifications, ordnance, arming militia, &c.....	
Pensions.....	
Indian department.....	
Naval establishment.....	
Interest on public debt .....	

Which, deducted from the total of means before stated, gives an estimated balance on the 1st of July, 1847, of.....

**THE TARIFF.**—The receipts for the first quarter of this year are less by 2,011,885 dollars 90 cents, than the receipts of the same quarter last year. Among the causes of decrease is the progressive diminution of the importation of many high-protected articles, and the substitution of rival domestic products. For the nine months ending June 30, 1843, since the present tariff, the average of duties upon dutiable imports was equal to 37 dollars 84 1-10 cents per cent; for the year ending June 30, 1844, 33 dollars 85 9-10 cents per cent; and for the year ending June 30, 1845, 29 dollars 90 per cent—showing a great diminution in the average per centage, owing in part to increased importation of some articles bearing the lighter duties, and decreased importations of others bearing the higher duties. The revenue from ad valorem duties last year exceeded that realised from specific duties, although the average of the ad valorem duties was only 23 dollars 57 cents per cent, and the average of the specific duties 41 dollars 30 cents—presenting another strong proof that lower duties increase the revenue. Among the causes tending to augment the revenue, are increased emigration and the annexation of Texas. The estimates for the expenditures of 1846 are based chiefly upon appropriations made by Congress. The estimated expenditures of 1847 are founded upon data furnished by the several departments, and are less by 4,108,238 dollars 65 cents than those of the preceding year. These estimates are submitted in the full conviction that, whenever Congress, guided by an enlightened economy, can diminish the expenditures without injury to the public interest, such retrenchment will be made so as to lighten the burden of taxation, and hasten the extinguishment of the public debt, reduced on the 1st of October last to 17,057,445 dollars 52 cents.

In suggesting improvements in the revenue laws, the following principles have been adopted:

1st. That no more money should be collected than is necessary for the wants of the government, economically administered.

2nd. That no duty be imposed on any articles above the lowest rate which will yield the largest amount of revenue.

3rd. That, below such rate, discrimination may be made, descending in the scale of duties; or, for imperative reasons, the articles may be placed in the list of those free from all duty.

4th. That the maximum revenue duty should be imposed on luxuries.

5th. That all minimums, and all specific duties should be abolished, and ad valorem duties substituted in their place—care being taken to guard against fraudulent invoices and under-valuation, and to assess the duty upon the actual market value.

6th. That the duties should be so imposed as to operate as equally as possible throughout the Union, discriminating neither for nor against any class or section.

No horizontal scale of duties is recommended; because such a scale would be a refusal to discriminate for revenue, and might sink that revenue below the wants of the government. Some articles will yield the largest revenue at duties that would be wholly or partially prohibitory in other cases. Luxuries, as a general rule, will bear the highest revenue duties; but even some very costly luxuries, easily smuggled, will bear but a light duty for revenue, whilst other articles, of great bulk and weight, will bear a higher duty for revenue. There is no instance within the knowledge of this department, of any horizontal tariff ever having been enacted by any one of the nations of the world. There must be discrimination for revenue, or the burden of taxation must be augmented, in order to bring the same amount of money into the treasury. It is difficult also to adopt any arbitrary maximum, to which an inflexible adherence must be demanded in all cases. Thus, upon brandy and spirits a specific duty, varying as an equivalent ad valorem from 180 to 261 per cent yields a large revenue, yet no one would propose either of these rates as a maximum. These duties are too high for revenue, from the encouragement they present for smuggling these baneful luxuries; yet a duty of 20 per cent upon brandy and spirits would be far below the revenue standard, would greatly diminish the income on these imports, require increased burdens upon the necessities of life, and would revolt the moral sense of the whole community. There are many other luxuries which will bear a much higher duty for revenue than 20 per cent; and the only true maximum is that which experience demonstrates will bring, in each case, the largest revenue at the lowest rate of duty. Nor should maximum revenue duties be imposed upon all articles; for this would yield too large an income, and would prevent all discrimination within the revenue standard, and require necessities to be taxed as high as luxuries. But, whilst it is impossible to adopt any horizontal scale of duties, or even any arbitrary maximum, experience proves that, as a general rule, a duty of 20 per cent ad valorem will yield the largest revenue.—There are, however, a few exceptions above, as well as many below this standard. Thus, whilst the lowest revenue duty on most luxuries exceeds 20 per cent, there are many costly articles, of small bulk and easily smuggled, which would bring perhaps no revenue at a duty as high as 20 per cent; and even at the present rate, 7½ per cent, they will yield in most cases a small revenue; whilst coal, iron, sugar and molasses, articles of great bulk and weight, yielded last year six millions of revenue, at an average rate of duty exceeding 60 per cent, ad valorem. These duties are far too high for revenue upon all these articles, and ought to be reduced to the revenue standard; but if Congress desire to obtain

the largest revenue from duties on these articles, those duties, at times, exceed 20 per cent, ad valorem.

**"WAREHOUSING SYSTEM.**—Prior to the 30th of June, 1842, a duty of duties; since which date they have been collected in cash. Under the tariff of 1842, our trade in foreign imports re-exported abroad affords a great benefit to our merchants and freight to our commercial marine, by the voyage; but since the last tariff this trade is being lost to the country hereto annexed. The total amount of foreign imports re-exported under the last tariff, both of free and dutiable goods, is 33,384,394 dollars in three years (except during the war) since 1793, and less than was several years. The highest aggregate of any three years was 1794, aggregate 41,315,705 dollars—being in the years 1794, 1795, and 1796, goods are not distinguished in this particular from dutiable goods. The following result: during the three years since the last tariff imports re-exported was 12,590,811—being less than in any one year since 1820, the lowest aggregate of any three years since that date being 57,727,293. Even before the cash duties, for five years preceding the tariff of 1828, of dutiable goods re-exported was 24,796,241 dollars; and for the years 1828, 1829, and 1830, 66,784,192 dollars—showing a loss of 28,020 dollars 49 cents of the combined result of cash duties and of the high tariff of 1842. If it is believed they should be, the only sure method of restoring this warehousing system, by which the foreign imports may be kept in store until they are required for re-exportation abroad, or consumption at home—at the time when for that purpose they are taken out of these stores duties are paid, and, if re-exported, they pay no duty, but only the duty of the present system, the merchant introduces foreign imports of the value of the goods, besides the advance for the goods, make a further advance of 100 dollars for the duties. Under such a system but a small amount of drawbacks: and the higher the duty the larger must be the advance for re-exportation.

The imports before payment of duties, under the same regulations, may be taken from warehouse to warehouse in transit to Canada, may be taken from warehouse to warehouse to Pittsburg, Cincinnati, and Louisville—from New Orleans to New Orleans, St. Louis—and warehoused in these and other interior ports, until the goods are taken out of the warehouse and out of the original position; thus carrying our foreign commerce into the interior with business and cheaper supplies throughout the country.

It will introduce into our large ports on or near the seaboard goods re-exported with our own, to supply the markets of the world. It will save the consumer, by deducting the interest and profit that are now charged upon the goods of our own commerce, and giving profitable employment to our marine. It will greatly increase our revenue by augmenting our exports; and is respectfully recommended to Congress as an important measure proposed for their consideration.

The act of the 3rd of March last, allowing a drawback on foreign goods re-exported to Canada, and also to Santa Fé and Chihuahua, in Mexico, will have a beneficial effect under regulations prescribed by the department, and is beginning to show results—especially in an augmented trade in the supply of foreign goods to our own ports. Indeed, this law must soon give to us the whole of the trade which the St. Lawrence is closed by ice, and a large proportion of the trade which would be still more beneficial if Canada were allowed to export goods in transitu through our own railroads, rivers, and canals to our ports. Such a system, whilst it would secure to us this valuable business on our rivers, lakes, railroads, and canals, as well as augment our trade with the purchase, by Canada, not only of our foreign exports, but of our American products and fabrics, to complete an assortment. Our relations with Canada would become more intimate, and more advantageous to our people.

**PUBLIC LANDS**—The net proceeds of these sales paid into the Treasury in the year was 2,077,022 dollars 30 cents; and from the first sales in 1820, the last was 118,607,335 dollars 91 cents. The average annual sales of millions of acres, yet the aggregate net proceeds of the sales in 1820, was 51,258,667 dollars 82 cents. Those large sales were almost ex-

can only be obviated, at all times, by confining the sales to settlers and cultivators in limited quantities, sufficient for farms or plantations. The price at which the public lands should be sold is an important question to the whole country, but especially to the people of the new states, living mostly remote from the seaboard, and who have scarcely felt the presence of the government in local expenditures, but chiefly in the exhaustion of their means for purchases of public lands and for customs. The public lands are not of the same value; yet they are all fixed at one unvarying price, which is far above the value of a large portion of these lands. The quantity now subject to entry at the minimum price of 1 dollar 25 cents per acre is 133,307,457 acres, and 109,035,845 acres in addition, to which the Indian title has been extinguished—being an aggregate of 242,342,802 acres, and requiring a century and a quarter to complete the sales at the rate they have progressed heretofore—without including any of the unsold lands of Texas or Oregon, or of the vast region besides to which the Indian title is not yet extinguished.

**SUB-TREASURY.**—The only proper course for the government is to keep its own money separate from all banks and bankers, in its own treasury—whether in the mint, branch mints, or other government agencies—and to use only gold and silver coin in all receipts and disbursements. The business of the country will be more safe when an adequate supply of specie is kept within our limits, and its circulation encouraged by all the means within the power of this government. If this government, and the states, and the people, unite in suppressing the use of specie, an adequate supply, for want of a demand, cannot be kept within our limits; and the condition of the business and currency of the country will be perilous and uncertain. It will be completely within the power of the banks, whose paper will constitute the exclusive circulation of the whole community. Nor will it be useful to establish a constitutional treasury, if it is to receive or disburse the paper of banks. Separation from the banks in that case would be only nominal, and no addition would be made to the circulation of gold and silver.

The constitutional treasury could be rendered a most powerful auxiliary of the mint in augmenting the specie circulation. The amount of public money which can be placed in the mint is now limited by law to one million of dollars; and to that extent it is now used as a depository, and as a means of increasing our coinage. It is suggested that this limitation may be so modified as to permit the use of our mint and branch mints for a much larger sum in connexion with the constitutional treasury. The amount of public money received at New York greatly exceeds that collected at all other points, and would of itself seem to call for a place of public deposit there; in view of which, the location of a branch of the mint of the United States at that city would be most convenient and useful. The argument used against a constitutional treasury, of the alleged insecurity of the public funds in the hands of individuals, and especially the vast amount collected at New York, will be entirely obviated by such an establishment. The mint of the United States has now been in existence 52 years. It has had the custody of upwards of 114,000,000 of dollars; and during this long period of time there never has been a loss of any of its specie in the mint by the government. The mint at Philadelphia is now conducted with great efficiency, by the able and faithful officer at the head of that establishment, whose general supervisory authority, without leaving the parent mint, might still be wisely extended to the branch at New York. Besides the utility of such a branch as a place for keeping safely and disbursing the public money, it is believed that the coinage might be greatly augmented by the existence of a branch of the mint at that great city. It is there that two-thirds of the revenue is annually collected—the whole of which, under the operation of the constitutional treasury, would be received in specie. Of that amount a very large sum would be received in coin of other countries, and especially in foreign gold coins—all of which could be speedily converted, upon the spot, into our own coins of gold and silver. The amount also of such foreign coin brought by emigrants to the city of New York is very considerable—a large portion of which would find its way to the branch of the mint for re-coinage.

A considerable amount of foreign gold coin has, during the present year, under the directions of this department, been converted into American gold coin; but the process would be much more rapid if aided by the organisation of the constitutional treasury, and the establishment of a branch of the mint at the great commercial emporium of the union. With the mint and branch mints as depositories, the sum remaining in the hands of other receivers of public money, whether of lands or customs, would be inconsiderable, and the government could be readily protected from all losses of such sums by adequate bonds, and the power, by law, to convict and punish as criminals all who embezzle the public moneys.

The foregoing tables and statements complete our historical statistics of the currency and finances of the United States.

Under circumstances of great national difficulties, which involved the civil and religious liberties of the citizens, and the independence of the republic, we believe the people of the United States would consent to be taxed for that purpose.

even as highly as the people of England have patience, but we cannot, at the expense of truth, flatter Americans would consent long to pay taxes,—direct taxes for carrying on a war with any European power, for a cause which did not involve the independence of her citizens,—and the domestic happiness of the Americans.

The demagogues who live, and speak, and act for popularity;\* ruinous in all countries, but especially so in the United States, and of the most immoral portion of the population, whom are certainly not natives of America, may excite the legislature and executive into a declaration of war; but, in our judgment, of America, and of the American war would be of short duration;—and, that however long it may last, its injuries to American trade and credit, its tendency to financial difficulties, to alienate the several interests, from one another.

Rather than obtrude our own reasons in a world of opinions, throughout, generally, given the opinions and authorities of statesmen; and we cannot conclude this article better.

\* “The people of these states are, by the favour of Providence, in the enjoyment of many privileges, rights, and blessings, efforts and virtues of their ancestors, aided by our geographical advantages, in the enjoyment of many privileges, rights, and blessings, safe from the encroachments or the invasion of the most corrupt demagogues into whose hands the nation may, sooner or later, be delivered. *among these privileges and blessings, freedom of opinion and freedom of the press, the right of electing their representatives, the right of electing a magistrate of the union, or, when he is selected and chosen, of electing ministers, persons who, in the estimation of the most enlightened and virtuous portion of his fellow-citizens, are the best qualified for the discharge of those high stations.*

“It is true, that the right of voting is free enough, and in an election, an elector, imbued with more than a common share of patriotism, in order to save his country from the misfortune of falling into the hands of a double or quadruple his vote, or perhaps go to a greater extent, he shall show satisfactory evidence that he belongs to the regular class of men there is no want of deference in the business of selection under the government, but that the mass of the nation, by which the navigators, merchants, mechanics, manufacturers, and, in fine, the whole, and who, when the country is in danger, fight all—that this great body of those who own the soil, the ships, the factories, the workshops, the country, as well as the honest and industrious labourers who are employed by them, have any influence in the selection of candidates for office, well-informed and prudent persons will, we conceive, affirm.

“In respect, however, to the high officers of government, in such circumstances there have been forced upon an executive, by the necessities of experience, ability, and of independent minds, it has often been the case, that the main in the cabinet, without such a sacrifice of their intellectual, as no one, of a mind and character requisite for the due performance of the office of cabinet minister, would submit to, or to which he could submit, without a loss of public esteem, if not his own self-respect.

opinions upon revenue and finance,—a subject, which we commenced by observing, the power of modern states chiefly depend.

The president of the United States may be one of the most honest men and patriots alive on his election to office : that is if he could have passed with purity through the previous acts of his public life. But how is he to maintain the popularity that will either enable him to administer his high functions, or leave him any chance of being re-elected. The history of the two presidencies of General Jackson afford ample means of unravelling and exposing the system or practice. A man less pure, who merely adapted his views to meet popularity, and possessing the great abilities of Mr. Calhoun, would, in the case of that statesman, have certainly been before this time elected chief magistrate of the United States.

In 1835, during the administration of General Jackson, who was supposed the most sternly virtuous of men, we find the following passage in one of Mr. Calhoun's speeches :—

" I must content myself with saying, that there never was a period in which our institutions were in greater danger, and when our country called more imploringly for relief. It is impossible for any one who has not been an eye-witness, to realise the rapid corruption and degeneracy of the government within the last ten years. So callous has the sensibility of the community become, that things are now not only tolerated, but are scarcely noticed, which, at any other period, would have prostrated the administration of Washington himself. In fact, to prove corruption and abuse, but strengthens the administration in the affections of that powerful and disciplined corps, which is the main support of those in power, and which unfortunately have established so commanding an influence over public opinion. Of this melancholy and alarming truth, we have had of late many striking illustrations. It is time for the people to reflect. A state of things so corrupt cannot long exist, and must, if not reformed, lead to convulsion and evolution."

We find, in a speech delivered by Mr. Bell, who had previously filled the chair as speaker of the house of representatives, and who had been a member of the cabinet, the following remarkable passage :—

" Did it ever strike you, Mr. Chairman, how very few of the leading men of this country have been consistent in their opinions and course upon any one subject, however vital or important? Whatever it is that stamps the course of so many American statesmen so unfavourably in this respect, would be a subject of interesting inquiry. Whether it springs from the nature of our institutions, our frequent elections, and the eagerness of most men to acquire present popularity and power, at any sacrifice, and, consequently, their readiness to adjust their principles to the current of public sentiment at the moment, or to some other cause, I leave others to decide ; but, whatever it is, in any other country where there is a shadow of freedom, in England especially, the authority and opinions of no public man who had signalled his course by one-half the changes and tergiversations which have marked the course of those who are most forward in their support of this measure, would carry the slightest weight or respect with them. Indeed, what difference does it make what principles our candidate for popular support may avow, or what policy he may prefer to advocate, if he may be allowed to say *he has changed*, the moment he gets into power? Or what weight ought any man's opinions to carry with them, when it is known that only a few years ago he held opposite and conflicting views, and at some period anterior to that, he was, perhaps, the champion of the same doctrines which he has now espoused for the second time? Is there, sir, a single advocate of the bill who can lay any just claim to respect or confidence, on the ground of established and settled opinions, upon any one subject whatever?"

Mr. Bell adverted afterwards to changes for popularity, in regard to the dif-

ferent views taken by the same public men with respect to other important national measures. Mr. John Jay was one of the greatest men of his time, and he always enjoyed the confidence of Washington.

“Knowing both from history and experience,” observed Wilberforce, “that men and other creatures will generate characters, I have met with few disappointments in this estimable is certainly of great value, but the transient praise blown on and off by the passing breeze, can weigh but I resemble those of the ocean, and they both depend on wind, tural and common to afford matter for surprise or irritation be pitied rather than blamed, when, mistaking demagogues the demerit of those they appoint to manage the public affairs.”

Even the great Washington did not escape the and Mr. Jay was burned in effigy for having conclu which saved America from another expensive war, a republic. Mr. Lee, of Boston, observes (1843) in

“ The influence and power gained by this body, the base and profligate persons, over the ignorant, the thoughtless, with the absolute control they acquire over the more idle, of the community, *form one of the great obstacles to the development—to institutions which, upon the general suffrage of political power to the wise and the foolish, to the well the industrious and the idle, and worse than all, which permit the irreligious, abandoned person on a level with the most enfeebled citizen in the country.*

“ Now, according to information before the public, the least half a million of electors who, either from an absolute knowledge—reading and writing—or from moral defects of character, are wholly incompetent to a rational use of the vote, from the ordinary increase of population, it is certain that in twenty-four years, be extended to at least a million, it means that of all countries on earth there is here laid open to the view the mask of the ‘ *friend of the people*,’ the widest field of opportunity for a careless or an undiscerning spectator of passing events, and a man who does not perceive the progressive movements of this *rapid declension of the character of the Federal Government, in the estimation and confidence of men of reflection, whichever of the great political parties they may belong.*

"It is this numerous body of persons, *intellectually on exercise of the right of suffrage*, and a portion of whom, will be ever ready for the performance of any work assigned to them by the Government, whom Mr. Calhoun must, we suppose, have referred, as co-ordinated corps' which may be relied upon to *sustain any* *who show a disposition to exercise their political power in the country*. Now, on the supposition that the demagogues are an *army of political automata*—who are as much under the control of the figures of a chess-board as at the command of the play, how can we expect them from controlling the elections? What is there, we ask, in this disciplined and desperate corps of political operatives, who, *while they are engaged in their honest and patriotic work*, constantly in a state of mischievous activity under the stimulation of the demagogues, who are the *unscrupulous and unprincipled* conductors? What is there, we ask, to hinder them from controlling the elections?"

two great contending parties who shall rule the nation? The answer to this inquiry must be, we think, that no reason can be given why this portion of the electors should not gain the control of the country, since, if reference be had to the results of the federal elections, it will be found that the majorities on the one side or the other have never but once been so large that a diversion of the electors from one party to the other, of from 20,000 to 75,000, would not have decided the election. Even at the election of President Harrison, who had the largest majority of votes ever given, except in Mr. Munroe's case, where there was no opposition, a transfer of 73,091 votes from his side to that of his opponent would have defeated the election of that gentleman.

*"The practical operation, then, of our system of free elections, as far as they are within the influence and sway of demagogues, is to place 18,000,000 of people under the control of less than 75,000, and frequently of not half that number, of the most worthless and abandoned persons in the community—MANY OF THEM FOREIGNERS, FRESH LANDED UPON OUR SHORES, and a portion of them coming from the prisons, penitentiaries, and poor-houses of Europe, without any knowledge of our institutions, or any attachment to them—and the remainder the very scum and refuse of our own country, marshalled under the banners of persons of better education than their followers, and having a still greater pre-eminence over them in every quality which can render a man an object of aversion, disgust, and detestation to the intelligent, reflecting, and well-disposed part of his fellow-citizens."*

The following extracts are remarkable as bearing upon the same important subject. They are the opinions of a distinguished gentleman, Mr. Mann, and stated by him before the city magistrates of Boston, in July, 1843:—

*"Two dangers, equally fatal, impend over us;—the danger of ignorance, which does not know its duty, and the danger of vice, which, knowing, contemns it. To insure prosperity, the mass of the people must be both well-informed and upright; but it is obvious that one portion of them may be honest but ignorant, while the residue are educated but fraudulent."*

*"With the heroes and sages of ancient days, I believe in the capability of man for self-government—my whole soul thereto joyously consenting. Nay, if there be any heresy among men, or blasphemy against God, at which the philosopher might be allowed to forget his equanimity, and the Christian his charity—it is the heresy and blasphemy of believing and avowing that the infinitely-good and all-wise Author of the universe persists in creating and sustaining a race of beings who, by a law of their nature, are for ever doomed to suffer all the atrocities and agonies of misgovernment, either from the hands of others or from their own. The doctrine of the inherent and necessary disability of mankind for self-government should be regarded, not simply with denial, but with abhorrence—not with disproof only, but with execration."*

*"Still, if asked the broad question, whether man is capable of self-government, I must answer it conditionally. If by man, in the inquiry, is meant the Feejee Islanders; or the convicts of Botany Bay; or the people of Mexico, and some of the South American Republics (so called); or those as a class in our own country, who can neither read nor write; or those who can read and write, and who possess talents and an education, by force of which they get treasury, or post office, or bank appointments, and then abscond with all the money they can steal;—I ANSWER UNHESITATINGLY THAT MAN, OR RATHER SUCH MEN, ARE NOT FIT FOR SELF-GOVERNMENT. Fatuity and guilt are no more certain to destroy an individual, or a family over which they preside, than they are to destroy a government into whose rule they enter. Politics have been beautifully defined to be the art of making a people happy. Such men have no such art; but, with power in their hands, they would draw down personal and disperse universal misery."*

Mr Mann then adverts to the right of voting at elections by convicted felons and the picture which he draws, and which is corroborated by others, is certainly appalling:—

"The number of convicts at present in confinement in the prisons of the union is very nearly four thousand seven hundred; the average duration of their imprisonment is about four years. For *crime*, in common gaols and houses of correction, is not the average length of their imprisonment is estimated at six years. Culprits live, on an average, but eight years after their expulsion from the number of *eighty-five thousand five hundred* convicts against the laws of God and man—and almost universal in our society, and a very large portion of them competent to any infamous offence, works a forfeiture of the elective franchise. *and true—for the wrong side, and to send you and me to jail*. I believe there is one state in the union whose elections for Congress have not sometimes been so nearly a drawn game, though its own battalion of sin,—would not have been able to elect a politician would call—a very respectable majority."

"Superadded to this standing army of convicted felons, *the wrong side,* and ready and eager, under the command of the same political weight as that of the most responsible, men of the country, there is another army, possibly still more powerful than the one referred to—of *unconvicted felons* who have not committed such overt acts as would bring them into the courts; or, if otherwise, who, from their cautious proceeding, the ministers of the law, may have evaded detection or escape. These persons, then, although not '*convicted felons*,' are, nevertheless, are possessed of *felonious sentiments*, or may have been guilty of the right of voting, in the hands of such men, many of whom have education and the benefits of respectable society, and so have influence—is infinitely more dangerous to the safety of the state than its exercise in the hands of men stamped with the criminality."

To this class of men, and to their conduct and character, must have alluded in the following remarks:—

"Are not the business relations of the community corrupted by speculation and knavery? In mercantile honour and honesty, as buyer and seller, is there not a laxation of all the joints of the community? The number of fraudulent bankruptcies—fraudulent in the surrender of the assets—the rapacity of speculation—the embezzlement of corporate funds; the absconding with the property of government fiduciaries, whether of a United States Bank; the repudiation of state debts;—and that other class, the criminality both of fraud and force—such as the shooting to execute civil process, or the burning of a bank with all its debtors, in Mississippi, because their notes had been lodged in it."

"We look with a kind of contempt, as well as abhorrence, upon the public of South America, which seem to be founded upon earthquakes. Were it not that so much of human nature is revolting, ridicule would overpower indignation at the difficulty to state the number of their overturns, and of late years worth while to keep the tally; but probably the changes of general government have not been much less numerous than in the states, certainly, the changes of party have been so frequent that they have been their most appropriate coat of arms."

*"In one important particular, indeed, we have the advantage of our namesakes in the southern hemisphere; for our revolutions of party, as yet, have been bloodless. How long they may continue so, even in New England, depends upon the measures we take to give predominance to principle over passion in the education of the young.*

"On one of these oft-recurring days, when the fate of the state or the union is to be decided at the polls—when, over all the land, the votes are falling thick as hail, and we seem to hear them rattle like the clangour of arms—is it not enough to make the lover of his country turn pale to reflect upon the motives under which they may be given, and the consequences to which they may lead? By the votes of a few wicked men, or even of one wicked man, honourable men have been hurled from office and miscreants elevated to their places; useful offices abolished, and sinecures created; the public wealth, which had supported industry, squandered upon mercenaries; enterprise crippled; the hammer falling from every hand, the wheel stopping in every mill, the sail dropping to the mast on every sea—and thus capital, which had been honestly and laboriously accumulated, turned into dross;—in fine, the whole policy of the government may be reversed, and the social condition of millions changed, to gratify one man's grudge, or prejudice, or revenge. In a word, if the votes which fall so copiously into the ballot-box on our days of election emanate from wise councils and a loyalty to truth, they will descend like benedictions from Heaven to bless the land and fill it with song and gladness, such as have never been known upon earth since the days of Paradise; but if, on the other hand, these votes come from ignorance and crime, the fire and brimstone that were rained in Sodom and Gomorrah would be more tolerable.

"But I have laboured to supererogation to show both an existing and a prospective deficiency in knowledge for managing the vast and precious interests of this great nation. I have shown, if not an incurable, yet, unless cured, a fatal malady in the heart. I tremble at the catalogue of national crimes which we are exhibiting before heaven and earth! The party rancour and vilification which rages through our newspaper press—in utter forgetfulness or contempt of the great spiritual law, that when men pass from judgment to passion, they will soon pass from passion to violence! The fraud, falsehood, bribery, perjury, perpetuated at our elections; and the spirit of wantonness or malice, of pride or envy, in which the sacred privilege of voting is exercised; the practice of double eating, like parricide in Rome, unheard of in the early days of the republic, is becoming more and more frequent. Although in some of the states a property qualification, and in some even a landed qualification is necessary; yet the number of votes given at the last presidential election equalled, almost without a fraction, one-sixth part of the whole free population in the union. In one of the states the number of votes exceeded, by a large fraction, one-fifth of the whole population—men, women, and children. Will it not be a new form of the republic—unknown alike to ancient or modern writers—when the question shall be, not how many voters there are, but how many ballots can be printed and put surreptitiously into the ballot-box? Then there is the fraudulent registration of votes by the returning officers, because the majority is adverse to their own favourite candidates, which has now been done, on a large scale, in three of the principal states in the union! The scenes of violence enacted, not only *without*, but *within* the capitol of the nation; and the halls, which should be consecrated to order and solemnity, and a devout consultation upon the unspeakable magnitude and value of the interests of this great people, desecrated by outrage, and Billingsgate and drunken brawls! Challenges given and duels fought by members of Congress, in violation or evasion of their own lately enacted law against them; and, within the space of a few days, a proud and prominent member, from a proud and prominent state—the countryman of Washington, Jefferson, and Madison, put under bonds to *keep the peace*, like a wild, fresh-landed Carib. In two of our legislative assemblies one member has been murdered by another member, in open day, and during the hours of session; in one of the cases the deed being perpetrated by the presiding officer of the assembly, who descended from his chair and pierced the heart of his victim with a bowie-knife, and still goes unpunished, though not unhonoured. What outbreaks of violence all over the country;—the lynching of five men at one time at Vicksburg—the murder of human beings by fires—the riots and

demolitions at New York, at Philadelphia, at Baltimore, and the spectacle of our own more serene part of the hearth by a conflagration of the dwelling-place of women and children, cited and brutally executed through prejudice and hostility to the liberty to protest against Protestants, as Protestants protest.

The opinions of a judicial authority of high standing from Judge MacLean, of Ohio, who for fifteen years by any, except two others) was a Judge of the Supreme Court of the United States, may, we consider, be relied upon that these opinions were given when an application was made for his nomination. He would allow himself to be put in nomination for a second time.

“The office of president (says Mr. Mc Lean) in my o also the character of the country, at home and abroad, by office. High as the presidency of this great nation is, it r price. It sinks below the ambition of an honourable mind the sacrifice of the loftiest patriotism. Not to name other Jefferson, Madison, and Munroe, examples of a high and worthy of imitation. Those eminent men, when named f posing on what they had done, and what their known cap the highest public trusts, neither took, nor seemed to t advancement.

"For many years I have been deeply impressed with the ruinous effects of political partizanship. Its introduction has well nigh ruined our beloved country. Before this I sense, our love of country, and, so far as parties are conceiving of the heart, we were happy, as a people, in the enjoyment of prosperity. And whatever may be said to the contrary, the foundation of all our embarrassments. It has been mainly pecuniary revulsions we have witnessed, and it has prostrated pecuniary losses, within a few years past, are almost beyond repairable loss of moral force in our institutions. That monuments of history, who supposes that a free government addresses itself, with all its influence, to the baser passions leads to a widely diffused corruption and consequent ruin can rescue our government from this, the common fate of political action. This action must be elevated. It must rest on a virtuous and enlightened public opinion. Its aim should be the general good—moral strength. Its acts should carry out Monroe, who, on a certain person being recommended to him as a friend, with good qualifications, remarked, with earnestness, 'I do for personal acts of kindness, but in making high public duty to perform, and I must look to the principle from these principles drove me reluctantly from politics assure you that there is no political office, not even the privilege again into politics, on principles opposed to those which endeavour to act.'"

On the question of candidates' pledges he observe language :—

\* The destruction, by a mob of incendiaries, of a Catholic school, mainly to the instruction of female children.

"Pledges, when given by a candidate for public favour, should be received with suspicion, as they are generally made to answer a particular purpose, and are seldom redeemed. No one, perhaps, should be named for the presidency whose opinions on the leading topics of the day are unknown to the public. Until within a few years past, pledges were not required from the candidates for the chief magistracy. And I may ask, what good has resulted from this innovation? Has it made our chief magistrates more faithful to the constitution, and to their general duties? Let a comparison of our late history with the past answer this question. Who thought of asking a pledge from the venerated fathers of the republic abovenamed? A sound head, and an honest heart, I think, are the best pledges. These will rarely fail, whilst experience shows that pledges are made to be broken."

The following passages in Washington's farewell address to the people of the United States may be said to have been prophetic; and happy will it be if his wise counsel shall be followed:

"In offering to you, my countrymen (says this great and good man), these counsels of an old and affectionate friend, I dare not hope they will make the strong and lasting impression I could wish; that they will control the usual current of the passions, or prevent our nation from running the course which has hitherto marked the destiny of nations. But, if I even may flatter myself that they may be productive of some partial benefit, some occasional good; that they may now and then recur to moderate the fury of party spirit, to warn against the mischiefs of foreign intrigue, to *guard against the impostures of pretended patriotism*;\* this hope will be a full recompense for the solicitude for your welfare by which they have been dictated."

Professor Sparks, in his life of Washington, says:

"Nor were his apprehensions," observes Mr. Sparks, "confined to the defects in the system of government, and the modes of administering it. The intrigues of designing and unprincipled men, little restrained by the arm of an efficient power, were still more to be feared. 'There are errors in our national government,' he said, 'which call for correction; loudly I would add. We are certainly in a delicate situation; but my fear is that the people are not yet sufficiently *mised* to retract from error. To be plainer, I think there is more wickedness than ignorance mixed in our councils. Ignorance and design are difficult to combat. Out of these proceed illiberal sentiments, improper jealousies, and a train of evils which oftentimes, in republican governments, must be sorely felt before they can be removed. The former, that is ignorance, being a fit soil for the latter to work in, tools are employed which a generous mind would disdain to use; and which nothing but time, and their own puerile or wicked productions, can show the inefficacy and dangerous tendency of. I think often of our situation, and view it with concern.'

"Demagogues are the natural fruit of republics; and the fabled Upas could not be more poisonous or desolating to the soil from which it springs. Envious of his superiors, panting for honours which he is conscious he can never deserve, endowed with no higher faculties than cunning and an impudent hardihood, reckless of consequences, and grovelling alike in spirit and motive, the demagogue seeks first to cajole the people, then to corrupt, and last of all to betray and ruin them. When he has brought down the high to a level with himself, and depressed the low till they are pliant to his will, his work is achieved. The treachery of a Cataline or a Borgia may be dictated by a fortunate accident, and crushed in its infancy; but the demagogue, under his panoply of falsehood and chicane, may gradually sap the foundations of social order, and his country may be left with no other recompense for the ruin he has wrought, and the misery he has caused, than the poor consolation of execrating his name."

We have made these extracts in order to show how demagogues may endan-

\* That patriotism which, according to Dr. Johnson, is the *last refuge of scoundrels*.

ger the safety of the commonwealth, and may bring horrors of war, and the financial disasters which must only be maintained at great expense; and the loans or heavy taxation. The payment of the first the whole people must voluntarily or forcibly submit either in Europe or America will not serve long unless subject of military expenses, Mr. Lee makes the following

"It might, we think, be safely affirmed, that two or three men, who were not so crippled by idleness or intemperance in the field, would, in this country, cost as much in time of war as would do in England, or perhaps twice that number of Englishmen. It is true we have millions of *militia*, who, as it is said in the rhetorical effusions of the day, are, on the average, equal to Leonidas, Hannibal, Hector, Gengis-Khan, or General Washington, ancient heroes. Now, although no one, we hope, will call this representation (save in its inadequacy to convey a full truth) still it must be admitted that the mass of the citizens of this country is too many important and interesting objects in view to offer more than three times the wages ordinarily paid for such a patriotic service could all rank as high as captains, majors, colonels, or generals, and possess more than all the nations of Europe.

"Admitting, then, that there is a much greater share of the burden in this country than in any other, still, in such an emergency it might be difficult to bring those, who make the highest use of those qualities, into action without a compensation more attractive to them, than the consciousness of serving their country. *as it was, upon the nation by a majority of only six votes,* to gratify the feelings of the chivalrous portion of the nation of gaining any of the objects which its promoters profess to appeal to the prejudices and passions of the people, who represent the nation, into a support of that measure. The evil with the greatest weight upon the *unchivalrous* sections of the nation furnished almost the sole military means of sustaining it.

"The class of persons most desirous of a war, commonly governed many of the promoters of the war of 1813, does not represent the nation to whom the country must look for its defence flowing therefrom. *Demagogues are more efficient in place and suffering position than they are in sustaining and defending.* *war of 1812 taught the nation that lesson,* though it is too easily forgotten.

"*The only available source of revenue is in the duties of war with a naval power, will cease to produce a full sum from it while the country is at peace.* The sum derivable from the navy, for several years to come, at an average of about that of the war of 1812, while only one-fourth of the navy of the United States was against us, the imports declined in value, as has before been the case, from 12,965,000 dollars. Had the war been continued there would have been a still greater reduction in their amount. The exports declined from 6,927,441 dollars. Here was a nation which took aid in the subjugation of the most powerful nation in the world (than at this moment) deprived of its commerce, and its resources of only two years' duration, and against a nation nearly as powerful, and military resources were engaged in defending itself against the old world, aided by nearly all the strength of the new

"In such a crippled condition, as regarded our revenue, and, we may add, its finances, and with government credit too low to borrow any considerable sums, even at the enormous rates it had previously paid for money, there was no resource left but direct taxation, or emissions of national paper money. The former experiment was tried, but it failed of success in some of the most *chivalrous states, the promoters of the war*. The entire amount obtained in that way *was insufficient for the payment of a month's war expenditure*, and had it been pushed to such an extent as the wants of the country required, it would have destroyed the popularity of the administration, and, at the same time, would have failed of its accomplishment. *There is nothing which can be deemed more certain, which is connected with the future, than the determined opposition which will ever be made in all parts of the country to any considerable amount of direct taxation*. If states, some of which are among the richest in the nation, will not submit to a tax of one-fourth of one per cent on their capital to meet the interest on debts incurred for valuable improvements ;—if they will not submit to so slight a burden for their own benefit, how can it be expected that they would, in any events likely to occur, submit to five, or, perhaps, ten times that ratio of taxation for the support of national objects ?—*of wars, for instance, from which nothing can be expected but sufferings and disgrace, unless it be the benefits which may be derived from them by that needy, idle, thoughtless, immoral, or unreflecting portion of a nation, through whose instrumentality wars are usually forced upon a country.*"

Mr. Gouge makes the following statement, which throws light upon some of the various schemes which had been proposed in Congress to raise the means of supporting the war by fraudulent emissions of paper money, instead of resorting to direct taxation :—

"The infatuation of the high authorities of the United States government," says Mr. Gouge, "was as strong as that of the people and the state legislatures. War was declared against Great Britain in June, 1812, and bank notes and bank credits were seized on to defray the expenses of fleets and armies. 'The bank capital has been stated at 75,000,000 dollars,' said the committee of Ways and Means of 1813-14, of which Mr. Eppes was chairman. 'On this capital,' proceeds Mr. Eppes, 'we may calculate with safety on a circulation of 100,000,000 dollars. From this sum deduct 47,569,120 dollars, the maximum of what is deemed necessary for circulation, and the sum remaining, viz., 52,430,880, constitute the ability of the moneyed capitalists to loan. Of this sum we propose to borrow 30,000,000 dollars.'

"In conformity with these principles," continues Mr. Gouge, "about six millions of dollars had been borrowed, in 1812, from the banks, and about four millions more from individuals, who had obtained from the banks the means of lending. These loans were obtained at par. In the next year the government borrowed about 20,000,000 dollars, for every 100 dollars of which it issued a certificate for 113 dollars. In the following year it borrowed about 15,000,000 dollars, for 12,000,000 dollars of which stock was issued at the rate of 125 dollars for 100 (paper) dollars paid in. 'Then,' as Mr. Ing-ham said in Congress, '*then it seemed impossible to borrow further on any terms.*'"

In this emergency Mr. Jefferson, as remarked in Mr. Gallatin's pamphlet of 1831, suggested to the government the expediency of issuing two hundred millions of dollars in paper ; and Mr. Gallatin, in stating that fact, expressed an opinion that a longer continuance of the war would have driven the administration to the adoption of such a measure.

"The general objections," says Mr. Gallatin, "to paper issued by government have already been stated at large. Yet it must be admitted that there may be times when every other consideration must yield to the superior necessity of saving or defending the country. If there ever was a time, or a cause, which justified a resort to that measure, it was the war of independence. It would be doing gross injustice to the authors of the

revolution and founders of that independence to confound which, from ambitious views, have, without necessity, in subjects. The old Congress, as the name purports, was tentiaries delegated by the several colonies or states. It had not the power to lay taxes; the country was con exertions were necessary to resist the formidable power tions were made, and absorbed all the local resources United States through the most arduous and perilous : operating as a most unequal tax, it cannot be denied th Jefferson was strongly impressed with the recollection : in the latter end of the year 1814, *he suggested the pr government, of two hundred millions of dollars in paper* data in his possession, underrated the great expenses of t in the state to which the banks and the currency had bee of treasury notes, or other paper not convertible at will come necessary, if the war had been of much longer cor that a similar state of things will not again occur; but government paper ought to be kept in reserve for extraor

Mr. Gallatin was at the head of the Treasury 1814. From his experience, knowledge, financial sk a statesman, the opinions he entertained upon the t of the country and its future prospects at the perio the respect and confidence of every fair and intellig in his views by Mr. Gouge, who remarks :

*"The news of peace was received on the 13th of Feb arrival of this intelligence we must attribute the delivery of a national paper currency."*

If the negotiation for peace had failed, there wou decline in the value of government securities as to h Jefferson's plan of issuing *assignats* unavoidable. taxes during the war was under five millions.

"The entire revenue of the country," says Mr. Goug direct taxes for 1812, 1813, and 1814, averaged only twel the peace establishment amounted annually to eight mill *four millions, we were endeavouring to carry on a war w the globe."*

Mr. Lee observes :

"These facts afford one instance, among others, of wisdom on the part of an administration that allowed its which no possible benefit could be expected to arise to a had it been successful in its termination. But so far was fully, it is notorious to all acquainted with the facts in th pute between the countries was surrendered to our oppone the formality of a discussion."

"What might have been the amount of the national war, had it been continued, must, of course, be a matter fragment only of the military and naval power of Great B in consequence of the other wars in which she was engag war of 1812 amounted to upwards of 50,000,000 dollars, i war continued; first, in consequence of the increasing f

and, secondly, from the depreciated value of money in which payments were made into the public treasury.

"The expenses of the revolutionary war, estimated in specie, amounted to 135,193,703 dollars. This sum was raised by emissions of paper money to the amount of 357,476,541 dollars, in addition to other sources of revenue of slight amount. The debt existing at the close of the war of 1812 was upwards of 130,000,000 dollars. It was impossible to know the exact sum, as there were outstanding demands against the country to an immense amount, which were not all adjusted and settled for several years after the peace. Mr. Calhoun, who was placed at the head of the war department, in 1817, stated, in a speech made in Congress in 1838, while commenting on the bad financial and fiscal management of the administration of Mr. Madison during the war of 1812, 'that the affairs of that department were utterly disorganized (when he took charge of it), with not much less than 50,000,000 dollars of outstanding and unsettled accounts, and the greatest confusion prevailed in every branch of the public service.' Mr. Calhoun could justly have added, 'and such might have continued to be its condition, had it been intrusted to persons so wholly incompetent to the performance of its duties as some of the individuals have shown themselves to have been, who, of late years, have been placed at the head of that department.' If that office had since been managed with as much skill, economy, and integrity as was evinced by Mr. Calhoun, the saving, even during the continuance of the Florida war, would have amounted to many millions, and perhaps that expensive and disgraceful incident in our history might have been averted.

"It would appear, then, by the facts here adduced, that the paper issues of the revolution produced to the government *something over one specie for three paper dollars*. The credit of the government, when it was proposed by Mr. Jefferson to commence the issues of assignats by an emission of 200,000,000 dollars, was more depressed than that of the revolutionary government during its early existence. It would have continued to decline as the issues increased, for be it remembered, that the local issues of paper were far in excess of the ordinary and wholesome requirements of the country for some time previous to the close of the war.

"To raise three hundred millions of *value*, the supposed expenses of a prolonged war, would no doubt have required the issue of three times that amount. Assuming that calculation to be right, the aggregate amount of the national debt, had the war been continued till 1818, would have exceeded 1,000,000,000 dollars. If the government had maintained the public faith with its creditors, the interest on this debt, at six per cent, which is far below the rate of interest paid during the war of 1812, would have been upwards of 60,000,000 dollars. Superadded to which would have been the ordinary expenses of government, to the extent of about 20,000,000 dollars.

At the termination of the war, assuming it to have continued till 1818, the population of the country may be taken at about 9,000,000. The customs and land revenue, in 1818, was about 22,000,000 dollars. To meet the deficiency of income, a direct taxation would have been necessary to the extent of 58,000,000 dollars upon a population of 9,000,000, everywhere impoverished by a war, and the anti-commercial measures of embargo and non-intercourse which preceded the war. Such was the general condition of the country, but in those sections whose staple products were almost wholly dependent for their sale and value, upon an exportation to foreign markets, the inhabitants were reduced to a miserable state of poverty and destitution. How, indeed, could it be otherwise, when, during the years 1813 and 1814, the exports of cotton and tobacco, on which the population of a large section of the country mainly depended for comfort and subsistence, averaged only 2,779,000 dollars; while the export of rice fell off from 3,021,000 dollars to 230,000 dollars. This is about as near an utter extinction of the commerce of the planting section as might have been expected had our opponents been entire masters of that part of the country.

"Under the adverse circumstances in which the country was left in 1815, by the war with Great Britain, and the still worse state in which it would have been placed by a prolongation of it till 1818, it may reasonably be estimated that an annual direct tax of

58,000,000 dollars, in addition to the duties on imports of as burdensome on the then existing population of 9,000,000 as would now be deemed to be on the existing population of 1819. tionably in a much more prosperous condition, economic people of these states at the conclusion of the war of 1819. tax-paying ability of the two periods, allowing for increased dollars, in 1819, would be as great in 1819, as 123,000,000.

"A prolongation of the war for three years would have direct annual taxes of 58,000,000 dollars, or 123,000,000 dollars. Lee, *"we would ask every reflecting man who takes into resistance which has uniformly been made to taxation on means could have been devised to persuade the nation to attempt to overcome such an emergency, to attempt to answer such a question. Some notion, how as to what might probably be done under such circumstances occurred in the matter of debts incurred by most of the states."*

"It will be conceded, we suppose, that if ever a people in their own hands, may be expected to submit to the payment of taxes, it must be when their avails have been expended for some purpose. For instance, as in the case of the states, most of whom purpose of constructing railroads, canals, &c. Now we regard most of them, for paying a tax which would not be so burdensome as the war debt in question. Some of the borrowing states without ever pretending inability as an excuse for preferring to be shocked at such a dishonourable course as to themselves among the *non-paying* states. The former (*the* in the most chivalrous sections of the country; and *REPUBLICS* considered as ONE OF THE ELEMENTS OF THEIR CHIVALRY.

The foregoing facts may be disregarded by mere talk by those who aspire to the distinction—generally especially in a republic—of becoming MILITARY. In the talk of war in the British Parliament, they may descend to the House of Commons, and they may raise a bluster about war in the House of Commons, but wise and good men in America, as well as in England, have reached conclusions in accordance with the experience of the past and the present. They will, therefore, act upon the conviction that the power of a modern state does not depend upon the number of soldiers, but upon the great extent of territory, but on the soundness of its policy, and of an abundant treasury: the revenues for replenishing the treasury, and the deliberate and permanent consent of the people, upon sound, equitable, and not oppressive principles.

## CHAPTER XXXVII

### TAXATION AND DEBTS OF THE SEVERAL STATES.

WE have in the separate account of each state given a list of their revenues and expenditures. In regard to taxation, we have given a list of the taxes levied by each state.

generally differs from that of another. In **SOUTH CAROLINA**, not a warlike, but an honourable state, which has with fidelity maintained its credit, direct and indirect, income taxes are levied.\* In **MAINE**, the revenue is derived from a state and a bank tax, commission duty, and lands. In **NEW HAMPSHIRE**, which has no debt, by a tax on real property, by a poll tax and a small bank tax.

In **MASSACHUSETTS** the ordinary receipts (exclusive of coin borrowed) amounting to about 420,000 dollars, consists chiefly of a bank tax, producing about 330,000 dollars of revenue, and an auction duty yielding about 55,000 dollars.—(See *Finances of Massachusetts*.) In **RHODE ISLAND**, which has no public debt, the revenue is derived from a tax on banks, pedlars, lottery grants, sales of lottery tickets, spirit licences, auction duties, bank bonuses, civil commissions, and dividends on bank stocks. **CONNECTICUT** has no debt, and the revenue is levied by one cent in the dollar, on a rate called the grand list, dividends on bank stock belonging to the state, auction duties, &c.

\* The rates per cent, &c., of taxes in South Carolina are increased or diminished in accordance with the expenditure. The taxes for 1842 were as follows, viz. :

“ Lots and buildings ; also glebe leasehold.....45 cents per cent.  
On the amount of sales of all goods, wares, or merchandise, sold within the limits of the city of Charleston, by any person or persons whomsoever, and whether for cash or credit, between the 1st of April last and the 1st of day April of the present year, on the amount of such sales respectively—rice and cotton sold by wholesale, by any factor, or goods, wares, and merchandise, sold at public vendue, excepted

20 cents on every 100 dollars. .

Stock in trade of transient persons .....1 per cent.

All profit or income arising from the pursuit of any trade, faculty, profession, occupation, or employment whether in the profession of the law, the profits to be derived from the costs of suit, counsel fees, or other professional income ; and on the amount of commissions received by vendue masters, or other persons vending goods, wares, and merchandise, or real or personal property on commissions : (Judges and other officers exempt from taxation, by the state ; clergymen, mechanics, schoolmasters, and other teachers employed in the education of youth and minors, or the salaries of banks or other clerks where they do not amount to, or exceed, 800 dollars excepted).50 cents per cent.

Buying or selling bills of exchange ; also notes, &c.....60 cents per cent.

Profit and income of persons carrying on business within the city, but residing beyond the limits thereof.....50 cents per cent.

Slaves over twelve years of age .....2 dollars 50 cents each.

Slaves per head under twelve years of age.....1 dollar 50 cents each.

Slaves working out, or employed in the city, whose owners reside without the city

7 dollars each.

Slaves, on gross amount of sales at private sales.....37½ cents on every 100 dollars.

Every coach, or other four-wheel carriage, used within the city, usually drawn by two horses, exclusive of the horses .....25 dollars each.

Four-wheel carriages, usually drawn by one horse, exclusive of the horse .15 dollars each.

Every two wheel chaise, chair, sulky, or other carriage.. 10 dollars each.

Every horse or mule, except such as are used in licensed carts and drays, whose owners reside in the city, i. e. two horses or mules for each licensed double cart, and one horse or mule for every licensed cart or dray.....5 dollars each.

Horses and mules on the gross amount of sales, at private sale. 1 per cent every 100 dollars.

Lots without wells or cisterns.....40 dollars each.

Every dog kept in any lot.....3 dollars each.

Break waggons.....25 dollars each.

Omnibuses, hacks, &c. ....25 dollars each.

“ The taxes generally are the same as last year, with the exception of real estate, last year 40 cents. Salaries last year were liable when they amounted to 1500 dollars ; this year, 800 dollars pays. Break waggons last year, fifty dollars ; this year, twenty-five dollars.”—*Charleston Courier*.

NEW YORK, NEW JERSEY, PENNSYLVANIA, and of the taxes and expenditure, &c., see separate descri

In VIRGINIA the revenue is derived from a poll on horses, private carriages, four and two-wheeled s or carryalls, clocks and watches, pianos and plate, lic offices, lawyers, doctors, keepers of houses of private shows, vendors of lottery tickets, and to owners quisitorial system of taxation, no doubt; but to wh submitted, in order to maintain untarnished the in the credit of the state.

NORTH CAROLINA has no state debt, and the re penditure is raised within the year chiefly by a dire

It makes the aggregate debt of all the states, existing and authori			

**MAINE.**—The stock issued by this state is to be redeemed by the legislature, by the sale of public lands, from the debts due loans, as may be deemed expedient from time to time. The individuals to the state (August, 1838) is 326,721 dollars. The lands belonging to the state is 1,400,000 acres, valued at 1 divided lands belonging to Maine are estimated at 3,011 number of acres 4,411,000. This total includes half of the river, in the King of Holland's award. The stock of this is transferable by the holder, and the interest in all cases is payable on 235,000 dollars is payable at Boston annually, and the state treasury, annually and semi-annually; the stock bears 4 per cent. The value of the taxable property of the state in 1838 was 24 cents.

**NEW HAMPSHIRE** has issued no stock.

**VERMONT.**—The state has issued no stock, and has no

**CONNECTICUT.**—This state has issued no stock or bills of war.

**RHODE ISLAND.**—This state has issued no stock, and

**MASSACHUSETTS.**—Interest on two millions of stock paid on the road corporation, in whose favour the stock is created; the balance at the state treasury, the several corporations reimburse interest so paid out. The scrip in all cases is made payable necessary in transferring the same. The real and personal property is valued at 208,360,407 dollars.

**NEW YORK.**—This state commenced issuing stock in 1817 on the Erie and Champlain canals. The sum of 600,000 dollars was raised by the law of 1817 created a board of commissioners of the state officers, and placed under the management of the board. The bonds were pledged for the payment of the money borrowed. The auxiliary funds, thus set apart since the first organization of 5,824,761 dollars, which exceeds, by 276,000 dollars, the value of all the money borrowed for the Erie and Champlain canals to 1838. From 1821 to 1838 these two canals have yielded 97 cents. The result is, that the whole of the original debt of about two millions and a quarter, has been paid off, and the law authorising money to be borrowed previous to 1825 contains the provision: "That it shall not be lawful for the commissioners of the canal fund, under this act beyond such amounts as, for the payment of the canal fund, at the time, shall be deemed ample and sufficient."

In 1825 the financial policy, in regard to moneys borrowed, was changed, and loans from that time to the present have been authorised, without setting apart specific funds for the payment of interest. In each case, however, the payment of the interest is made a charge on the treasury; and provision has been made to borrow from the Erie and Champlain canal fund to meet this demand on the treasury. In 1837, after the suspension of specie payments, this state paid the interest on its whole debt in coin, and redeemed about one million of the stock due in 1837, by paying 109 dollars in New York city paper for each 100 dollars of stock redeemed. For six years, from 1833 to 1838, the revenue from the tolls of the canals, after defraying all expenses of repairs, and paying interest on the whole amount of the outstanding debts, has yielded an average surplus of 610,000 dollars per annum. This surplus will sustain a debt of 12,000,000 dollars.

The stocks issued by the state of New York are transferable in the city of New York, either by the owner in person or by a power of attorney. The original certificate, in all cases, to be produced when the transfer is made.

The aggregate valuation of real and personal estate in 1837 was 627,554,784 dollars.

PENNSYLVANIA.—This state has engaged to pay the interest on its stock at the bank of Pennsylvania, where the stock is transferable. The following revenues have been set apart for the payment of interest on the stock loans, viz., canal and railroad tolls, dividends on turnpike and bridge stock, auction duties, collateral inheritances, county rates and levies, tax on personal property, and escheats. Whenever the revenue arising from the above sources is not sufficient for the payment of the interest on the stock loans, the deficiency is taken out of the treasury proper. The acts of assembly, directing the loans to be made, direct also that the governor shall borrow on the credit of the commonwealth, and such fund or funds as have been, or shall be created, for securing the punctual payment of the interest and the reimbursement of the principal.

The aggregate valuation of real and personal estate in 1835 was 294,509,187 dollars.

NEW JERSEY has not issued stock of any kind, or loaned her credit to any company.

MARYLAND.—This non-paying state engaged in all cases to pay the interest on the stock half-yearly and quarterly; but the companies which the state has aided by its loans were bound to reimburse the treasury for the amount of interest paid from time to time. A sinking fund has been established from premiums and other sources, which now (1838) amounts to 1,070,306 dollars 03 cents, which is applied to the purchase of the state stock.

During the suspension of specie payments, this state did not pay the interest on its stock, either in specie or its equivalent. Some of the holders of the stock refused to receive depreciated bank paper for the dividends, and the treasurer, in December, 1837, reported this fact to the legislature; and in March, 1838, an act was passed which provides that the state treasurer shall cause the interest on the state stock that shall hereafter accrue, and that which has accrued since the 1st of April, 1837, to be paid either in coin or its equivalent in current bank notes, to be determined by the commissioners of loans by the price of coin in Baltimore on the quarter day.

The private, real, and personal property, other than merchandise, and rights and credits of all sorts, were estimated at above 100,000,000 dollars. No uniform mode of valuing property throughout the state is observed. In most of the counties the valuations are made under the acts of 1785 and 1797, which require all lands to be put down at 3 dollars per acre, male slaves at the highest 100 dollars, and females at 80 dollars each.

VIRGINIA.—The interest on the stock issued by this state is payable semi-annually at the treasury, in gold or silver. The profits of the improvements for which the stock is issued are pledged for the payment of interest and principal; and, if necessary, the general revenues of the commonwealth are pledged for the payment of the interest.

The aggregate valuation of the real property of the state in 1818, was 206,893,978 dollars; and now, probably, 300,000 dollars. There is no mode of ascertaining the personal property.

SOUTH CAROLINA.—The faith of the state and the capital of the bank of the state of South Carolina, and the annual dividends thereof, are pledged for the payment of 800,000 dollars, issued from 1822 to 1826. And the annual dividends have been formed into a

sinking fund for that purpose, and at this time (October 1880) 800,000 dollars, so that the six per cents, redeemable interest on 2,000,000 dollars, to be loaned to the Louisville and Nashville railroad, is payable semi-annually in London. The 2,000,000 part of Charleston, is to be loaned to individuals, and the 800,000 part to the mortgages of individuals. The interest on the state bonds is paid in London.

Valuation of property, 200,000,000 dollars.

OHIO.—The interest on the stock of this state is payable in cash. The stock is transferable. Auxiliary funds are set apart for the redemption of the bonds in case of a deficiency therein, it is made the duty of the legislature to provide an adequate amount by direct taxation. The loans were secured by specific revenues for the payment of both principal and interest.

The state of Ohio, at the commencement of its loans, was on a firm foundation, providing by direct taxation for the ultimate redemption of the principal. In 1837, the state made payments, Ohio paid the interest on its debts in New York dollars for each 100 dollars of interest.

Aggregate valuation of real and personal property, 110,000,000 dollars.

KENTUCKY.—This state, in all cases, pays the interest on its bonds. Funds are set apart for the payment of the interest; but if insufficient, the state is bound to resort to direct taxation. The state has established a sinking fund for the payment of the debt; it has also bonuses and dividends on bank stock, premiums on scrip, and profits of the common stock and all internal improvements, profits of the common stock in the old bank of Kentucky, and the excess of the state treasury of each year.

ILLINOIS.—In addition to the usual pledge of the faith and credit of the state, there is specifically pledged for the redemption of the bonds granted by the general government to aid in constructing the Illinois canal, which is equal to the whole cost of the canal. There is also a sinking fund for the final redemption of the bank bonds, the dividends and the profits of the banks, which amounts to nearly half a million of dollars annually. These bonds. This is a non-paying state.

INDIANA.—The canal lands granted to the state by the federal government, on the Wabash river, are pledged for the payment of the loans made for the canal. This is a non-paying state.

Aggregate valuation in 1837, estimated at 95,000,000 dollars.

LOUISIANA.—The interest on the state bonds was paid by the state when they were originally issued. The interest on other state stocks is paid by the state.

CONSOLIDATION ASSOCIATION.—These bonds were guaranteed by productive property, amounting to 3,000,000 dollars. The state guaranteed more than fifty per cent on his stock, and this amount to be used to meet the payment of the bonds by the bank. The state guaranteed as stockholder for 1,000,000 dollars, and on the remainder the bonds were to be divided accordingly with the stockholders. Dividends were paid, and in the same proportion. The profits, until the sinking fund to meet the redemption of the bonds. This bank was established to meet the redemption of the bonds. This bank was established to meet the redemption of the bonds.

The Union Bank has bonds to the amount of 7,000,000 dollars, secured on similar principles as the above. The original guaranteed productive property is 8,000,000 dollars. The state for its guarantee of the net proceeds.

The Citizens' Bank received loans to the amount of 4,000,000 dollars, authorised to demand 4,000,000 dollars, more. The guarantee of mortgages on real productive property. The state was

profits, which were only to be divided as the bonds were paid by the bank, and in the same proportion. This is also a non-paying state.

**MISSISSIPPI.**—This state has issued bonds on the faith of the state to the amount of 7,000,000 dollars, and has subscribed that amount in the stock of two banks. This is a repudiating state.

**MISSOURI** has issued bonds to the amount of 2,500,000 dollars to the state bank of Missouri.

**ARKANSAS** has issued 3,000,000 dollars bonds to two banks in that state. This is a non-paying state.

**MICHIGAN.**—The proceeds of the public works as well as the faith of the state were pledged for 5,000,000 dollars—the lands set apart for the university were pledged for the loan for that object. The loans to railroads were secured by pledge of the roads, &c. The interest on 100,000 dollars issued to defray the expenses of the controversy with Ohio, was to be paid by a direct tax. But Michigan remains a non-paying state.

**NORTH CAROLINA.**—This state has set apart a fund for internal improvements and for the establishment of public schools, which is placed under the direction of two boards, styled the Literary and Internal Improvement Boards.

**TENNESSEE.**—The interest on the state bonds subscribed to the Union Bank, were paid by the dividends on the stock, until the revulsion of 1837, after which the state paid the interest from the ordinary resources of the treasury. The interest on the bonds issued to railroad and turnpike companies has been paid by the state, and the companies are bound to reimburse the treasury for the sum from time to time paid.

**STATEMENT** showing the Amount of Stocks issued, and authorised by Law to be issued, by the several States named below, in each Period of Five Years, from 1820 to 1835, and from 1835 to 1838.

\* Nearly all redeemed.

Hence, state after state, as its credit fell and the point at which taxation became necessary approached, became delinquent. Rulers, in some cases, shrank from the imposition of taxes; and in others, as in Pennsylvania, where tax-laws were passed, they became inoperative by the force of public opinion. In those states where the debts were created for the supply of bank capital, the failure and liquidation of the banks caused the interest to cease, and the ultimate payment to depend upon the value of the banks' assets, backed by the responsibility which involves taxation. This is the case in Louisiana, where two banks have failed (the Canal and Consolidated), for whose capitals the state loaned its credit to the extent of 9,568,888 dollars. The interest on this the governor has announced will not be paid.

It is stated in the *Merchants' Magazine* for July

"The affairs of Illinois next present themselves in a former number, alluded to the position of the canal as 1,600,000 dollars to complete the great canal, on pledge belonging to it. After a long period of delay, the bond have finally subscribed the whole amount, on condition tax, part of the interest on the whole debt. Simultaneous has been introduced into the Illinois legislature, levying cent on the whole debt, with the exception of the bonds Stebbins bonds; the first payment to take place on the continued thereafter. This law is that which is required the bondholders; and as soon as it is approved, the bond—one by the 'Boston committee,' on behalf of the New York creditors, and one by the governor. The cost of the canal, when finished, will be as follows:—

Sum actually disbursed.....  
Liabilities of the canal.....

Cost of the canal at this time.....  
Sum required to complete it.....

Cost when complete, under the new law.....

"The present debt of the canal is composed as follows

Scrip and interest to December 1st, 1844.....  
Debt not bearing interest.....  
Ninety day checks.....  
Due contractors.....  
Damages on private property.....  
Scrip issued by Governor Ford, in payment to dam-  
tractors.....  
Interest due upon the same to November 1st, 1844.....

Total.....

"The completion of this work will add to the resources while the sale of the lands along its border will more than for its completion, and leave the net revenues of the improvement debt, and ultimately relieve the people from it

"INDIANA, during the past session, has done nothing

state is dreadfully embarrassed by the circulation of an unconstitutional state paper, which circulates as money. The quantity of this stuff is as follows :—

STATE PAPER.	Issued.	Redeemed.	Outstanding Nov. 1st, 1844.
	dollars.	dollars.	dollars.
Scrp.....	609,080	164,530	535,450
Treasury notes, six per cent.....	1,500,000	872,665	633,735
Bank scrip.....	722,640	210,730	511,910
Total.....	2,832,620	1,247,925	1,081,115

“ While this depreciated paper fills the channels of circulation, and forms the medium in which taxes are paid, no effectual movement can be made towards the payment of the state interest. The creditors have, however, intimated that they would be glad to receive a payment of even a small part now, as an earnest of paying the whole by and by. This intimation was misrepresented by a designing agent, to signify that the creditors would consent to take a payment of three per cent in full of five per cent due to them. The disappointment attending the discovery of this trick prevented any *bonâ fide* movement at the present session. There is but little doubt, however, but that, at the next session, a small tax will be laid to commence the payments, and the deficit be funded, bearing interest, up to some future year, when the whole will be resumed. This is the more likely, that there is every probability of a grant of land from Congress, sufficient to complete the White Water canal connexion with the Wabash and Erie, forming a noble work that must, sooner or later, yield a large revenue towards the state expenses.

“ In MARYLAND no effective steps have been taken towards redeeming her honour; but there is every hope that something may be done. In Louisiana, Arkansas, and Florida, the money for which the governments are responsible was borrowed for the purpose of being constituted the capital of banking institutions. These banks were what are called property banks, from the mode of their organisation. The bonds of the state were issued to the banks, and the stockholders were required to deposit mortgages of their plantations to double the amount. The bonds were then endorsed by the banks, and sold mostly in London. The proceeds were divided among the stockholders, *pro rata*, as loans, on pledge of the mortgages. The banks then issued circulating bills, and received deposits to make regular discounts. All these institutions failed, of course, and the state governments have done nothing towards the payment of the bonds; which must depend, in a great measure, upon what can be realised from the property held by the banks.

“ It is, however, very apparent that the period for a return of all these states to their payments is rapidly approaching; and that time will be hastened by the great desire apparent among European capitalists to renew their confidence and investments, whenever they can receive any encouragement to do so. The loan made to the state of Illinois is a remarkable evidence of this, and evinces a great change in public opinion from the fall of 1841, when an agent of the United States federal government in vain sought to borrow a few millions in Europe. That loan was afterwards made at home, and has since been paid, principal and interest. It was not, however, from any supposition, that the United States was not good for the loan; but from the idea that the mortification attending such a loss of credit would operate upon the states, and induce payments. It has now become pretty well understood, that the want of ability (?), and of a proper organisation of the state finances, is a greater obstacle than any supposed want of will to the payments.”

In the account which we have given of the finances of Pennsylvania, we animadverted with due severity on the delinquency of that state. At the same time we predicted that the debts of Pennsylvania would be paid; and, from the authorities of the state, itself, we proved the ability to pay, and the disgrace of having, even for a day, suspended the fulfilment of its obligations.

The following remarks on the state debt of Pennsylvania and South Carolina by Mr. Lee, of Boston, are instructive on the subject :—

"Of the *non-paying* states," says Mr. Lee, "there is slightest excuse on the score of pecuniary inability for its improvements, for which the debt of 40,000,000 dollars to be worth 20,000,000 dollars. We will assume their value they probably would sell for. This state has been valued at 14,000,000,000 dollars. If we reduce it to 800,000,000 of one per cent on its amount would pay the annually of one half per cent would, in about five years, clear off. It is not so great a burden as is borne by South Carolina to and yet the voice of repudiation or non-payment has borders, and, we will venture to say, never will be uttered a sentiment of universal reproof and reprobation. She is lightened views and higher sentiments than have been even people of Pennsylvania, *but by their rulers, who have not to tax their constituents, even for the promotion of their debt of the character of the state, both of which, as it would would see sacrificed rather than risk the loss of their support. There is no want of able and high-minded men seldom have had a political ascendancy, while South Carolina great parties may prevail, is generally governed, not by and best men.*"

Mr. Lee then proceeds to remark upon the chief the latter state :

"The right of suffrage in Carolina is confined within Pennsylvania, and though that is not in accordance with the country, its practical effects have proved to be so in principle has been brought into action. In Pennsylvania of citizens are sincerely desirous of electing the person but, in common with the majority of electors in most of the guish between the *professed friends of the people* and the otherwise in Pennsylvania, her debt would never have repaid nor would there have been a default in the payment of the sylvanian legislature is composed of men of sufficient integrity their duty, there will be no availing opposition to the payment of debt, on the part of their constituents, who, if less intelligent ruled that state the past ten or twenty years, are, it is them in point of honesty. That such is the case may reflect that numerous petitions have been sent to the legislature might be made by the imposition of taxes for the payment of debt. *But while there has been money enough in the treasury for political operatives, or that portion of them who are the people,* it would seem, by their conduct, that they were the adoption of such measures as were deemed necessary for the maintenance of the honour and character of a and prosperous commonwealth, termed the 'Key-stone' of the disadvantage from the low character of the majority of her dishonesty of the mass of her citizens. It is their misfortune other states, to be imposed upon by political demagogues, been confided the governing power.

"If the economical and financial concerns of Pennsylvania of persons of as much intelligence and character as have such matters by those who have ruled over some of the states, Virginia and the Carolinas in the south, Kentucky and some of the New England states in the east. The guidance of a class of public men corresponding in ability of the rulers of the states in question, there could be no in

the *insignificant* sum requisite for the payment of the interest on her debt. In some of the better governed states referred to, provision has been made for a more burdensome debt, taking into view the superior pecuniary ability of Pennsylvania; for instance, the state of Ohio; while there are others not so heavily in debt as Pennsylvania, yet, considering their inferior amount of products, are taxed two or three times as much as it would be requisite to tax the state of Pennsylvania for the payment of the interest on her debt, were it far beyond its existing amount."

As we have before stated, and as Mr. Lee shows, there has been no want of ability to pay; and a change of circumstances and force of public opinion, and, we hope, the honesty of a great majority, has at length brought the means of Pennsylvania so far into fiscal operation, that the interest of the debt was paid in February, 1845.

"We admit," continues Mr. Lee, "that, in the state of New York, and other heavily indebted states, there has been a great backwardness in resorting to taxation, but their citizens have finally submitted to it rather than be disgraced by a foolish as well as dishonest disregard to the credit and character of their states; accompanied, it is hoped, with a determination not to allow their several governments to contract debts for the erection of public works, which can always be undertaken and managed with more judgment, economy and skill by individuals than by states.

"If the policy once recommended by influential men, viz., that of building canals, railroads, &c., by the United States government, had been acted upon, there might have been, and probably would have been, hundreds of millions of dollars sunk, as in the states, in injudicious and unproductive enterprises, or, as they are commonly termed, '*improvements*.'

"If it were possible to overcome the determination evinced by the nation, even when under the guidance of men of ability, experience, and virtue, to resist the imposition of any considerable amount of taxation, it must be done in cases where the sums levied upon them have been disbursed, or are to be disbursed, for their direct benefit;—for instance, as in the construction of public works of great and general utility, and which tend to the promotion of individual interests. *But in all such instances it has been found extremely difficult to impose taxes, however moderate and necessary, although there has been but little difficulty in obtaining from the people the power of contracting debts, whenever it suited the views and interests of their political leaders, who, for the most part, not belonging to the class of tax-payers, have been utterly indifferent to the pecuniary consequences of sinking the sums borrowed in ill-conceived, ill-managed, and unproductive works of improvement.*

"As to direct taxation, which the fiscal wants and financial embarrassments of the country have often rendered necessary, it has constantly been resisted, even when the country, as in 1812, 1813, and 1814, was in a state of discredit tending to utter bankruptcy. A reference to authentic sources shows that, from the organisation of the government down to this period of time, the entire amount of income derived from direct taxation is but 34,995,330 dollars. If this sum is divided among the fifty-four years of our national existence, it dwindles down to the insignificant average amount of 648,062 dollars. The total amount of direct taxes collected in fifty-four years, from a nation which has, for most of the time, been undisturbed by wars, is less than one-seventh of the amount of the taxes now annually levied on the people of the United Kingdom of Great Britain, about seven-eighths of which is borne by the people of England and Scotland, containing by the enumeration of 1841, a population somewhat less than these United States are now supposed to contain. The revenue of the United Kingdom has averaged, in 1841, 1842, about 249,000,000 dollars. Its expenses have somewhat exceeded that sum; yet *monarchists* as they are, and, consequently, far below the people of this democratic confederation in patriotism and virtue, the voice of repudiation and non-payment has not had utterance amongst them. And for the honour of our ancestors, to whom, as ex-President Jackson has told us, '*we owe many of our most valuable institutions*,'

and, among them, that system of representative government, preserve and to improve them,'—in that nation so justly ciple, and its severely tried integrity, we hope and trust tion and non-payment will never be heard, however popular and may continue to be, among some portion of their degraded and despised descendants in this country; for, should precedencies to all government become prevalent in that country, the nations in the old world, who, since the fall rapidly in the improvement of their institutions, would be on the downward road of political demoralisation and political corruption.

“Let those persons, however, who condemn this national folly and dishonesty of a portion of them, bear in mind UNIVERSAL SUFFRAGE PRINCIPLE, by the operation of which a vile, worthless, and depraved individual has as much political influence as the wisest and best man in the country; and the political workings of that principle, as to throw the effective administration of the general government, and the state, into the hands of the worst portion of the electors.”

Mr. Lee then proceeds by observing that—

“If the rulers of England and France were selected dependent on such constituents, the doctrines of repudiation as current and as popular among them, as they have been are, in some of these twenty-six democratic republics, without tensions to intelligence, good faith, honour, and integrity, of civilisation.

“In respect to political morality, like many other abstract principles, repudiation of debts, for instance, though common to all political communities, is not everywhere so viewed.

“The people of the state of Mississippi,’ says their governor, are just, and just, yet jealous of their rights and honour, both pertinacious to do any thing that is right and just; therefore they have influence, dared to disown and reject, or, to use a more delicate phrase, the bonds issued on account of the Mississippi Union, the same being vicious, and prohibited by the constitution. the constitution from tarnish, violation, and repudiation. and just, and at the same time so enlightened a people, I believe that the faith, credit, and constitution of the state will be an integrity and promptness which will endure the test of

\* In justice to the paying states, we select the following extracts from the speech of Kentucky:—

“This exhibition of our financial condition is quite encouraging. It is a gratifying fact that our state debt bears little or no comparison with that of other states; that, if prudently and wisely managed, it can be easily paid, without in any respect proving a cause of oppression or in that the state has in some degree realised an equivalent for her expenditure in many useful and valuable public works.

“To free ourselves from debt, to meet all our liabilities promptly, to stand before the world as a bright example of a state that complies with her engagements, to furnish no just cause of complaint to any foreigner, with whom we have contracts, to avoid heavy indebtedness, and to act honestly and uprightly—is, in my humble view, of more importance than the completion of all the internal improvements which we have undertaken, if made at the sacrifice of honour and violated faith with the people, and, when due, dishonestly and corruptly with the creditors.”

“The illustrious commonwealth of Kentucky, I am most happy to place in the estimation of her sister states, not only for her patriotism, but for the place she can hold up her head with pride and confidence before the whole

"Here," says Mr. Lee, "is an exhibition of what is termed *moral courage* which has seldom been imitated, and still less frequently equalled. It was rewarded by a transference of the courageous individual from whom it emanated to the national legislature, where similar sentiments are supposed to be prevalent among those who are *brave enough*, and *honourable enough*, to *disown, reject, or repudiate a debt*, or do any thing else that is right and just. There are multitudes of governors, senators, and others in authority in the United States, equally *brave* and *just* as this Mississippian Aristides."

"If the true interests of the borrowing states had been consulted by their rulers there never would have been a loan contracted on behalf of any of them for the use of the state, or of individuals who leaned on the state for aid, without the contemporaneous enactment of a law levying a tax sufficient in amount to meet the accruing interest on the sums borrowed. Such a measure would have been a check upon ill-conceived and ill-managed enterprises, and have prevented many, which have proved ruinous in their results, from having been undertaken. In cases, too, where loans have been effected, the principal of the debt would not have been swelled by an accumulation of interest. Take the case of Pennsylvania, about ten millions of whose debt arises from interest, which, instead of having been annually discharged by the proceeds of taxes, has been settled by increased issues of stock certificates.

"The taxing policy is usually acted upon where the rulers are influenced by a principle of patriotism, instead of being swayed, as is too commonly the case, by a desire to obtain that species of popularity which shrinks from no sacrifice of the public welfare, so long as it may be deemed by them as promotive of their private and personal purposes. Unfortunately for this nation, a majority of the men who usually have been invested with the power of contracting debts, whether in the national legislature, or in most of the state legislatures, have been too irresponsible in their pecuniary circumstances to share in the burdens imposed on their constituents by their creation; or, if otherwise, too careless of character, or too wanting in principle, to be influenced by that consideration, or by any other high motives which ought to affect the feelings and govern the acts of public men.

"If there are persons disposed to doubt, or to deny the truth and justice of these strictures on the characters and conduct of the class of men referred to, let them investigate the proceedings of the state legislatures, and see the pernicious results of their financial transactions as manifested in the pecuniary burdens, and in the disgrace inflicted on their constituents. Or, as regards the national legislature, in the enormous expenditure caused by our wars of aggression, which never would have had existence if the affairs of the nation had always been under the management of prudent, wise, honourable, and patriotic persons, who, besides being under the influences and restraints of good principles, may have had something to lose and something to suffer from the losses, miseries, and disgrace always incident to wars of aggression, revenge, or ambition; and such has been the character of all the wars in which these states have been engaged, save that in which they were involved in defence of their colonial rights, and which terminated in the establishment of their national independence.

"Having adverted to the conduct of the *repudiating* states, from some of which, considering the ignorance and demoralisation of a majority of their population, no good can be expected during the lives of the present generation; and to the course matters have taken in *non-paying* Pennsylvania, from which better things were expected, and

forfeited, her credit has never been dishonoured, and I am bold to say, never will be with the consent of her worthy and patriotic citizens. The price of her bonds, even in the present depressed state of the money market, proves her standing and character abroad, and ranks her in the highest class of states determined to meet their liabilities. This must be a most gratifying fact to every citizen of the state. May she always maintain the high reputation she now enjoys. The best mode of effecting this object, however, suffer me to say, is to look with a steady and constant eye to the payment of our old debts, and to be careful how we contract new ones."—Dec. 31, 1841.

are still expected ; let us refer to the conduct of New York and Massachusetts. How did these two prosperous and wealthy states behave under circumstances much more favourable to the exercise of the taxing power than those in which Pennsylvania and most of the indebted states are placed ? Why, as we have already shown, they evinced as great a reluctance to the imposition of taxes as the Pennsylvanians have done ; and, had they been exposed to as great a trial, it may reasonably be inferred from their conduct that they might not have shown more firmness of principle than has been exhibited in Pennsylvania or Maryland.

"In respect to New York, as already stated more at large, it required the most strenuous efforts of the most intelligent, reflecting, and responsible portion of her citizens to overcome the resistance made by the remainder of them to a taxation of 600,000 dollars. This resistance to taxation was made when, from the financial embarrassments of the state, the certificates of its debts had, in consequence of discredit, fallen from 105 to 76, and could not long have been sustained at that low point had the taxing policy been defeated. And what was the burden thrown upon the state by this wise and necessary measure ? It amounted to one-twentieth part of one per cent on the property of the state, whose annual products do not, according to the estimates of her own citizens, come short of two hundred and twenty or thirty millions of dollars. Imperceptible, however, as such a requisition upon the resources of a state must be, there are complaints made in some quarters of the severity of its bearings on the landowners. This is the representation made by the high functionaries connected with the fiscal department of government of the state of New York."—*Letters to Cotton Manufacturers*, 1843.

Maryland, and Mississippi, appear to us the most likely to defer a return to the honourable fulfilment of their fiscal obligations ; although we believe that *necessity*, and *self-interest*, will eventually cause even those states to pay. There is at present, we regret to say, very little hope of payment held out by either ; and a recent message of Governor Thomas, of Maryland, shows that all the remedial measures, heretofore adopted, have signally failed, and the interest in arrear, which was 859,656 dollars on the 1st of December, 1842, and 1,171,873 dollars on the same day of 1843, had swelled on the 1st of December, 1844, to 1,450,961 dollars. Reviewing the projects which have been adopted to produce the requisite amount of revenue, the governor has but to record a series of disappointments. He says—

"It was assumed that the act of March session following, imposing a tax for the first year of twenty cents, and for the three next years twenty-five cents in the 100 dollars on the assessed value of the real and personal property of the state, would bring into the treasury for the four years ending on the 1st of December last 1,818,256 dollars 57 cents, while it appears that the whole amount received from that source within that period is but 985,155 dollars 17 cents. In aid of these estimated incomes, other laws were enacted, expected to bring into the treasury in the course of each fiscal year 200,000 dollars. These laws have been in force during three fiscal years, and, instead of realizing the expectations of their authors by contributing to the demands upon the treasury the sum of 600,000 dollars, have added only 15,297 dollars 95 cents to the income of the state. Notwithstanding these results, the committee of ways and means again, at the last session, founded their action upon estimates, which have proved fallacious. They anticipated 490,000 dollars, but the actual receipt has been only 272,145 dollars. The several revenue laws passed at December session, 1841, imposing taxes on incomes, on broken silver plate, watches, and ground rents, added to the interest expected from the Baltimore and Susquehanna Railroad and the Susquehanna and Tide Water Canal Companies, would, it was confidently said, add to the resources of the past year 145,000 dollars. From these sources the whole income received is but 32,732 dollars 95 cents."

The following paragraph, in which repudiation is hinted at, looks rather ominous :

“These defalcations in the revenue are to be imputed in a great degree to the palpable insufficiency of the whole taxes levied, even if punctually paid. As long as our tax laws have this obvious aspect, we may expect a large portion of the public dues will be withheld, in the belief that the attempt to pay the public debt will, at no distant day, be abandoned.”

*What an extraordinary confession of public dishonesty : i. e., a belief that the attempt to pay the public debt will be abandoned !!!*

All the states of the union have pledged their property and their honour for the payment of their debts.

In conclusion, we have now gone through the financial details of the United States as a federal government ; and we have searched into the causes of the delinquency of some states, and we hope we have done so, as impartially, as if we were examining the financial condition of the British empire.

Great injustice has been done to the *whole people* of the United States, by extending to them the ignominy of a minority of the states : which have dishonoured their credit ; and, even in the repudiating and non-paying states, the circumstances related in the extracts, which we have made, go far to exonerate, a great portion of the inhabitants.

The justice of an existing generation, binding itself, or those who succeed it, to fulfil its obligations, may be practically illustrated by supposing that an individual is possessed of an estate,—the management, and the improvement, of which cost, without extravagance, a greater sum than the *estate* yields ; but which management, and outlay, is necessary to render the estate of greater value : then, undoubtedly, whoever possesses, or succeeds to, and considers it his interest to hold, such estate, becomes legally and justly bound to pay the fines, or interest, for which such estate may have been mortgaged ; or, if the estate become so productive, as to yield surplus rents, after paying the ordinary expenses of management, improvement, and cultivation ; and after paying the interest, or the amount that the estate is mortgaged for,—then such surplus should be applied judiciously, to reduce or pay off the incumbrance, or mortgage.

Should the same estate, or an estate without any incumbrance, have a powerful, and unjust neighbour, and such neighbour attempt to trespass, or injure the estate, and disturb its possessor, family, and servants ; and, that the said possessor is, in consequence, subjected to extraordinary expense, in order to preserve his estate, and repel the aggressor,—then, also, he who succeeds to, or accepts of, the estate, succeeds to, and accepts, its liabilities.

Further, if the possessor has had the privilege of carrying the produce of the said estate, by certain roads, to certain markets, and bringing back for his use, and that of his family and servants, and for the benefit of the said estate, certain commodities ; and should he, or his family or servants, be prevented carrying the said produce, and commodities, by the said road, to and from the said markets, then it becomes a question of expediency, how far he can, for the purpose of pre-

serving his privileges undisturbed, expend for the benefit and if, further necessary, to borrow money, for the use of the estate, and he who succeeds to it, become, in such case, responsible.

Should, however, the possessor of the said estate presume he would not in his adversity, or when his estate is grievously mortgaged), without himself, or his family or his markets, being attacked, interfere in the affairs of the state, and, in waging war with him, exhaust his own resources for money, to ruin or annoy his said neighbour ; it is to be seen how far the estate can afterwards bear, or disengage, upon it by the folly, profligacy, and injustice of its manager.

Such are the conditions upon which every state in the world, and every nation in the world, that has borrowed capital, are bound in regard to those who lent them money. The obligation of force and justice, whether, the money has been, discredited, or whether necessity, wisdom, or even profligacy, may require, or in its expenditure.

---

## CHAPTER XXXII

### TEXAS.

THIS extensive region, which once formed part of Mexico, and afterwards of the Mexican republic, and which, in the latter, and was acknowledged as a sovereign power in America, by England, France, Holland, and some other nations.

During the year 1845 the local government, and the people, consented to annexation with the great American confederacy, and the foreign navigation trade, and customs regulations were frequently amalgamated with those of the United States.

The probable future prospect of this magnificent region, and the rapid influx of the enterprising Anglo-Saxon race, have on the power, policy, and civil and religious institutions of Mexico, and of central, and, even, of South America, which statesmen, legislators, and philosophers are now occupied with the elements of good, and of evil,—of grandeur and of decay, of which, cannot be always free from outrage, and doubt, and great, must be the ultimate attainment, and the preservation, of liberty,—of just laws, and wise administration.

The area of Texas, not yet well defined, is, however, more than sufficiently extensive to form a separate and independent state.

Mr. Kennedy's account of Texas describes the different sections of the country in detail, and forms the most comprehensive work on this state. Several reports, and short descriptions, of Texas, have, also, been published in the United States.

The boundaries on the south-western or Mexican frontier have not been adjusted; but the government of the United States will no doubt insist on extending this boundary to Rio Grande, or Bravo del Norte; while, the Red River and a line, due north from the latter separate it from the state of Arkansas; and the river Arkansas, on the north, divides it from the western territory. The river Sabine, the limit of Louisiana, bounds Texas on the east. The extent of its maritime frontier may be variously measured. Following the courses of its lagoons, this distance is greatly extended. From point to point, along the outside, of the long sandy islands, which line the coast, and within which are the lagoons, the distance from the Sabine to the Rio Grande del Norte, has been estimated, we would say rather than measured, at about 500 English statute miles.

The area of Texas has, also, been estimated at from 310,000, to 330,000 English square miles, or much more than twice the area of the United Kingdom; and according to all accounts, no country on earth has less of its surface unfit for cultivation.

Its whole *sea coast region*, varying in breadth from 30, to 100 miles, is composed of a fertile alluvium, in which there is not, or at least rarely, a stone that would intercept the plough; and, unlike many parts of Virginia, Georgia, Florida, Alabama, and Louisiana, there are but few, and these not extensive, swamps. This region is extolled for its great capability of producing, that finest quality, Sea Island cotton. Besides which it will yield the most delicious fruits: such as peaches, olives, melons, figs, oranges, lemons, pine-apples, dates, &c., so the sugar cane, maize, and other grain. This region is well watered by numerous rivers, and streams. The greater part consists of extensive meadows, with magnificent belts of wood, along the margin of the rivers.

The *second*, or *undulated*, and *high region*, slopes down from the hills and mountains to the sea coast region, crossing the territory, and is in breadth from 120, to 180 miles. It is described as consisting chiefly of a rich, fertile, soil, covering substrata of either limestone, or sandstone, and presenting alternately woodlands, and rich grassy districts.

The *third*, or *mountainous region*, stretches upwards to the west, north-west, and from which all the rivers flow down, to the east, and south-east, into the Mexican gulf, or into the Mississippi, and its branches. Elevated table-lands spread over north-western points. None of the mountain slopes are described as too steep for agriculture; and, except in the prairies of this region, oak, pine, and other magnificent and valuable timber trees abound.

If we can depend upon descriptions, Texas is naturally, with less exceptions than any other country, capable of producing all kinds of crops and fruits:—more so than France, which has all the climates for grain:—from oats and barley, to wheat, rice, and maize,—for fruits, from the apple to the orange; for wine, the olive, the mulberry, &c. Texas has the climate, and the soil, for the sugar-cane the olive, the cotton plant, the mulberry, the melon, fig, and apple; and its pasturage has always been renowned.

THE RIVERS of Texas are numerous, and for a great extent navigable; but large vessels cannot ascend them from the sea. The great natural disadvantage of Texas, in common with the whole eastern sea coast of Mexico, is the want of good harbours. Humboldt observes, “The intendency of San Luis comprehends more than 230 leagues of sea coast, but without commerce and without activity. That part which extends from the Rio Grande del Norte, to the river Sabine is almost still unknown, and has never been examined by navigators.”

This coast would have probably still continued to be “unknown and without commerce and activity,” had it remained under the intendency of San Luis, or under the non-enterprising Spanish-Mexicans; and if it had never been entered, or traversed, by the Anglo-Saxon race, who were invited into Texas by the Emperor Iturbide: not to establish its independence, but to defend it from Spain. The Anglo-Saxons were invited into Texas, under nearly like circumstances as Hengist and Horsa were invited into Britain, and the result has been similar.

The rivers SABINE and NECHES fall into the Sabine lagoon. The Sabine was obstructed by a raft, and deemed impassable; but it was removed by the government of the United States, and the river was then (1837) navigated by a steamboat 125 feet long, drawing six feet water. Since 1839 one or more steamboats navigate this river, from its mouth to the upper settlements. The Sabine, like most of the Texan rivers, periodically overflows its banks, and fertilises the soil. It has several small tributaries.

The NECHES, which is navigable for small steamboats for about 100 miles, flows also into the Sabine lagoon; the passage over the muddy bar, at the entrance into this lagoon from the gulf, only admits small vessels.

The next inlet is GALVESTON, which spreads into two large bays, or lagoons, and the eastern entrance will admit vessels drawing about twelve and a half feet water. TRINIDAD river falling into it may, it is said, be ascended, by steamboats, for from three to four hundred miles from its mouth. It is rapid, and from eight to ten feet deep. At the western extremity of Galveston Island is SAN LUIS harbour. The passage, over its bar, is stated to be somewhat deeper than that of Galveston. A few leagues west, of San Luis, the BRAZOS DE DIOS flows across a shifting sand-bar, over which there is only six to eleven feet depth of water.

Mr. Kennedy says, the Brazos is exceedingly well adapted for steam navigation. Opposite Velasco (at its mouth) its width is about 170 yards, and for 500 miles it varies from 150 to 200 yards." After heavy rains it swells into a torrent. In ordinary seasons its banks, twenty to forty feet high, are overflowed. Like the Red river, its waters are coloured red, with earthy particles, carried down from the plains. It is navigated by several steam vessels, and has numerous tributaries. The first colonists from the United States made *San Felipe*, 150 miles up this river, their head-quarters.

MATAGORDA BAY is a lagoon, sixty miles long, and from six to ten miles broad: the entrance, *Paso Cavallo*, from the gulf, has only from eight to nine feet water on its bar: within it is safe and deep.

The COLORADA, or TEXAS, falls into this inlet by two branches. It has steep banks, which are seldom overflowed. Its navigation is interrupted by a raft; but if not already, it will, no doubt, soon be removed by the government. The river will then be found navigable, for steamers, more than 200 miles. Many of its tributaries are navigable. Several rivers fall into La Baca Bay, a branch of Matagorda. The *La Baca*, and *Novida*, are navigable, about thirty miles for steamers.

The large inlet, forming the bays of ESPIRITU SANTO, ARANSAS, and COMPANO, are separated from the gulf, by two long islands, Matagorda, and St. Joseph. The *Aransas* passage from the gulf is not more than seven to eight feet deep over the bar. The bay is also shallow, and the river *Guadaloupe*, and the *Vuences*, and other streams, which fall into these bays, are described as not deep, but capable of being rendered advantageous, for bringing down the produce of the upper countries to the sea, in vessels requiring only a light draft of water.

CORPUS CHRISTI and the LAGUNA DEL MADRE, form an inlet, about 100 miles long, within three long islands, separated by narrow passages. The bay of Corpus Christi extends, inland, about forty miles, north and south. The *Rio de las Mucas*, which falls into this bay, is a long, rapid river, navigable for small boats for about forty miles.

The LAGUNA DEL MADRE, though so long, and from five to six miles in breadth, is shallow, and the water in many places is not more than from eight, to eighteen, inches deep. The *Barra del Santiago*, or the outer inlet from the gulf into the lagoon, has from six to seven feet water over the bar, and small vessels with merchandise frequently enter, and discharge.

The mouth of the RIO GRAND DEL NORTE, is separated by a narrow neck of land from the *Barra del Santiago* by a narrow isthmus. The entrance to this large river, from the gulf, has no greater depth of water than from three to five feet over its shifting bar. For 200 miles upwards, its current is described as smooth and deep, to Laredo, where rapids commence.

The CLIMATE OF TEXAS is described as mild and salubrious. Not subject

to yellow fever, or pulmonary consumption. The *land* believe to be only imperfectly known. Bituminous the interior. Gold and silver are also asserted to *abundant* tainous country; and specimens of both have been *found* be plentifully distributed; and copper, lead, and *other* discovered in considerable quantities. Excellent *in* all parts except the sea coast region. There are large and as, it is by all admitted, that, the soil, and climate in any country, as there is sufficient timber and mine *resources* bours appears to be the only great natural disadvantage America: which has, until the last few years, remained *less* than it could have been when Mexico was conquered.

## HISTORICAL ABSTRACT.\*

On the 17th of January, 1821, Moses Austin, a *Texan* tained permission, from the supreme government of *the* vinces of Mexico, to introduce three hundred families into Texas.

In consequence of Moses Austin's death, his *project* up, and prosecuted, by his son Stephen, who was *opposed* authorities of revolutionized Mexico, for confirmation *of* been conceded to his father, by the authorities of *the* January, 1823, a colonization law, approved by the *law* was promulgated; and on the 18th of February of *that* cree was issued, empowering Austin to found a *company* the general law.

A revolutionary movement having displaced *the* which succeeded him having decreed the nullity of *the* was constrained to solicit the confirmation of his *compact* Mexico. This he obtained on the 14th of April, 18 *24* recorded as the legal date of the commencement of *the* in Texas.

To encourage the settlement of her waste frontier *and* a barrier against Indian aggression, and strengthen *the* tempts at reconquest, Mexico held out various *incentives* nists of Texas; and, among them, a temporary *exemption* exert.

By article 24 of the Mexican colonization law of *1824* was enacted, that, during six years from the date of *its* should not pay tithes, or duties, on their produce, *except* of a public kind.

\* Chiefly from a compilation by Mr. *W. H. Burdett*.

By article 25, of the same law, it was enacted, that during the six years immediately succeeding the termination of the first specific period the colonists should pay half the tithes and half the contributions, direct and indirect, that were paid by native citizens.

These enactments emanated from *the general government of Mexico*.

The united state of Coaguila and Texas, as a member of the Mexican Federation, by article thirty-two, of a colonisation law, passed by its legislature on the 24th of March, 1825, ordained that during the first ten years—reckoning from the commencement of the settlement—colonists, within the limits, of the state should be free from any kind of public contribution, except such as were generally demanded to prevent, or repel, invasion. After ten years, new settlers were to bear an equal proportion of the public burdens with native citizens.

The law containing these provisions was repealed by an act, dated the 28th of April, 1832, which exempted "all new towns" for ten years, from the time of their foundation, from every description of tax, except contributions for defence against foreign invasion. For the site of each of these "new towns," the state appropriated four square leagues of land.

The establishment of custom-houses in Texas, and of garrisoned posts, to enforce the collection of the national revenue, which followed the periods of exemption from taxation granted to the infant settlements, formed, with the colonists, prominent causes of dissatisfaction; while, on the other hand, the inaction of its fiscal enactments, was regarded by the government of Mexico as ingrateful, and rebellious, on the part of men invited, by its liberality, to occupy its fertile lands. The colonists were refractory. In June, 1832, a party of them attacked and captured, the Mexican garrison, at the port of Velasco—in April, 1833, petitions complaining of the tariff, and praying for the privilege of free importation, for a term of three years, of the most important articles of consumption, were transmitted by the colonists to the general government. In the autumn of 1834, a number of persons seized the collector of customs, at Anahuac, and expelled the military stationed at that post—and, in the autumn of 1835, the Anglo-Americans in Texas and Mexico were in a state of declared war.

In November, 1835, an Anglo-American convention was held in Texas, and a provisional government proclaimed, which conferred on a governor and council the power "to impose and regulate impost and tonnage duties, and to provide for their collection under such regulations as might be deemed expedient."

An ordinance of this provisional government, imposing certain duties of customs, passed on the 12th of December, 1835, was repealed by another ordinance on the 27th of the same month, which placed a duty of twenty-five per cent, *ad valorem*, on such goods, wares, and merchandise, as were "entitled to a debenture" in the port of shipment, and a duty of fifteen per cent, *ad valorem*, on such as were not entitled to debenture. Articles imported, *bonâ fide*, for the

use of emigrants, including farming implements, household stores and machinery of all kinds, were to be admitted.

The declaration and establishment of the independence, the adoption of a constitution, by its inhabitants, were followed by a Congress, which, on the 20th of December, 1836, passed a revenue by impost duties," under which the following

On the invoice value of wines, spirituous and vinous liquors, ad valorem; silk goods, and all manufactures of silk, 50 per cent, ad valorem; and coffee, 2½ per cent, ad valorem; teas, 25 per cent, ad valorem; iron and castings, 10 per cent, ad valorem; iron and castings, 10 per cent, ad valorem; clothing, shirtings, shoes, blankets, kerseys, satins, mixtures of cotton and wool, 10 per cent, ad valorem; goods and manufactures, an ad valorem duty of 25 per cent on invoice value.

Another and more comprehensive customs law was passed in June, 1837, "for the purpose of raising a revenue to defray the expenses, sustaining the public credit, and securing the annual, or semi-annual, interest on the shares of stock."

The tariff underwent a farther revision by an act passed in February, 1840.—(*See the late tariff of Texas, subject to the States.*)

It is to be observed that the receipt of duties, when issued, on an unsound basis—and, of course, repeated from time to time, caused the tariff to appear much higher than the successive endeavours, to realise, amidst the fluctuations of a spurious currency, an adequate tangible revenue, has imparted a character to the fiscal legislation of the republic, disastrous to the merchant and the emigrant. The duties, at present levied on gold and silver, at their market value.

More than two-thirds of the revenue from customs is derived from the port of Galveston. The eastern counties of Texas, with their dense population, contribute but a small proportion to the revenue, owing to their geographical position, which secures exemption from duty. The gross amount received at the port of Galveston, for the year ending on the 1st of December, 1842, was, in round numbers, about 1,000,000 dollars, for the same period at Brazos, Matagorda, Red River, and the Gulf of Mexico, at 30,000 dollars. The average expense of collection is about fourteen per cent.

All attempts hitherto made to raise a revenue by duties on imports, have been unsuccessful.

The laws for regulating the general trade of Texas, and the tariff, are now the same as those of the United States.

local regulations are continued in force, until changed under the state constitution and legislature of the state of Texas.

The following laws may be considered as remaining in force :

**HOSPITAL AT GALVESTON.**—By an act approved by the president on the 3rd of February, 1845, for the establishment of a hospital at Galveston, it is provided that, from and after the 1st of May next ensuing, “the commander of every vessel arriving at the port of Galveston shall be required to pay to the collector of customs at that port the sum of 50 cents for every foreign white male cabin passenger over sixteen years of age, and twenty-five cents for every white male steerage passenger over sixteen years of age, according to the list of passengers produced by the said commander, or his clerk, which list shall be sworn to.”

**CHAMBER OF COMMERCE AT GALVESTON.**—By an act approved by the president, 3rd of February, 1845, a corporate body was created under the style and title of “The Galveston Chamber of Commerce,” an institution which, according to the preamble of the act, “is much required by the mercantile community, as tending to diminish litigation and to establish uniform and equitable charges.”

It is provided that the act of incorporation shall “be in force for and during the space of twenty years from the passage thereof, and take effect from and after its passage.

**LAW PROCEEDINGS.**—An Act supplementary to “an Act to regulate Proceedings in Civil Suits.” This act provides that, from and after the 27th of June, 1845, “in all suits brought to recover the price or value of any goods, wares, or merchandise imported, or notes given for the same, the fact that such goods, wares, or merchandise, were imported or introduced into the republic without payment of the lawful duties, or in violation of any revenue law thereof, may be pleaded in defence, and if established, shall constitute a legal and valid defence in all such cases.” It is further provided that, “In cases where such defence shall be pleaded”—and also in cases—“when any civil action shall hereafter be brought to recover duties not paid, the party so charged, or unpleaded, shall not be liable to any criminal prosecution for the same offence on non-payment.”

**WRECK-MASTERS.**—An Act “to amend an Act passed the 8th of January, 1841, respecting wreck-masters,” approved by the president February 3rd, 1844, provides—

“That from and after its passage, the wreck-masters of the republic shall be appointed by the president of the republic, and controlled by the collectors of customs of the several maritime districts, who shall each appoint for his district at least one, and not more than three wreck-masters ; and it shall be the duty of each of these person so appointed to attend, in the manner set forth in the act to which this is an amendment—to the saving and disposing of all property wrecked

in his district, or in the part of it allotted to him, if such property be declared to be abandoned by its owner, or the agent, or factor for the same; or be found abandoned, no such person appearing.

“That it shall not be lawful for the wreck-master to recover out of the proceeds of any wrecked property sold by him as wreck-master, an auctioneer’s commission, or any other in addition to that allowed in the act aforesaid; but he shall be allowed to charge for the services and mileage of a crier, at a rate which shall be fixed by the collector of the district.

“That, in order to award the rate or amount of salvage, on property wrecked, one arbitrator shall be appointed by the wreck-master, on behalf of the salvor, and one by the owner of the property salvaged, or the agent, or factor, for the same, or, default of those, by the chief justice of the county in which the wreck happens.—And the wreck-masters, before appointing an arbitrator, shall notify the salvors of such intent, and if a majority of the whole number of salvors shall request him to appoint any individual named and agreed on by them, as arbitrators, for the salvors, the said wreck-master shall so appoint such individual, and in case of the arbitrators not agreeing, they shall choose an umpire, who shall decide between them—his awardment not being higher than the rates, or amounts awarded by the two arbitrators;—and, from the decision of the arbitration, an appeal to the Court of Admiralty may be taken by either of the parties, or by any portion of either, if the amount in question be such as by law would entitle the party to appeal from a magistrate to a district court;\* but, in such case, the party appealing must notify the opposite party of such intention, within two days after the awardment appealed from is made known—otherwise the right to appeal shall be forfeited; and where an appeal is taken it shall not impede the sale of the property wrecked.

“Finally—That it shall be the duty of all wreck-masters, in whose district any wreck may occur, to publish, or cause to be published, either in some public journal in said district, or by affixing to the doors of at least three several public places in said district, a written or printed notice, with a description of property offered at said wreck-master’s sale, at least ten days previous to the aforesaid sale.

“This act to take effect from and after its passage.”

\* By an act of Congress, passed January 19th, 1841, an appeal may be had from the decision of a magistrate to the district court, where the sum in controversy shall exceed twenty dollars.

**Gross Return of British and Foreign Trade within the Consulate of Galveston, during the  
Year ending December 31, 1844.**

REMARKS.—Three of the vessels classed by the custom-house under the head of "Bremen," were Hanoverian; chartered at Embden, for Bremen use. The demand for cotton exceeding the supply, some European vessels were obliged to leave Galveston without cargo. The vessels classed "Belgian," and four of the vessels classed "Bremen," conveyed emigrants to Texas. The British ships brought no emigrants.

No account of the crews of ships entering the port of Galveston is kept by the local authorities; the return, therefore, is, in this particular, incomplete.

\* Average rate of exchange, 10s.

The following is a statement relative to its previous debt, revenue, and trade, compiled by Mr. J. P. Kettel; also from official returns.

**PUBLIC Debt of Texas.**

D E B T.	Term.	Amount.	Amount.	Amount.
		dollars.	dollars.	dollars.
Funded act of 1837.....	1841	780,000	325,000	1,065,000

Total debt.....	....	7,990,000	1,079,000	8,168,000

According to a congressional report of 1839, the quantity of government land was as follows:

L A N D.	Acres.	Acres.
	number.	number.
Extent of the Texian republic.....	....	303,420,000
Granted by Mexico, and confirmed by Texas.....	53,311,247	
Texas grants, since her independence.....	5,997,356	
Military bounty lands.....	4,283,074	
Land scrip issues.....	1,500,000	
		64,801,727
Unappropriated balance.....	....	138,618,203

The imports and exports of the United States, to and from Texas, have been as follow :—

## IMPORTS and Exports to and from Texas.

Y E A R S.	Exports to Texas.		TOTAL.	Imports.
	Domestic Goods.	Foreign Goods.		
	dollars.	dollars.	dollars.	dollars.
1837 .....	797,312	210,616	1,007,928	162,284
1838 .....	1,629,818	219,062	1,847,880	165,719
1839 .....	1,879,016	308,017	1,687,083	318,116
1840 .....	937,073	281,199	1,218,271	383,547
1841 .....	516,255	292,041	808,296	383,688
1842 .....	278,978	127,951	406,929	489,889
1843 .....	705,240	87,713	142,753	445,289

The largest exports to Texas were in 1839, and consisted mostly of clothing, furniture, lumber, and dry goods, of which over 250,000 dollars was domestic cottons. A large portion of their exports consisted, undoubtedly, of the property of emigrants; but they seem now to supply themselves from other quarters, the United States having lost the trade. In the mean time, the exports of Texas, consisting of cotton almost altogether, have rapidly increased. The quantity and value brought into the United States, in each year, have been as follows :—

## IMPORTS of Cotton into the United States, from Texas.

Y E A R S.	Pounds.	Value.	Y E A R S.	Pounds.	Value.
	number.	dollars.		number.	dollars.
1836 .....	1,472,133	232,286	1840 .....	2,609,635	222,192
1837 .....	1,092,466	144,587	1841 .....	3,128,776	278,315
1838 .....	1,401,293	156,242	1842 .....	5,355,142	406,940
1839 .....	1,898,052	230,130	1843 .....	7,593,107	579,739

This shows a regular and steady increase of business, apparently largely in favour of Texas. The imports and duties for the port of Galveston, for the year ending November 1, are as follows :—

IMPORTS AND DUTIES.	1842	1844	Increase.
	dollars.	dollars.	dollars.
Imports .....	263,532	819,399	161,867
Duties .....	82,042	158,815	69,773

The revenue and expenditure are as follow :—

Revenue .....	dollars.
Expenses .....	466,156
Excess revenue .....	409,289
	5,949

By the "Annual Report of the Treasury Department, to the ninth Congress of the Republic of Texas," dated "Washington, December 1, 1844," and signed "J. B. Miller, Secretary of the Treasury;" it appears that during the year ending on the 31st of July, 1844, 130 vessels entered the ports of Texas from foreign ports, or with cargoes subject to duty.

Amount of merchandise imported .....	dols. cts.	dols. cts.
Total gross amounts of revenue .....	291,413 28	696,398 28
Expenses of collection .....	22,861 45	
Net amount of revenue .....	177,651 83	

The rate of per centage which the gross amount of impost duties bears to the total amount of merchandise imported, is above twenty-six and a half per cent.

Official statement of revenue collected at the Custom-house, port of Galveston, for the year commencing November 1, 1843, and ending October 31, 1844 :—

Total amount subject to specific duty.....	180,847	88
"                    "            ad valorem duty.....	378,325	06

**TREATIES OF COMMERCE AND NAVIGATION BETWEEN THE UNITED STATES AND  
FOREIGN STATES.**

THE first treaty of commerce and amity, which was negotiated by the United States, was with Holland in 1778, and led to declaration of war by England against the latter country. After the peace of 1783, treaties of peace and amity were negotiated between the United States and various foreign countries. It would be tedious and useless to enumerate all these treaties. According to a report published (April, 1840) by the Department of State of the United States, in obedience to a resolution adopted by the Senate at the last session of Congress, showing the nature and extent of the privileges and restrictions of the commercial intercourse of the United States with foreign nations, it is stated that twelve nations, viz., Austria,

**Brazil, Central America, Denmark, Ecuador, Greece, Russia, Sardinia, Sweden, and Venezuela, have met in a spirit of liberality. In the ports of all these with their cargoes, whether the produce of the United States or not, they are entitled to the same drawback or bounty as the vessels of those countries bound, they are entitled to the same drawback or bounty as domestic vessels are. The report then observes,**

“ With Great Britain, France, the Netherlands, Mexico relations are of a more restricted character. These nations are of equality to the *direct trade*. That is to say, Great Britain opens her United States into her ports on payment of the same tonnage as British vessels, with these conditions : First, that the vessels be United States, and navigated by a master and crew, three-fourths of the United States; and second, that the goods composed of United States, which in practice limits the import trade between one country and the other. The trade of the United States possessions is regulated by treaty stipulations or by direct trade cases, however, some restrictions are observed, giving an equality to British bottoms. The importation from the United States of foreign produce is mostly prohibited.

"France admits the vessels of the United States into her ports on a discriminatory duty of five francs, or ninety-four cents, per ton, for French vessels. In the importation of articles, the preference is made between French and American vessels; but the discriminating duty prevails in favour of French bottoms."

"In the Java trade, under the government of the Netherlands, the United States, and of other countries, are admitted at 10 per cent ad valorem, if imported in Dutch vessels, and 15 per cent ad valorem, if imported in vessels belonging to the United States."

“Chili and the Ottoman dominions admit our vessels  
ing of the most favoured nations, reserving the privilege  
own. Five Powers, viz., the Argentine confederation,  
Grenada, Portugal Spain, the Two Sicilies, and Uruguay  
commerce and the navigation of the United States as they  
other check than our countervailing legislative provisions.  
Belgium, Portugal, and the two Sicilies, negotiations are  
commercial treaties.”

Since the publication of that report, treaties of na  
been ratified between the United States and the follc  
Belgium, Hanover, and Portugal.

TREATIES OF COMMERCE AND NAVIGATION BETWEEN  
AND THE UNITED STATES

Treaties of peace and amity between the United States, and for the suppression of the slave trade the United States stipulates with England to consider that trade times been concluded. The following treaties contain upon for regulating the trade and navigation between the United Kingdom and British dominions.

The treaty of commerce of the 3rd of July, 1815 has been interrupted by absurdly conceived British orders in council, and president's proclamations; but that treaty and other conventions, now in force, are those under which the trading intercourse between both countries is regulated.

*Convention of Commerce between Great Britain and the United States. Signed at London, 3rd July, 1815. Renewed by Convention signed at London, 6th of August, 1827.*

I. There shall be between all the territories of his Britannic Majesty in Europe, and the territories of the United States, a reciprocal liberty of commerce. The inhabitants of the two countries respectively shall have liberty freely and securely to come with their ships and cargoes to all such places, ports, and rivers in the territories aforesaid, to which other foreigners are permitted to come, to enter into the same, and to remain and reside in any parts of the said territories respectively; also to hire and occupy houses and warehouses for the purposes of their commerce; and generally the merchants and traders of each nation respectively shall enjoy the most complete protection and security for their commerce; but subject always to the laws and statutes of the two countries respectively.

II. No higher or other duties shall be imposed on the importation into the territories of his Britannic Majesty in Europe, of any articles the growth, produce, or manufacture of the United States, and no higher or other duties shall be imposed on the importation into the United States, of any articles the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country, produce, or manufacture of either country respectively, the amount of the said drawbacks shall be the same whether the said goods shall have been originally imported in a British or American vessel; but when such re-exportation shall take place from the United States in a British vessel, or from the territories of his Britannic Majesty in Europe in an American vessel, to any other foreign nation, the two contracting parties reserve to themselves, respectively, the right of regulating or diminishing, in such case, the amount of the said drawback.

The intercourse between the United States and his Britannic Majesty's possessions in the West Indies, and on the continent of North America, shall not be affected by any of the provisions of this article, but each party shall remain in the complete possession of its rights, with respect to such an intercourse.

III. His Britannic Majesty agrees that the vessels of the United States of America shall be admitted, and hospitably received, at the principal settlements of the British dominions in the East Indies, viz., Calcutta, Madras, Bombay, and Prince of Wales's Island, and that the citizens of the said United States may freely carry on trade between the said principal settlements and the said United States, in all articles of which the importation and exportation, respectively, to and from the said territories, shall not be entirely prohibited: provided only, that it shall not be lawful for them in any time of war between the British government and any state or power whatever, to export from the said territories, without the special permission of the British government, any military stores, or naval stores, or rice. The citizens of the United States shall pay for their vessels, when admitted, no higher or other duty or charge than shall be payable on the vessels of the most favoured European nations, and they shall pay no higher or other duties or charges on the importation or exportation of the cargoes of the said vessels, than shall be payable on the same articles when imported or exported in the vessels of the most favoured European nations.

But it is expressly agreed, that the vessels of the United States shall not carry any articles from the said principal settlements to any port or place, except to some port or place in the United States of America, where the same shall be unladen.

It is also understood, that the permission granted by this article is not to extend to allow the vessels of the United States to carry on any part of the coasting trade of the said British territories, but the vessels of the United States having, in the first instance, proceeded to one of the said principal settlements of the British dominions in the East Indies, and then going with their original cargoes, or any part thereof, from one of the said principal settlements to another, shall not be considered as carrying on the coasting trade. The vessels of the United States may also touch, for refreshment, but not for commerce, in the course of their voyage to or from the British territories in India, or to or from the dominions of the Emperor of China, at the Cape of Good Hope, the island of St. Helena, or such other places as may be in the possession of Great Britain, in the African or Indian seas; it being well understood that in all that regards this article the citizens of the United States shall be subject, in all respects, to the laws and regulations of the British government, from time to time established.

IV. It shall be free for each of the two contracting parties, respectively, to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party; but before any consul shall act as such, he shall in the usual form be approved and admitted by the government to which he is sent; and it is hereby declared, that in case of illegal or improper conduct towards the laws or government of the country to which he is sent, such consul may either be punished according to law, if the laws will reach the case, or be sent back, the offended government assigning to the other the reasons for the same.

It is hereby declared, that either of the contracting parties may except from the residence of consuls such particular places as such party shall judge fit to be so excepted.

V. This convention, when the same shall have been duly ratified by his Britannic Majesty and by the president of the United States, by and with the advice and consent of their senate, and the respective ratifications mutually exchanged, shall be binding and obligatory on his Majesty and on the said United States for four years from the date of its signature; and the ratifications shall be exchanged in six months from this time, or sooner if possible.

*Convention between Great Britain and the United States. Signed at London, the 20th of October, 1818; renewed by Convention, Signed at London, the 6th of August, 1827.*

I. Whereas differences have arisen respecting the liberty claimed by the United States, for the inhabitants thereof, to take, dry, and cure fish, on certain coasts, bays, harbours, and creeks, of his Britannic Majesty's dominions in America, it is agreed between the high contracting parties, that the inhabitants of the said United States shall have, for ever, in common with the subjects of his Britannic Majesty, the liberty to take fish of every kind, on that part of the southern coast of Newfoundland which extends from Cape Ray to the Rameau Islands, on the western and northern coast of Newfoundland, from the said Cape Ray to the Quirpon Islands, on the shores of the Magdalen Islands, and also on the coasts, bays, harbours, and creeks, from Mount Joly, on the southern coast of Labrador, to and through the straits of Belleisle, and thence northwardly indefinitely along the coast, without prejudice, however, to any of the exclusive rights of the Hudson's Bay Company: and that the American fishermen shall also have liberty, for ever, to dry and cure fish in any of the unsettled bays, harbours, and creeks, of the southern part of the coast of Newfoundland hereabove described, and of the coast of Labrador; but so soon as the same, or any portion thereof, shall be settled, it shall not be lawful for the said fishermen to dry or cure fish at such portion so settled, without previous agreement for such purpose, with the inhabitants, proprietors, or possessors of the ground. And the United States hereby renounce for ever any liberty heretofore enjoyed or claimed by the inhabitants thereof, to take, dry, or cure fish, on or within three marine miles of any of the coasts, bays, creeks, or harbours of his Britannic Majesty's dominions in America, not included within the abovementioned limits:

provided, however, that the American fishermen shall be admitted to enter such bays or harbours, for the purpose of shelter and of repairing damages therein, of purchasing wood, and obtaining water, and for no other purpose whatever. But they shall be under such restrictions as may be necessary to prevent their taking, drying, or curing fish therein, or in any other manner whatever abusing the privileges hereby reserved to them.

*Act of Congress "concerning the Convention to regulate the Commerce between the Territories of the United States and his Britannic Majesty." Approved the 1st of March, 1816.*

Be it enacted and declared by the Senate and House of Representatives of the United States of America in Congress assembled, that so much of any act as imposes a higher duty of tonnage or of impost, on vessels, and articles imported in vessels, of Great Britain, than on vessels, and articles imported in vessels, of the United States, contrary to the provisions of the convention between the United States and his Britannic Majesty, the ratifications whereof were mutually exchanged the 22nd day of December, 1815, be, from and after the date of the ratification of the said convention, and during the continuance thereof, deemed and taken to be of no force or effect.

*Act of the British Parliament "to carry into effect a Convention of Commerce concluded between his Majesty and the United States of America, and a Treaty with the Prince Regent of Portugal."*

VI. And whereas it is expedient that vessels built in the countries belonging to the United States of America, or any of them, or condemned as prize there, and being owned and navigated as herein-before mentioned, should be allowed to clear out from any part of the United Kingdom for the principal settlements of the British dominions in the East Indies; viz., Calcutta, Madras, Bombay, and Prince of Wales's Island, with any articles which may legally be exported from the United Kingdom to the said settlements in British-built ships; be it therefore further enacted, that all vessels built in the said United States of America, or any of them, or condemned as prize there, and being owned and navigated as hereinbefore mentioned, shall be allowed to clear out from any port of the United Kingdom for the following principal settlements of the British dominions in the East Indies, viz., Calcutta, Madras, Bombay, and Prince of Wales's Island, with any goods, wares, or merchandise which may be legally exported from the United Kingdom to the said settlements in British-built vessels, subject to the like rules and regulations, restrictions, penalties, and forfeitures as are now by law imposed upon the exportation of such goods to the said settlements in British-built ships, any law, custom, or usage to the contrary notwithstanding.

VII. And be it further enacted, that nothing in this act contained shall extend, or be construed to extend to repeal or in anywise alter the duties of package, scavage, bailage, or portage, or any other duties payable to the mayor and commonalty, and citizens of the city of London, or to the Lord Mayor of the said city for the time being, or to any other city or town corporate within Great Britain, or any other special privilege or exemption to which any person or persons, bodies politic or corporate, is or are now entitled by law in respect of goods imported and exported, but the same shall be continued as heretofore.

*Convention of Commerce, signed at London, August 6, 1827.*

ART. I.—All the provisions of the convention concluded between his Majesty the King of the United Kingdom of Great Britain and Ireland, and the United States of America, on the 3rd of July, 1815, and further continued for the term of ten years by the fourth article of the convention of the 20th of October, 1818, with the exception therein contained as to St. Helena, are hereby further indefinitely, and without the said exception, extended and continued in force, from the date of the expiration of the said

ten years, in the same manner as if all the provisions of the said convention of the 3d of July, 1815, were herein specifically recited.

ART. II.—It shall be competent, however, to either of the contracting parties, in case either should think fit, at any time after the expiration of the said ten years—that is, after the 20th of October, 1828—on giving due notice of twelve months to the other contracting party, to annul and abrogate this convention; and it shall, in such case, be accordingly entirely annulled and abrogated, after the expiration of the said term of notice.

*Act of Congress of the United States, "to repeal the Tonnage Duties upon Ships and Vessels of the United States, and upon certain Foreign Vessels." 31st May, 1830.*

SEC. I.—Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, that, from and after the 1st day of April next, no duties upon tonnage of the ships and vessels of the United States, of which the officers and two-thirds of the crew shall be citizens of the United States, shall be levied or collected; and all acts and parts of acts imposing duties upon the tonnage of ships and vessels of the United States, officered and manned as aforesaid, so far as the same relate to the imposition of such duties, shall, from and after the said first day of April next, be repealed.

SEC. II.—And be it further enacted, that, from and after the said 1st day of April next, all acts and parts of acts imposing duties upon the tonnage of the ships and vessels of any foreign nation, so far as the same relate to the imposition of such duties, shall be repealed: provided, that the President of the United States shall be satisfied that the discriminating or countervailing duties of such foreign nation, so far as they operate to the disadvantage of the United States have been abolished.

[Approved 31st of May, 1830.]

*Proclamation of the President of the United States, opening to British Vessels the Trade between the British Colonial Possessions and the American Ports. 5th October, 1830.*

Whereas, by an act of the Congress of the United States, passed on the 29th day of May, 1830, it is provided, that whenever the President of the United States shall receive satisfactory evidence that the government of Great Britain will open the ports in its colonial possessions in the West Indies, on the continent of South America, the Bahama Islands, the Caicos, and the Bermuda or Somer Islands, to the vessels of the United States, for an indefinite or for a limited term; that the vessels of the United States, and their cargoes, on entering the colonial ports aforesaid, shall not be subject to other or higher duties of tonnage or impost, or charges of any other description, than would be imposed on British vessels, or their cargoes, arriving into the said colonial possessions, from the United States; that the vessels of the United States may import into the said colonial possessions, from the United States, any article or articles which could be imported in a British vessel into the said possessions, from the United States; and that the vessels of the United States may export from the British colonies afore-mentioned, to any country whatever, other than the dominions or possessions of Great Britain, any article or articles that can be exported therefrom in a British vessel, to any country other than the British dominions or possessions as aforesaid—leaving the commercial intercourse of the United States, with all other parts of the British dominions or possessions, on a footing not less favourable to the United States than it now is; that then, and in such case, the President of the United States shall be authorised, at any time before the next session of Congress, to issue his proclamation, declaring that he has received such evidence, and that thereupon, and from the date of such proclamation, the ports of the United States shall be opened indefinitely, or for a term fixed, as the case may be, to British vessels coming from the said British colonial possessions, and their cargoes, subject to no other or higher duty of tonnage or impost, or charge of any description whatever, than would be levied on the vessels of the United States, or their cargoes, arriving from the said British possessions; and that it shall be lawful for the said British vessels to import into the United States, and to export therefrom, any article or articles which

may be imported or exported in vessels of the United States; and that the act, entitled, "An Act concerning navigation," passed on the 18th day of April, 1818, an act supplementary thereto, passed the 15th day of May, 1820, and an act, entitled, "An Act to regulate the commercial intercourse between the United States and certain British ports," passed on the 1st day of March, 1823, shall, in such case, be suspended or absolutely repealed, as the case may require:

And whereas, by the said act, it is further provided, that whenever the ports of the United States shall have been opened under the authority thereby given, British vessels and their cargoes shall be admitted to an entry in the ports of the United States, from the islands, provinces, or colonies of Great Britain, on or near the North American continent, and north or east of the United States.

And whereas satisfactory evidence has been received by the President of the United States, that, whenever he shall give effect to the provisions of the act aforesaid, the government of Great Britain will open, for an indefinite period, the ports in its colonial possessions in the *West Indies*, on the continent of *South America*, the *Bahama Islands*, the *Caiques*, and the *Bermuda* or *Somer Islands*, to the vessels of the United States, and their cargoes, upon the terms, and according to the requisitions of the aforesaid act of Congress:

Now, therefore, I, Andrew Jackson, President of the United States of America, do hereby declare and proclaim, that such evidence has been received by me; and that by the operation of the act of Congress, passed on the 29th day of May, 1830, the ports of the United States are, from the date of this proclamation, open to British vessels coming from the said British possessions, and their cargoes, upon the terms set forth in the said act; the act entitled, "An Act concerning navigation," passed on the 18th day of April, 1818, the act supplementary thereto, passed the 15th day of May, 1820, and the act, entitled, "An Act to regulate the commercial intercourse between the United States and certain British ports," passed the 1st day of March, 1823, are absolutely repealed; and British vessels and their cargoes, are admitted to an entry in the ports of the United States, from the islands, provinces, and colonies of Great Britain, on or near the North American continent, and north or east of the United States.

Given under my hand, at the city of Washington, the 5th day of October, in the year of our Lord 1830, and the 55th of the independence of the United States.

By the President:

ANDREW JACKSON.

M. VAN BUREN,  
Secretary of State.

*British Order in Council, for regulating the Commercial Intercourse between the United States and the British Colonial Possessions. 5th November, 1830. At the Court of St. James's, the 5th day of November, 1830. Present, the King's most excellent Majesty in Council.*

Whereas by a certain act of parliament, passed in the sixth year of the reign of his late majesty, King George the IVth [cap. 114.], entitled, "An Act to regulate the Trade of the British Possessions Abroad," after reciting that, "by the law of navigation, foreign ships are permitted to import into any of the British possessions abroad, from the countries to which they belong, goods, the produce of those countries, and to export goods from such possessions, to be carried to any foreign country whatever, and that it is expedient that such permission should be subject to certain conditions;" it is, therefore, enacted, "that the privileges thereby granted to foreign ships shall be limited to the ships of those countries which, having colonial possessions, shall grant the like privileges of trading with those possessions to British ships, or which, not having colonial possessions, shall place the commerce and navigation of this country, and of its possessions abroad, upon the footing of the most favoured nation, unless his majesty, by his order in council, shall, in any case, deem it expedient to grant the whole, or any of such privileges, to the ships of any foreign country, although the conditions aforesaid shall not in all respects be fulfilled by such foreign country."

And whereas by a certain order of his said late majesty in council, bearing date the 27th day of July, 1826, after reciting, that the conditions mentioned and referred to in the said act of parliament had not in all respects been fulfilled by the government of the United States of America, and that, therefore, the privileges so granted as aforesaid by the law of navigation to foreign ships, could not lawfully be exercised or enjoyed by the ships of the United States aforesaid, unless his majesty, by his order in council, should grant the whole or any of such privileges to the ships of the United States aforesaid: his said late majesty did, in pursuance of the powers in him vested by the said act, grant the privileges aforesaid to the ships of the said United States; but did thereby provide and declare that such privileges should absolutely cease and determine in his majesty's possessions in the West Indies and South America, and in certain other of his majesty's possessions abroad, upon and from certain days in the said order appointed, for that purpose, and which are long since passed:

And whereas, by a certain other order of his said late majesty in council, bearing date the 16th of July, 1827, the said last-mentioned order was confirmed; and whereas, in pursuance of the acts of parliament, in that behalf made and provided, his said late majesty, by a certain order in council, bearing date the 21st day of July, 1823, and by the said order in council bearing date the 27th day of July, 1826, was pleased to order, that there should be charged on all vessels of the said United States, which should enter any of the ports of his majesty's possessions in the West Indies or America, with articles of the growth, produce, or manufacture, of the said states, certain duties of tonnage and of customs therein particularly specified:

And whereas it hath been made to appear to his majesty in council, that the restrictions heretofore imposed by the laws of the United States aforesaid, upon British vessels, navigated between the said states and his majesty's possessions in the West Indies and America, have been repealed, and that the discriminating duties of tonnage and customs heretofore imposed by the laws of the said United States upon British vessels and their cargoes, entering the ports of the said states from his majesty's said possessions, have also been repealed, and that the ports of the United States are now open to British vessels and their cargoes, coming from his majesty's possessions aforesaid; his majesty doth, therefore, with the advice of his privy council, and in pursuance and exercise of the powers so vested in him, as aforesaid, by the said act, so passed in the sixth year of the reign of his said late majesty, or by any other act or acts of parliament, declare, that the said recited orders in council, of the 21st day of July, 1823, and of the 27th day of July, 1826, and the said order in council, of the 16th day of July, 1827 (so far as such last-mentioned order relates to the said United States), shall be, and the same are, hereby respectively revoked:

And his majesty doth further, by the advice aforesaid, and in pursuance of the powers aforesaid, declare that the ships of and belonging to the said United States of America, may import from the United States aforesaid, into the British possessions abroad, goods the produce of those states, and may export goods from the British possessions abroad to be carried to any foreign country whatever.

And the right honourable the Lords Commissioners of his Majesty's Treasury, and the Right Honourable Sir George Murray, one of his majesty's principal secretaries of state, are to give the necessary directions herein, as to them may respectively appertain.

JAMES BULLER.

## CHAPTER XLI.

## ON THE CONSTITUTION OF THE UNITED STATES.

*The Honourable J. C. Spencer's Examination of the Honourable A. P. Upshur's Review of the Constitution of the United States.*

IN order to comprehend the views entertained by eminent legislators in the United States of America, we consider it just to introduce into this work the following, viewed by a gentleman and statesman of great learning and ability, on Mr. Upshur's strictures on the American constitution. Mr. Spencer is not only a profound jurist, but he has held the most important trusts in the government of his country. He was one of the most able secretaries of the treasury: an office which nearly corresponds with that of chancellor of the exchequer in England.

"Having," says Mr. Spencer, "been favoured by a friend with the perusal, in sheets, of a part of Mr. Macgregor's great work on the Progress of America, which contained the remarks of the Honourable Abel P. Upshur on the constitution of the United States, I expressed my unhesitating opinion that they were as erroneous as they were injurious; that they were calculated to produce a very false impression of the weakness of our union, and the incapacity of our federal government to maintain itself, or to fulfil the high duties assigned to it; and that it would be equally unfortunate for us and for other countries if those views should be received and accredited, as just expositions of a system somewhat complicated, and therefore liable to be much misunderstood by those who had neither the means nor the leisure for its thorough investigation. I was urged to prepare a statement of the opinions of that class of our countrymen (believed to be, by far, the largest portion of the active and intelligent men engaged in such discussions), who take a practical view of our government, and seek to ascertain its powers and duties by a reference to the plain words and fair meaning of the constitution. Under the impression that the withdrawal from the cares of public life, and the absence of professional engagements, would afford abundant leisure for such an undertaking, a partial assent was given. This having been communicated to Mr. Macgregor, he has announced that in a subsequent part of his work, a review of Mr. Upshur's remarks, by me, would be given. Under these circumstances, although the anticipated leisure has not been enjoyed, yet the desire to fulfil an implied pledge, impels me to endeavour to execute a task which should have been committed to more competent hands.

"Judging from the portions of Mr. Upshur's communication, for portions only of it are given, it would seem that he quite disapproved of our federal constitution; for while he points out what he supposes to be defects, which he severely censures, no part of it has received his unqualified approbation. To those who were acquainted with the peculiar character of his mind, this, probably, will not be surprising. A knowledge of those peculiarities will serve to explain, if it does not elucidate some of his views. Mingling very little with the world, and in a profound retirement, in a secluded part of Virginia, he indulged a naturally speculative mind to its fullest extent, in reflections upon our form of federal government, without ever having had the advantage of personally partaking in its operations.

"He had held public stations in the state of Virginia, but had held no office under the general government, nor had he ever been a member of either house of Congress, when his opinions or nullifications were promulgated. He had prided himself on being one of the most high-toned federalists of the country, until about the time when the disputes with South Carolina commenced. These disputes involved deeply and extensively, the interests of the southern states, who complained that their agriculture was made subservient to northern manufactures, by means of the tariff acts of Congress. Failing to secure a numerical majority in that body, they questioned its constitutional power thus to oppress them, as they said by legislation; and having satisfied themselves of the want of such power, they next inquired into the means of resisting its exercise. This led them to what is called the doctrine of nullification; which means, according to their theory, that any one state legislature which conceives an act of the federal Congress to be unconstitutional, may nullify such act, by declaring it to be inoperative within the limits of the state, and by punishing through the state tribunals, the officers who should attempt to execute it. The old maxim, that where there is a will there is generally a way, was exemplified in this case. The novel system of a federal government uniting several sovereign states in one confederacy, and under one government for certain definite purposes, afforded an ample field for the speculative tendencies of our southern

\* This might have been inferred from the uncorrected proofs by the mail-packet,—but this is not the fact. Mr. Macgregor, of the same opinion as Mr. Spencer.

"Justice to him requires that it should be stated in his own words.

"He first admits, that the supreme court is the proper tribunal, in the last resort, to determine whether the federal government has transcended its constitutional obligation, or not, *to a certain extent*; that its decision is binding and absolutely final, so far as the court has jurisdiction over cases affecting the rights of the individual citizens, and over certain others, affecting the rights of the individual states; and that states, as well as individuals in these cases, have not 'an independent right to construe, control, and judge of the obligations of the federal government, but that they are bound by the decisions of the federal courts, so far as they have authorised and agreed to submit to them.' So far Mr. Upshur has but expressed the clear and unequivocal import of the constitution, and the common opinion of every man in America, who has ever publicly declared his opinion on the subject. It will be seen, then, that the dispute is rather about a question of fact than of principle. The principle is conceded, that the jurisdiction of the federal courts is final and conclusive in all cases where such jurisdiction exists. The dispute is, whether a given case comes within that jurisdiction. If it does not, then no one has yet contended that the decision of the supreme court would be more effectual in determining it, than that of the Emperor of China; it would still remain to be settled. If the parties to the controversy should happen to be a powerful state, on one side, and the federal union, on the other, it must be determined by physical strength—as all controversies must be, where there is no umpire, and the parties will not amicably adjust them. This is natural nullification—independent of all law, all constitutions, and all compacts; in other words, it is a revolution. If this be all that Mr. Upshur and his nullifying associates mean—that when the federal government exercises powers not delegated, no decision of the supreme court can supply the defect in the grant, and that resistance to oppression, even in a judicial form, is a right and a duty, few or none on this side the Atlantic will be found to controvert their views. And it is very immaterial whether this resistance proceeds from voluntary and temporary associations of individuals, or from an organised state government. The intelligent reader will perceive at once that this cannot be the question at issue, respecting which so much ink has been shed. The great and the real question is, *who shall decide whether the case presented does or does not fall within the circle of powers, duties, and obligations of the federal government, as prescribed by the constitution?* It is not as Mr. Upshur would have the reader to infer, whether a state may resist the decision of the supreme court in a case of acknowledged usurpation. But it is, whether the supreme court shall decide whether the power claimed in the given case be an usurpation or not. Now, the real object of the nullifiers is to establish the doctrine, that the states may sit in judgment upon the decisions of the supreme court, review them, like an appellate tribunal; and if any one state conceives that the federal judiciary has sanctioned an usurpation, it may of its own will, and as an incident to its sovereignty, apply the remedy of nullifying, as before explained, or may secede—withdraw from the union.

"Unwilling at the outset to state the question in this broad form, Mr. Upshur, after making the admission before quoted, says,—'But there are many cases involving the question of federal power which are not cognisable before the federal courts; and of course, as to these we must look out for some other umpire.' And in this case it is, as he contends, that each state has the right to construe its own contracts, and decide upon its own rights and powers. In this short extract lies the root of the whole matter; every thing is based upon the quiet and apparently simple assumption, that there are many cases involving the question of federal power, which are not cognisable before the federal courts. Now, this is utterly denied, and it is averred that in the whole history of our government, no such case has ever occurred, and from the nature of our institutions it cannot occur. In other words, it is affirmed that no case can be conceived, where federal power could be exercised of which the courts of the United States could not take cognisance, by means of a suit or legal proceeding presenting the question directly to them.

"If an officer of the United States forcibly collects an impost upon an important article, the laws and the forms of proceeding enable the citizen conceiving himself oppressed to present the question by an action at law. The courts act upon individuals; if they claim to be clothed with authority for their proceedings, the extent and constitutionality of that authority necessarily come up for judgment. If the officers and process of the United States be resisted, civil actions, as well as criminal prosecutions, instantly furnish the means of determining whether such resistance was justifiable or not. By the terms of the second section of the third article of the constitution, the judicial power extends to *all cases* in law and equity arising under the constitution, the laws of the United States, and treaties made under their authority. The question discussed by Mr. Upshur supposes a law of Congress, because, without the authority of the legislative department there can be no exercise of the federal power. And as if to remove every vestige of doubt, and to provide for cases, if any should occur, which did not arise under a law of Congress, the same section provides that the judicial power shall extend 'to controversies to which the United States shall be a party,' without distinction or discrimination. How can there be any cases, then, 'involving the question of federal power,' to which 'the judicial power' of the United States does not extend, or which, in the language of Mr. Upshur, 'are not cognisable before the federal courts?'

"If this, then, be the case, as Mr. Upshur supposes, 'in w to the constitution, becomes all-important and controlling,' the as of no practical consequence ; for the case itself never can o this quiet and unpretending form, the question, nevertheless, is of the whole argument advanced by the nullifiers. Their theo rative—a confederation of sovereign states, and not consolidated to the league, retain the right to construe the compact—the co decide upon its own rights and powers. It is for this purpos our colonial history, contending that we were not 'one people' constitution. In the sense in which he uses this term, no one American colonies certainly were not 'a political corporation ;' to Judge Story by the supposition that he maintained such an has also shown, what no one had ever denied, that by the a states retained their sovereignty ; and he might have added, that which connected them was so apparent—its utter unsuitness, eith the common strength of the Americans, to restrain the pov reluctant to contribute equally to the common defence, was of its abandonment, and of the adoption of the new constitut this new form of government. The inhabitants of the thirteen c and they, unitedly as well as severally, had been acknowledged t 1783. They united in appointing ambassadors to negotiate this ration, they were not only separated from Great Britain, but v mass. France, Spain, and Holland, had recognised them as one the body, not to the several states. The body had formed treatie as a nation, had assumed its duties and responsibilities—nay, i ration of Independence, they had called themselves 'one people extent 'a people ;' they were in the incipient stages of forming ' in a condition—physically, morally, and politically—to do so. Y the states the sovereign power is in the people of the states resp of the United States would, for the same reason, be in the peop were any such people known as a single nation, and the framers historical references already made show sufficiently that there wa colonies, who had made themselves somewhat extensively know army and a navy, a national ensign, issuing a national currency, n and receiving embassies from other nations. The first conditi seem to have been complied with. As to the second condition, single nation should have been 'the framers of the federal gove which was the work of their hands—will be allowed to be good the point. It commences with these words : 'We, the people &c., &c., do ordain and establish this constitution for the Unite provision for its own existence by its last article, that the ratifica ficient for its establishment. It was accordingly submitted to th to their ordinary legislatures, but to conventions elected speciall and to adopt or reject it. This was the most expedient form i the people directly. A ballot, or a *visa voce* vote at the electio parts of the constitution, was obviously objectionable, if not wh object was obtained by calling on the electors to choose delegat diately express their will. Admitting, then, that up to the time tution the inhabitants of the thirteen colonies did not form a se corporation, perfect in its organisation, and capable of maintaining they had so long associated together under a common governme of the functions of the national sovereignty, that they were in a and to perfect their identity ; and the exact question is, what upon them in this respect ?

"There has certainly been a class of politicians who have c complete consolidation, and that the federative principle was ex these are the nullifiers, maintain that the federative principle sti new constitution as it did under the articles of confederation ; rate states have the same right as before to construe for themse words, to set aside the decisions of the federal judiciary. There believed, two-thirds of the American people, who hold both the fallacious, and who adopt a middle course regarding the federal and consolidated—federative in its origin, federative in referenc cerns, and yet consolidated ; that is, an independent integer, a j

foreign affairs, and in general to all that concerns the common interest of the people of all the states. The idea has been correctly expressed by M. de Tocqueville. 'The object was,' he says, 'so to divide the authority of the different states which composed the union, that each of them should continue to govern itself in all that concerned its internal prosperity, while the *entire nation*, represented by the union, should continue to form a compact body, and to provide for the exigencies of the people.' And the whole matter is condensed in one line: 'The United States form not only a republic, but a confederation;' and he shows that the authority of the nation is more *central* than it was in France or Spain, when the American constitution was adopted. The identity of the people of the several states, their *oneness*, as Mr. Upshur expresses it, is very clearly shown by the second section of the fourth article. 'The citizens of each state shall be entitled to all privileges and immunities of citizens in the several states.' Here is a provision that operates, not upon the states, but individually upon every citizen, clothing him with a new character, in addition to that he already possesses. It enables the citizens of Louisiana to inherit lands by descent in Massachusetts; it removes all alienage at once, and leaves no trace of a foreign feature. Without dwelling upon the first section of the same article, which gives full faith and credit in 'each state to the public acts, records, and judicial proceedings of every other state,' and which has been held by all our courts to give them the same effect in every part of the union that they have in the state where they originate, or upon the power given to Congress exclusively, of establishing the mode of making citizens of the United States; and, without adverting to various other provisions of a similar character, it must be sufficient to rest on this single section, which makes the citizen of one state a citizen of every state, to demonstrate that the union is not a mere confederacy, or league of sovereign states, but that it is an integer, a political body under a constitution which declares that treason may be committed against it by declaring war, or adhering to its enemies. It becomes quite immaterial how this result was accomplished, or who were the parties to the instrument by which it was effected. The question, and the only question, is, what is the political condition of the people under that instrument? Are they one people, or are they twenty-seven distinct people, alien to each other?

"Contenting myself with these general views of some of the leading and prominent features of the constitution, I do not deem it necessary to follow Mr. Upshur in his examination of the *structure* of the different departments. He admits, however, that the House of Representatives is *not* federative. The ordinary course of electing a president by the votes of the people of the different states, in choosing special delegates to express their will on that subject, is also certainly not federative; while the mode of proceeding in the event of a failure to elect in the first instance, is evidently federation; and thus, in the structure of the departments, the federative and the consolidating, or central principle, are both adopted, and are applied as the nature of the power to be conferred may require.

"We may now approach more directly the true question which the nullifiers present against the residue of their countrymen, and which Mr. Upshur has rather intimated than distinctly avowed. After enumerating at some length the cases to which the judicial authority of the United States extends, he refers to the tenth amendment of the constitution, by which it is provided, that 'the *powers* not delegated to the United States by the constitution, nor prohibited by it to the states, are reserved to the states respectively, or to the people.' And he contends that these *powers* are reserved as well against the judiciary as against the other departments of the federal government; that among these powers is that of each state, judging *alone* of its own compacts and agreements; that the constitution being such a compact, each state has a right to interpret it for itself, *unless*, and then comes a most important qualification, which presents the point of the whole controversy, 'unless it (each state) has clearly waived that right in favour of another power.' Now the position advanced and maintained by all parties in America, except the nullifiers, is, that by the very terms of this compact this right of each state to interpret it for itself, has been expressly waived in favour of the federal judiciary. No language which I can employ would so clearly state this position as that of M. de Tocqueville: 'The attributes of the federal government,' he says, 'were, therefore, carefully enumerated, and all that was not included among them, was declared to constitute a part of the privileges of the several governments of the states. Thus the government of the states remained the rule, and that of the confederation became the exception. But as it was foreseen that in practice questions might arise as to the exact limits of this exceptional authority, and that it would be dangerous to submit those questions to the decision of the ordinary courts of justice established in the states by the states themselves, a high federal court was created which was destined, among other functions to maintain the balance of power which had been established by the constitution between the two rival governments.' 'To suppose,' he remarks in another place, 'that a state can subsist, when its fundamental laws may be subjected to four-and-twenty different interpretations at the same time, is to advance a proposition alike contrary to reason and to experience. The object of the erection of a federal tribunal, was to prevent the courts of the states from deciding questions affecting the national interests in their own departments, and so to form a *uniform* body of jurisprudence for the interpretation of the laws of the union.' The supreme court of the United States was, therefore, invested with the right of determining all questions of *juris-*

diction. And to effect this purpose, can language be more clear than in section of the third article? 'The judicial power shall extend under this constitution, the laws of the United States, and under their authority, to controversies to which the United States extend to them it must be for the purpose of deciding them, not to some other power or tribunal. It has already been shewn that the judicial power necessarily comprises every case that can possibly arise, involving the federal constitution, and then the courts must decide whether it arises under the constitution, and if it does, the courts must entertain and decide it. It must be dismissed. If it does, the courts must entertain and decide it. It is extraordinary that this very power is conceded by Mr. Upshur in the federal constitution has provided for the final judge or arbiter; and this, too, who is to be legitimate or usurped.' These are his words, and they are to the qualification he makes of the right of each state to it. 'unless it has clearly waived that right in favour of another power.' The constitution has provided for the subject in the way he states, and if it is waived by adopting the constitution, have they not 'waived the right of another power'?

"But Mr. Upshur says, that it is not waived, and this, he says, if the judiciary be the sole judges of the extent of their own powers, and the enumeration in the constitution is idle and useless." This is very inconclusive. The liability of any power to abuse to the minds, tend in the least to prove its non-existence. The same in reference to the judiciary, is still more applicable to the states of their own powers, *their* powers are universal, and the government, or to the judiciary, is 'idle and useless.' The question whether the power has been granted? The object of all political power is to produce and preserve peace, and to prevent wars, by providing for the peaceably by an independent tribunal. Every umpire may or may not take cognisance of what is not submitted to it. In the former case, the question is open, whether it is better to incur this hazard, than the opportunity of settling? And this was the very question which the framers of the constitution debated and decided, and this decision having been ratified by the people of the United States, it is too late to seek to evade it by Mr. Upshur, however, persists in falling back on principle.

"Mr. Upshur, however, persists in falling back on principle, instead of looking to that instrument alone; and he urges that the judiciary is a creature of the states; that it is a mere agent, with limited powers, and that it is not permitted to judge of the extent of his own powers. To a certain extent he is compelled to do this, in that the judiciary is always in subordination to the authority by whom he is created. The fallacy, as it is believed to be, that the federal government is distinguished from the people of the states, there is a fundamental principle as an *agent* to exercise certain political powers—as in the exercise of certain delegated functions, and as being subordinate to the authority by which the judicial power was conferred. It is conceived that the judiciary is entirely different. As its very name imports, it is to *adjudge* the means by which disputes and controversies are to be terminated. It is the contrivance of civilisation, to prevent a recurrence of the same, and the strongest link which unites the ends of the chain of civilisation, which, without it, would not deserve the name of government. The nature of agents, or being subordinate to the authority by which they are created, the judiciary are by the constitution rendered wholly independent of the states, and cannot revoke or annul the authority once granted; and, instead of being created by the same instrument placed above those who created them, and above others. Even controversies between states are subjects of the jurisdiction of the judiciary, then of this idea of their being agents, and bound to make their decisions determine the extent of their powers?

"It will be observed, that the argument of Mr. Upshur concedes, 'the states ought to be, and, I presume, will be, the supreme sovereign power against the decisions of the supreme court if it has jurisdiction.' But this involves the very point of determination; and whatever may be Mr Upshur's opinion of certain jurisdiction, a state which has passed a *stop-law*, as it is termed

of debts, or to prevent their recovery—will not be very scrupulous in its construction of one part of a constitution which interposes a check to its rashness, when it has already violated another part of the same instrument. In truth, this doctrine, that a judiciary is not 'to judge of the extent of its own powers without reference to its constituents,' at one blow prostrates that department of government in the states, as well as in the United States. For, if it be true in one case, it is equally so in the other. Mr. Upshur was himself a local judge in Virginia; but history does not record the instance of his having referred to the General Assembly of that state, which passed the laws instituting his court, and which appointed him to the office; for its directions as to the extent of his judicial jurisdiction, although many perplexing cases of that kind must have occurred before him.

"The argument, so often repeated in Mr. Upshur's remarks, that because the constitution was a compact between the states, one with the other, each must possess the right to construe it for itself, is deemed a very dangerous fallacy. According to our ideas, every government is the result of a compact, express or implied, by those who submit to it. In the states then the citizens who are the parties to this compact must respectively have the same right to construe it for themselves, and in a *clear* case of judicial usurpation must have the right to nullify the decision. Before admitting such consequences it will be well to test the soundness of the premises from which they flow. Now, as remarked in General Jackson's proclamation in 1832; it is precisely because it is a compact that the parties cannot depart from it. It is an agreement, a binding obligation, entered into for mutual benefit, and upon a mutual consideration between the respective parties, that they will respectively fulfil the obligations and perform the duties which it enjoins. Each party has an interest in its performance by the other, and therefore no party can withdraw from that performance without the consent of the others. To secure this performance, all the parties have agreed upon the creation of a distinct and independent tribunal to determine their controversies, not only with each other, but with the common or federal government, and have further agreed that such determination shall be final. That tribunal is not the agent or functionary of the federal government alone. Its members must be appointed with the advice and consent of a majority of the states, expressed by their representatives in the senate. They are the umpires chosen by the federal government and the states conjointly. The very first step which that tribunal must always take when a case is presented to it, is to inquire whether it be one of those that have been agreed on to be submitted to its determination. Now the pretence that one of the parties may under this agreement revise the decision of this tribunal, and decide for itself whether a given case was subject to its jurisdiction, is to nullify not only the decision but the agreement itself. But this it has no moral or political right to do. It would be a shameful violation of not only its faith, but an outrage upon all the other parties to the compact, which they would have the unquestionable right to resent and to punish. This then would immediately bring on a war. It is to avoid this very consequence that the tribunal created to decide these controversies is armed with power to enforce its decisions; and, fortunately, it operates not on states, but on individuals, on the citizens composing the people of the United States. If a state should, through its courts, imprison or otherwise punish an officer of the United States, for executing one of its laws, the persons committing the offence would be held responsible, and to enforce that responsibility the whole power, civil and military, of all the other states, would be put in requisition. Such are the guarantees of our constitution, and that they are effectual and will be called into action whenever occasion shall require, has already been proved in a case peculiarly calculated to test their value and strength.

"With these remarks Mr. Upshur's views on the doctrine of nullification are dismissed, although the subject is far from being exhausted. Many incidental matters have been purposely omitted with the view of engaging attention to the one single point involved. It is hoped that it will at least appear that the constitution of the United States is not the miserable rope of sand which the nullifying doctrine would render it, and that we do not hold our liberties our rights, and our property, by the feeble tenure of the fitful caprice of a state exasperated into fury by faction, or overawed by combinations of powerful interests.

"I have no disposition to follow Mr. Upshur in his remarks upon that clause of the constitution which allows representation to three-fifths of the slaves. It is enough to say that it was one of the results of a compromise without which no constitution could have been formed. Whatever doubts of its justice or its expediency may be entertained, every good citizen will observe and obey it in its integrity.

"He also remarks upon the omission in the constitution to provide for removals from office. He might have noticed a hundred other omissions of details which necessarily flow from express provisions, or which are supplied by the usages of the country from which we borrow our language and so many of our legal and political institutions.

"He regards as a 'striking imperfection' in our constitution the existence of the veto-power, and adds the right to forbid the 'people to pass whatever laws they please, is the right to deprive them of self-government.' Can this be the view of a statesman, or even of a lawyer? The veto

power, or the veto, does not forbid the people to pass what accurate and discriminating is the accomplished author of 'E' as he represents it, an appeal to the people by a president, in the constitution awards him. It is an appeal to the sober sense of the people, to re-consider the matter, and if two-thirds of the people, to be just and constitutional, they may pass it or not. It is a *suspension* veto, not an *absolute* one, as in England would long since have been stripped of every valuable function dependent on the Congress. In fifty-five years that have elapsed has not been exercised more than ten or twelve times; and has been sanctioned by the people.

"The re-eligibility of the president from term to term is and he thinks proper to add, 'Presidents are now made, not by party management.' But he has not intimated that the least effect in preventing party management. A president his successor—nay, greater means than of promoting his own less party management during the second term to which our law of public opinion, than during their first term, when the is obvious that exigencies may arise, such as a foreign war, or continuance in power of an existing administration, that it had devised. The opinion that ordinarily the same person the presidential office is becoming prevalent: and a sound policy late the matter as well, if not better, than it could be done by constitution.

"In conclusion, I ask leave to express a deep regret nothing in the constitution of his country worthy of his country should have been employed in attempting to prove it utter government of laws, incapable of restraining the oppressions the shelter and protection which it promised to every citizen effect of dispelling such a reflection upon the wisdom of our calmly and deliberately weighed every suggestion that was suggested to them by others; who investigated most carefully states, and understood their various local interests; who had in seven years of war and six of peace; and invoking the blessing devoted themselves to their task with a fidelity, patience, and admiration of the world, and finally produced the first writ ever emanated direct from the people themselves—a constitution all Europe, and enshrined in the hearts of all patriotic Americans in any degree cleared of the mists with which a partiality had invested it, I shall be thankful, and shall feel that neither reader has been misspent.

"Albany, State of New York, June 14, 1845.

## CHAPTER XL

### COMMERCIAL POLICY AND LEGISLATION OF :

#### 1. ENGLAND.

In order to comprehend, distinctly, the commerce of the United States of America, it will be indispensable to consider, former, and recent, commercial policy, and legislative enactments appear evident, that all the erroneous principles, and commercial laws of America, bear a closely imitative and relative commercial enactments, that have been mainly derived from her trans-Atlantic colonies, by England.

It would have been superfluous to advert to the former, and recent, commercial policy of England, were it not, that in the United States, and in the states of continental Europe, the *example of England, however unsound, is always referred to, by the advocates of the fallacies of legislative protection to national industry, ingenuity, and enterprise.* We state boldly, that England owes not her prosperity to that specious legislative protection, which America and other nations, extol as sagacious wisdom; or, as grasping maritime, and commercial, monopoly, on the part of the rulers, and lawgivers, of Britain. We repeat, that which we have frequently endeavoured to prove, and which happily, although the progress of conviction has been slow, is now very generally believed in the United Kingdom, and which will be, at no remote period, as generally entertained, and acted upon, in the United States,—but which foreign statesmen, and foreign writers, have very seldom admitted.—We repeat, that England has attained her prosperity,—not by the aid,—but in defiance, of her illiberal commercial system;—that England has owed her wealth, and power, and even her liberty, to her geographical position; to her many commanding harbours; to her fisheries, which originated her naval architecture and her fleets; to the vast power of production, yielded by her mines of coal and iron—*interstratified* for the coal to smelt the iron;—to the coal fields, generally, of the north, central, and western counties, and of Wales; to the coal and iron of the Clyde; to the salt mines of Cheshire, and Gloucestershire; to the copper and tin mines of Cornwall and Wales;—to her geological formation, from her granite, and limestone, to the chalk and sandstone;—to the variety, elevations, and depressions of her soils, rising, from the rich, low, lands of Kent, Essex, Norfolk, and Lincolnshire,—from the fertile valleys and plains of the south, and of the central counties, up to the pastures, on the heights of the South Downs,—on the hills of Devonshire and Somersetshire,—and up to the peaks of Derby, and to the mountains of Wales and Cumberland:—to soils and pastures, varying from the straths, and dales, of Scotland, up to the brows of the Cheviot and Pentland hills, and, north, to Bredalbane, to the Grampians, and to the highlands:—to the materials for building, which her stone, lime, and slate, quarries, and her clays, and her woods, have yielded;—to her oak, and other forests, which enabled her to build her war fleets, her merchant ships, her coasting vessels, and her fishing boats, until wood, when wanted, could have been brought to her ports, and ship yards, from afar;—to the very inconstancy of a climate, not liable to great heat, nor to intense cold:—and, superadded to these great natural advantages,—to those political, moral, and inventive elements, without which all other blessings would have been of minor power:—that is to say,—to civil liberty, under the constitution of England, founded on the Magna Charta, and strengthened, and secured by the Petition of Rights, the Habeas Corpus Act, the Bill of Rights, and the Act of Settlement:—to the perseverance, and industry of her people;—to the enterprise of her manufacturers, and the skill of her artisans; to the Bridgewater canal, and the canals which it origi-

nated ;—to the steam-engine, spinning-jenny, and adventurous spirit of her princely merchants ;—to her brave mariners :—To all these physical, Great Britain owe her power, and prosperity,—her wealth,—her ability, in the maintenance of her taxation and high rents :—in despite of monopolies and food ;—in despite of all these *banes to national progress*, which all countries, and none more so than the United States, would act wisely by cancelling from

Nor must it be forgotten, that England also escaped perpetual wars, which devastated, and prevented the continental states of Europe ; and although her wars have been carried to an incredible height, and her expenses higher for maintaining existence, than those of any other, and character of her people, and the natural advantages have enabled her, in defiance of Napoleon's wars and taxation and dear food, to enrich herself, so far, as to support her people. Her people were enabled to do all this, and to pay for their and butchers' meat, which served to yield high rents to the United Kingdom ;—not by restrictive legislation, but by maritime enterprise,—by a most profitable carrying trade of manufactures, with great gain, into all the markets of the world, of other European countries, was paralyzed by the most desolating invasions.

In time of war, the harbours of England gave her fleets, an incalculable advantage over those of the continent, the prevailing winds, which prevented the sea, enabled those of the east coasts, of Britain, and those of the west coasts being at the same time safe as from the protection of our ships of war, cruising in the English and Irish Channels. Thus, while the continent was disturbed in all their industrious pursuits, Great Britain, by her geographical situation and commanding harbours, possessed the opportunity of supplying the rest of the world with the produce of her colonies. In defiance of the blockade, her manufactures found their way into the heart of Germany. In France, we clothed the soldiers of Napoleon ! ' In all possible calculation of endurance, the natural advantages and enterprise of her people, enabled her to withstand, the convulsions that shook the continent to its foundation.

During the whole period of the last war, and since, the navigation laws of England, and the system of

f the fabrics of other countries, similar to those manufactured in the United Kingdom, were, it is true, in full force: the only *valve* of elusion, escape, and circumvention of these laws, *being the contraband trade*.

But let us fully understand the condition of Europe, and of America, during that period.

For a great portion of the time which elapsed between the passing of the navigation act\* and the peace of Utrecht, the continent of Europe was involved in

\* We have never attributed our maritime greatness to the much extolled Navigation Act. The geographical position of England rendered her always, to some extent, a maritime power. The Danish invasions, and their settlement in various parts of Britain, increased the spirit of naval adventure, and tolls and customs were levied in the port of London before the *Angles* discontinued selling their children to foreign countries, which slave trade did not cease until the latter part of the time of Canute the Great. In the reign of King John, 1213, his fleet is said to have captured 100, and sunk 100 French ships near Helvoetsluys, being the greater part of a French fleet, sent by Phillippe Augustus against the Flemings; and we find a commercial and navigation treaty between England and Norway, as early as 1230, and a similar treaty with Flanders as early as 1274.

In 1302, the same year that the mariner's compass is asserted to have been invented, Edward I. passed a law, *Charta Mercatoria*, for the protection of *foreign merchants in England*; and the Cinque Ports were then compelled to provide him with fifty-seven ships. Two years after, he was enabled to lend her biggest ships of war to France.

During the fourteenth century we find that treaties of commerce and navigation had been concluded between England, and Portugal, Spain, Venice, Holland, Genoa, the towns of Flanders, Cologne, Pisa, and with Scotland and Finland. Edward III. had a great galley built for him at Nice. In 1393 England lends ships of war to Denmark. In 1483 the king of England prohibits the importation of foreign manufactures.

In 1512, the king formed a permanent royal navy. He had one ship of 1000 tons, and hired two ships of war to Venice to fight against the Turks.

The first navigation act on record is that of the 5th, Richard II., 1381, which enacted in substance, "That for increasing the shipping of England, of late much diminishes, none of the king's subjects shall hereafter ship any kind of merchandise either outward or homeward, but only in ships of the king's subjects, on forfeiture of their ships and merchandise, in which also the greater part of the crew shall be the king's subjects."

Henry VII. prohibited the importation of certain commodities, unless imported in ships belonging to English owners, and manned by English seamen. By the 5 Eliz. c. 5, foreign ships were excluded from our fisheries and coasting trade. The Parliament, in 1650, prohibited all ships, of all foreign nations whatever, from trading with the plantations in America, without having previously obtained a licence; and on the 9th of October, 1651, the Parliament of the Commonwealth passed the famous *Act of Navigation*, intended 'to promote British navigation, and to weaken or destroy the naval power of the Dutch.' The act declared 'that no goods or commodities whatever, of the growth, production, or manufacture of Asia, Africa, or America, should be imported either into England or Ireland, or any of the plantations, except in ships belonging to English subjects, and of which the master and the greater number of the crew were also English; that no goods of the growth, production, or manufacture of any country in Europe, should be imported into Great Britain, except in British ships, or in such ships as were the real property of the people of the country or place, in which the goods were produced, or from which they could only be, or, most usually were, exported.

The Dutch had but little home produce to export. The act of the Commonwealth not having been allowed to remain on the statute-book, the provisions of the Navigation Act were embodied, with some little modifications, in the act of 12 Car. 2, c. 18. It was broadly proclaimed, and considered to be, the *Charta Maritima* of England!

In the 14th of Charles II. a supplemental statute was passed, for obviating evasions of the previous statute. The latter statute prohibited all importation of a long list of enumerated commodities, under any circumstances, or in any vessels, whether British or foreign, under the penalty of seizure and confiscation of the ships and goods, from Holland, the Netherlands, Germany, Turkey, and Russia, were included in the 12 Car. 2, c. 18.

war, and manufacturing industry was consequently  
The fleets of England were generally victorious, and

Amongst the very few fallacies uttered by Adam Smith on navigation laws. 'When,' says he 'the act of navigation was passed, England and Holland were not actually at war, the most violent war of two nations. It had begun during the government of William III. who framed this act, and it broke out soon after in the Dutch Revolution and of Charles II. It is not impossible, therefore, that the act of this famous act may have proceeded from national animosity, as if they had all been dictated by the most delirious folly at that particular time aimed at the very same policy which wisdom would have recommended,—the diminution of the only naval power which could endanger the security of England. *is not favourable to foreign commerce, or to the growth of it.* The interest of a nation in its commercial relations is that of a merchant with regard to the different people, to buy cheap and to sell as dear as possible. But the act of navigation, by diminishing the number of sellers, must necessarily diminish that of buyers, and only to buy foreign goods dearer, but to sell our own cheaper, perfect freedom of trade. As defence, however, is of no use, the act of navigation is, perhaps, the wisest of all acts of England.'—*Wealth of Nations*.

Mr. Mac Culloch, on this opinion, makes the following remarks, which may, however, be very fairly doubted, whether, in point of fact, it had the effects, here ascribed to it; of weakening the naval power, and increasing that of this kingdom. The Dutch were very powerful before the period after the passing of this act; and it seems natural to suppose that of their maritime preponderance, was owing rather to their naval power and navigation in other countries, and to the disasters of the ruinous contests the Republic had to sustain with Cromwell, than to the mere exclusion of their merchant vessels from the English market. It is not meant to say, that this exclusion was altogether without effect on the Dutch, to procure a repeal of the English navigation laws, it operated injuriously on their commerce. It is, however, in this respect, has been greatly over-rated in the English mind, and not our navigation law, was the principal cause of the decline of manufactures, commerce, and navigation in Holland. A well-informed author of the *Commerce de la Hollande* says: 'Nimegue, de Ryswick, d'Utrecht, et enfin la dernière paix ont successivement obligé la République de faire usage de la force des emprunts énormes pour en soutenir les frais. Les dépenses ont été une somme immense d'intérêts, qui ne pouvoient être payés qu'à l'aide d'impôts, dont il a fallu faire porter la plus forte partie sur le peuple d'un pays qui n'a qu'un territoire extrêmement borné, et qui n'a d'autre ressource que la main-d'œuvre. Il a donc fallu faire enchérir infiniment la main-d'œuvre, et l'ouvrage d'œuvre a non seulement restreint presque toute sorte de manufactures, mais elle a encore porté un coup à la navigation, partie accessoire et le plus précieuse du commerce, en rendant la construction plus chère, et augmenté le prix de la main-d'œuvre à la navigation, même de tous les ouvrages des ports. Il est donc possible que l'augmentation du prix de la main-d'œuvre n'a été que de l'économie Hollandoise, un avantage sensible aux dépens du commerce d'économie et à celui de frêt.'—(Toussaint).

"This extract, which might, were it necessary, be confirmed by the effect from all the best Dutch writers, show that it is not

with the spoils of the enemy; the Anglo-Americans carried on an active contraband trade in supplying the Spanish, and French, colonies, in America, and in the West Indies with British manufactures; although Spain and France prohibited any foreign trade or intercourse with their colonies. The periods of peace, which occurred between the treaty of Utrecht, in 1713, and the general peace of the world, 102 years afterwards, were of far too short duration for the nations of Europe to become great manufacturing states. The French, and Germans, and Flemings, were industrious; but the profligate extravagance of Louis XIV., the derangement of the public revenues under Louis XV. and his unfortunate successor,—the extortion of the farmers general, and the degraded state of the industrious, and productive, classes in France, were all ruinous to French manufactures, notwithstanding the genius and thrift of the artisans and manufacturers of Paris and other towns. To a certain extent, the silk manufacturers of Lyons, who always declaimed against legislative protection, formed a remarkable exception;\* and this *prosperity* was favoured by the contraband trade in French silks, prohibited to be legally imported into England.

In Germany, including the Austrian dominions, the inhabitants were not sufficiently advanced in the arts, nor were the feudal, or military, systems of those

the restrictive regulations of other foreign powers, but to the abuse of the funding system, and the excess of taxation, that the decline of the commercial greatness and maritime power of Holland was really owing. Neither does it appear that the opinion maintained by Dr. Smith and others, that the navigation law had a powerful influence in augmenting the naval power of this country, rests on any better foundation. The taste of the nation for naval enterprise had been awakened, the navy had become exceedingly formidable, and Blake had achieved his victories, before the enactment of this famous law. So far, indeed, is it from being certain that the navigation act had, in this respect, the effect commonly ascribed to it, that there are good grounds for thinking it had a precisely opposite effect, and that it operated rather to diminish than to increase our mercantile navy. It is stated in Roger Coke's *Treatise on Trade*, published in 1671 (p. 36), that this act, by lessening the resort of strangers to our ports, had a most injurious effect on our commerce; and he further states that we had lost, within two years of the passing of the act of 1650, the greater part of the Baltic and Greenland trades. (p. 48.) Sir Josiah Child, whose treatise was published in 1691, corroborates Coke's statement; for while he decidedly approves of the navigation law, he admits that the English shipping employed in the Eastland, and Baltic trades, had decreased at least *two thirds* since its enactment, and that the foreign shipping employed in these trades had proportionally increased. (*Treatise on Trade*, p. 89, Glasg. edit.) Exclusive of these contemporary authorities, it may be worth while to mention, that Sir Matthew Decker, an extensive and extremely well-informed merchant, condemns the whole principle of the navigation act; and contends that, instead of increasing our shipping and seamen, it had diminished them both; and that, by rendering the freight of ships higher than it would otherwise have been, it had entailed a heavy burden on the public, and been one of the main causes that had prevented our carrying on the fishery so successfully as the Dutch. (*Essay on the Causes of the Decline of Foreign Trade*, p. 60, ed. 1756.)

\* See Commercial Statistics. Part V. France.

countries favourable to manufacturing industry. more immediately remunerative occupations: but with little means, even by the soldier on *furlough* royal fabrics, producing some porcelain, glass, and enormous cost;—excepting, also, the common woven, in most countries, by the peasantry, and rough gear, and other articles made by millwright nary artisans, there were but two manufactures, Germany, including the Austrian dominions. linen fabrics, chiefly of Silesia, and the woollen Saxony. *Both attained perfection without any legislative government prohibiting, or imposing high duties on woollens: without, as in England, Scotland, and on woollens, excluding, by prohibitions and duties on exportation, or bounties on their being made, and*

England at one time imposed legislative impediments on foreign linen and woollen manufactures. But, of what consequence? Certainly not. The wars of Frederick and Napoleon, which involved, in ruin, the peaceful habits of Silesia, rendered useless high duties on, or woollens of those countries, in England.

The manufactures of Venice, and of Italy, were paralysed by those, and previous, wars. Those of Flanders, and the Dutch, and Flemings, did not abandon them to fail in producing fabrics, to compete with

Denmark, Sweden, and Russia, never had, manufactures of consequence. Portugal had not common trinkets, and the ordinary woven fabrics of articles, made by ordinary handicraftsmen. Long before the Methuen treaty, British woollens were worn, and

The imbecility of the Spanish monarchs, and the ecclesiastics,—and the ignorance, and superstition, and the pride and haughty character of the aristocracy, at all times, for that country to manufacture in competition

*Anglo-America* was not, nor, during the colonial period, allow her to become, a manufacturing country; as that policy as arbitrary and unjust on the part of Britain, and unprofitable for America to fabricate articles,

much cheaper by England, in exchange for the raw materials of the old colonies, and for the money realised by the trade carried on, illicitly, or otherwise, with the foreign West Indies.

With the exception of one article, therefore, there were none that, it could have been even pretended, any other country was able to manufacture cheaper than England: that article consisted of silk in its various forms. Yet in Lyons, the chief, and most profitable, seat of the silk manufactures, the manufacturers always denounced legislative interference, and protection. In order to create magnificent silk manufactures in Spitalfields and Derby, French silks were absolutely prohibited until 1828; and, since then, high, and in many cases prohibitory duties, have been imposed, and are still imposed, on French silk manufactures. Now what has been the result of high duties, or prohibitions, in England? It is evident that the manufacturers of cotton, of wool, of metals, and of earthenware, never—or scarcely ever—looked up to high duties, and prohibitions, as protections, under which they should rise and flourish. They naturally considered the home demand, as a remunerating market; but they looked, also, to the markets of the world for their fabrics, and in which, if they did not manufacture so cheaply, as other countries, they must sell at a loss, and not at a profit. Can any French, or German, or American statesman, or legislator, or politician, or lecturer, or manufacturer, or shipowner, be sufficiently credulous to believe, that English manufacturers, would have persisted, since the days of Charles the Second, in fabricating goods, extensively, for supplying foreign markets, at a loss, because monopoly of the home market was secured to them by the legislature?

No! It is evident that whenever an article, of any importance, continues to be exported to a foreign market, it cannot be injured, by a similar article, manufactured abroad, entering into competition in the home market with the home-produced article: otherwise, the home-produced fabric could not be prepared for any market so cheaply as the foreign article,—and, consequently, would not sell in a foreign market, except at a loss: that is, at a price as low as a similar foreign article of equal quality.

It was attempted, in the United Kingdom, to rear and encourage linen manufactures, by prohibiting, or nearly excluding, by high duties, all foreign manufactures of flax, except linen yarns: the latter being required for the looms, the importation of them chiefly from Silesia. Bounties were also granted on the exportation of linens. The whole fallacious expedient proved a miserable failure. The forced manufacture, was never really profitable, but it was expensive. The Scotch linen-pinnners, weavers, and bleachers, did not depend upon artificial, but upon the intrinsic cheapness of their fabrics, and upon economy: they considered the bounty on the exportation of linens a free gift, which they did not refuse to accept. The bounty upon linens, exported, was abolished, and the prices actually in-

creased. We could, without difficulty, prove, industry, as well as in regard to linen manufacture, the bane of prosperity; and that competition, and production exist, is the true promoter of perfect and consequently prosperous, the works of labour as

Of all the fabrics of England, the silks of Scotland are highly protected. Yet there are not so wretched a Kingdom, as the silk weavers of that dirty, unweather-beaten, daring, smuggler, has always evaded the coast guards, upon which depended the fortunes of the artisans, who have inhabited, and now inhabit the south-eastern London districts. If there were high duties, the silk manufactures of Spitalfields existed, to tempt men into wretched employment and prospered, on fair, practical grounds of justice and principles; and, would have, consequently competition with similar fabrics produced elsewhere. Concerned as artisans, would have clean, and salubrious, have had a sufficiency of what we believe the present generation, or in past generations,—that is, decent and decent clothing. Instead of which, they were prohibited; they continue miserable, when there are in the duties, so far as still to allow the smuggling duties, of from thirty to sixty per cent, on fabrics compared with their great value. We have little to say of the wretchedness of the present generation of silk weavers, not enticed, by the fallacious hypocrisy of high duties, the same, or similar abodes of wretchedness.

But whenever a diminution of duties upon foreign manufactures, of similar articles at home, has been always, proclaimed, that ruin must be the consequence, and covered that this effect has followed; and the only manufactures we have found not to prosper have been those, the elements were not favourable, and which, could not have been attempted. One drawback we have to mention, that material has been highly taxed. When the duties upon the manufactures of leather, on leather itself, and turpentine,—all engaged in those fabrics assuredly *would be ruined*. But they have all gone on, since experience, in England, proved it to have been, have been abolished,—and such will be the same duty, which has been imposed, under the assumption of a productive industry.

Were it otherwise, we should still consider it pernicious, and unjust, in a government, or a legislature, to tax any one class, or any one individual, at the expense of another.

We lay it down as a sound principle, that the *occupations of the people, commodities, and commerce, should not*, any one of the three, be taxed at the expense of the other two.

Since the year 1821 there have been great modifications in the British customs duties. The tariffs of 1842, and 1845, have constituted the greatest advances since Mr. Pitt's tariff in 1787, towards sound principles; but the existing tariff still includes the most pernicious rates of duties. Modifications of the navigation laws, have also been made.—*See Navigation and Customs Laws.*

As to the terms RECIPROCITY, and PROTECTION, the first, as well as the last term, has been fertile in fallacious arguments. The advocates of reciprocity contend, that we should not, in England, reduce our customs duties, if other countries do not diminish their import taxes. In plain language, that so long as other nations continue to do what is *wrong*, the British government, and parliament, should also maintain that which is *wrong*—that we should not do that, which, we know, to be *right*, because other nations do not, simultaneously, decide upon doing that which is *right*.

When the interchange of commodities, either raw or manufactured, between the inhabitants of a town or district, is subjected to no other restriction than, its just proportion, of the tax purely necessary to maintain its *security* and its *municipal order*, and to defray the expense of erecting and supporting *indispensable public buildings and institutions*, we find, in that case, practical *free trade* existing, within such town or district, based upon a common interest, which each individual will, from personal interest, struggle to maintain in its peaceful course.

A great nation is a great community, and all the nations of the earth, if the intercourse and trade between them were as free as between the individuals of a municipality, would then actually enjoy a peaceful and profitable system of common intercourse, based upon common interests, which it would be ruinous to any one of the nations concerned to disturb. The greater the commercial relations between the nations, the more disastrous would be the consequences of a war which would interrupt their reciprocity of interests. In proportion as this commercial and reciprocal interest has been of long standing, and of great extent, the greater would be the securities for the maintenance of peace, and the more disastrous would be the calamity, of continuing a war, between two or more countries so circumstanced.

All wars are, more or less, detrimental to the production of wealth, but a suspension of intercourse with a nation in which England finds but a trifling demand for her manufactures, would be of minor consequence, provided such war did not interrupt our intercourse with countries whose trade was of important

value. A suspension of intercourse, for example, could, only with great loss to both, from the long of their mutual intercourse, be possibly maintained.

A WAR OF MATERIAL INTERESTS, or, more properly, INJURIES—that is, a *war of custom-houses* or *fiscal revenue officers and servants*, has long been declared between European nations. This warfare of interests, or the wars of bloodshed; and, if we may ever expect of the calamities attendant on, and consequent to the destruction of the elements of the former,—in short, by *tween all nations*.

In the history of Europe we cannot discover a nation, that has not maintained its war of material interests during the usually considered state of peace, as well as during armed hostility.

There is no theory, probably, more flattering to a whole nation, than to institute measures which will enable it to compete with other nations, by producing, and manufacturing, goods necessary and luxurious. It was easy to win a nation by the application of so very plausible a delusion. Colbert to revise and establish\* those fabrics which were prohibited, and by revoking the edict of Nantes, nearly at once, drove the most skilful artisans from France in great numbers. M. Colbert, one of the most honest and able men France can boast, directed his steadfast attention to the improvement of his country, unfortunately for his country, he became dazzled by the success of forcing home manufactures by monopolies, by duties on those of other countries. He encouraged them by exclusive privileges, manufacturers to settle in France by despotic laws, without considering the oppression, the many for the benefit of the few, that competition which creates cheapness, and that his bounties, and duties, were taxes especially on the agriculturists, who have no duties, nearly prohibitory, on the article *iron*: hammers, harrows, and all other implements of husbandry.

\* M. Colbert did not, however, establish the system of duties on imports, never exceeded ten per cent ad valorem. "He," says Voltaire, "against the freedom of trade in corn." With his patriotic views respecting manufactures, we are bound to admire his administration. He had to struggle all his life against the selfishness of the aristocracy. He was shamefully ungrateful to him. The aristocracy detested him, when he died in 1683, that he was buried at night to

however, became exceedingly popular. Its promised grandeur, flattered national vanity; and neither the monarch, nor the people, nor Colbert himself, understood its fallacy. Political economy was then unknown.

If we are to be governed by the lessons of experience, we are led to the following conclusions, on the taxing of commodities; whether levied, by an excise on the produce of home labour, or, by a customs, on foreign or colonial articles.

In order to obtain the greatest revenue, from taxes so imposed, the maximum of taxation will be the point, which will yield the most revenue, without that maximum ascending higher than the point, where it commences to reduce the consumption of the taxed article, in a greater ratio than the increase of the tax: or if the article taxed, be imported from, or similar to one produced in, a foreign country, the tax must not, whether the object be revenue, or, the fallacy called, protection, be so high, as to leave any profit, exclusive of the risk, to the contraband trader.

The governments of nearly all countries have, probably as far back as their foundation, exacted tribute, or tolls, on the importation, or exportation, of commodities. The department of government, established to levy those taxes, was variolously named. It was originally neither more nor less than a toll-house, erected at in and passes, or at landing-places, for collecting a tribute to be paid to the king, or prince. In progress of time, it grew up to be one of the most formidable departments of state,—by the sea-coast, by straits, by rivers, and by land. In Germany the name is still *Zoll*, or toll,—in France, *Douane*, in Italy, *Dogana*.

Commodities produced in one country, and imported into another country, to be used therein, can only enter extensively into consumption when the price is, as low as, or lower than, that which similar commodities can be produced at home.

The natural advantages, or disadvantages, of soil, climate, minerals, raw materials, geographical position, population, and the state of the arts and sciences, vary so greatly in one country from those of another, that some countries *can produce* some commodities, which others *cannot*, at equally low prices.

Commodities which a country does not produce at all, or only at high prices, can be consumed, by the non-producing, or dear-producing, country, with more advantage, and in greater quantity, if those articles are purchased at, and brought from, the places where they are to be found at the cheapest cost.

There is no country, with ordinary advantages, that does not produce some commodities so cheaply, as to find a market for what it produces, over its home consumption, in some other country; and, from which a different kind of article may be brought, with profit, in return.

This interchange constitutes international trade.

The more numerous, or more burdensome, are the restrictions, the more limited will this commerce be.

The fewer and lighter are the restrictions, the more extended will it prove.

All experience forms evidence of these facts.

If a nation were in a condition that its administration, and security, could be maintained without *exacting that TAX upon the value of COMMODITIES*, which constitutes, not the whole national income, but, as usually levied, what is termed the *indirect public revenue*, then no *duty* whatever should be levied either upon articles produced at home, or upon those imported from foreign countries.

A public revenue being indispensable to defray the necessary public ex-

penditure, PROPERTY, whether in LAND, or in COMMODITIES, or imported from abroad, ought to be taxed, or make a proportion of its rent, or profit, equal to the amount upon the nation. This proportion of the annual revenue would then form the whole amount of equitable taxation, which could equitably constitute the WHOLE NATIONAL INCOME.

But unless the revenue required be small, and the tax not to render the collection of the tax inquisitorial and annoyingly submitted to. Yet they are submitted to in a measure scarcely at all in the United States of America. But independently of direct taxation, if commodities which are to be taxed, the equitable scale of levying this tax is the same duty upon an article, produced at home, or imported from abroad.

There can be no other equitable scale of taxation, whether produced at home, or imported from abroad, for domestic consumption.

The producer never pays the tax upon the article; he produces it to make any profit by it, the duty, or tax, as well as the cost of production, and then the consumer pays the whole, and the consumer pays the whole.

Whoever produces the article consumed, or where it is consumed, pays, not the cost of producing it, but the whole market value, including every tax upon it. The producer is, however, the consumer of the article he produces being highly taxed, whether the profits are also diminished by taxes, either at home or abroad, which he produces, as well as by the taxes upon the article consumed.

If the market value, of the home-produced article, is less than the market value of a similar article, produced and imported from abroad, arises from a restriction upon the admission, for the article: either by actual prohibition, or by high duties, or by duties so high, that the foreign article is not used, at prices equal to the amount, both of its natural value and the tax added, either for revenue, or to protect the home-produced article.

The difference between the natural price of an article, and the higher price of a similar article produced at home, is the whole community, with the view, for there can be no amount of that difference into the pocket of the producer of the article. It is also a far greater burden upon the nation, to the value of so much of the labour, production, and consumption, the protective tax restricts.

If taxation upon articles of consumption be indi-

pon the public revenue: *then*, if a quarter of wheat imported from Prussia, dessa, or elsewhere, pay a duty of eight shillings, or four shillings, when entered for consumption in the United Kingdom: in like manner, every quarter of wheat reduced at home ought, on sound principle, to pay a duty of eight shillings or four shillings: or, if 112 lbs. of sugar imported from Jamaica pay a duty of fourteen shillings when entered for consumption, there should be no distinction made to the consumer, when he pays a tax on the sugar he uses, whether it has been produced in Bengal, Brazil, Cuba, Jamaica, Java, or elsewhere: or, if a gallon of distilled spirits *produced*, and *consumed*, at home be taxed ten shillings, in that case a gallon of distilled spirits whether *imported* from France, Holland, the West Indies, or elsewhere, ought to pay no more, when *consumed* in the United Kingdom, than a tax of ten shillings.

But although this mode of taxing commodities must be admitted equitable, there will always exist in the United Kingdom, as great a feeling against, as great a resistance to, taxing articles produced at home, as there would be to levy the revenue by direct taxation. *In fact, an excise, from the necessarily inquisitorial nature of its character, will always be odious among a free people.*

It, therefore, remains to be considered how far we can advance, in simplifying, or reforming a system of finance, in order, at the same time, to raise the necessary revenue; and, to impose taxes according to the most equitable distribution, and consistently with the least possible inquisitorial, or oppressive, mode of collection.

FIRST, AS TO TAXES UPON COMMODITIES.

The following statements will illustrate the revenue collected by the two great departments of these taxes, the *excise* and *customs*.

EXCISE.—There is no disputing that the permanent establishment of this, at all times to the people of England, odious means of taxation, owes its foundation to the long parliament, which “*assembled, and sat, with the resolute purpose of never dissolving until all illegal taxation was abolished.*”

Odious, however, as the excise has ever been to the people of England, numerous articles were subjected to it, from the time when it was established by the long parliament, and afterwards under William III., and from that time it was increased under every sovereign, down to the late war, when we find the list of excise paying articles to include, before the close of the year 1800,—

Auction duty and licences; beer, bricks and tiles, candles, duty and licences; coffee, cocoa-nuts, coaches, duty and licences; cyder, perry, and verjuice, coffee dealers, chocolate dealers; dealers in all other excisable articles; gold and silver dealers, glass, hides and skins, hops, leather, malt, manufacturers of all excisable articles, metheglin or mead, old malt, mum, cyder and perry duties continued; paper, parchment, printed calico, and all printed woven goods; salt, soap, shawls British, Irish, and foreign snuff, starch, sweets, or home-made wines, tea, tobacco vellum, wine, wire.

These forty-two heads of excise duties yielded

In 1845 Sir Robert Peel abolished the auction duty, and the obnoxious duty on glass, amounting together to 953,013*l.*

Now, in order to render the excise as little oppressive—as free from inquisitorial interference with labour, manufactures, and trade, we consider that, whenever the revenue can be levied equitably, and less oppressively, from any other source, we should abolish all the remaining excise taxes: excepting the duties on distilled spirits, malt, and licences; and, the collection of the two first of these might be transferred to one *new and efficient revenue department*, to replace those of the existing customs, and excise, and which would collect the taxes on commodities. The third licences might be transferred to the stamps and taxes.

We would therefore abolish, 1. The duty on bricks, as bearing oppressively hard upon a laborious occupation, which affords, and would afford, much greater employment to the people; thereby giving employment to bricklayers, carpenters, glaziers, joiners, upholsterers, &c., &c., thereby diminishing poor-rates.

2. The hop duty is partially repealed; an excise duty upon wheat or apples would be as reasonable as upon hops. It imposes a tax upon particular productions which can only be cultivated in certain parts of England; and the poor-rates in Kent are much higher than in any other county.

3. Paper duties are also an obnoxious and unequal tax.

3. The post-horse duty is a tax upon intercourse, and highly objectionable.

4. The soap duties are absolutely a nuisance.

5. The game certificates are ridiculous as a revenue tax.

6. But with every exception that can be urged against the excise, we cannot dispense with its revenue, except by bold, equal, and just legislation in regard to other sources of taxation.

## II.—REVISION OF THE CUSTOMS DUTIES.

With the exception of the duties and prohibitions imposed for protecting various interests, the duties increased since 1787, were augmented with the idea of adding the same proportion to the income then yielded, as to the duty increased. The fact of high duties either causing a diminution of consumption, or an increase of smuggling, seems to have been utterly unknown to the generations which had risen in the Exchequer, and the House of Commons, during the reign of George the Third, and until the duties and prohibitions were grappled with after the year 1819, by Mr. Huskisson and others. The revisions made in the tariff of 1825, by Mr. Huskisson, 1831 and 1832 by Lord Althorp, and in 1833 and afterwards by Lord Sydenham, then Mr. Poulett Thomson (although those statesmen went as far as parliament would allow them, the ministers having been actually outvoted in an attempt to revise the timber duties), still left the customs duties and corn laws on a scale highly injurious to the nation. The reductions and abolitions of customs duties carried into effect by Sir Robert Peel in 1842 and 1845 formed the greatest reform made in the customs duties since 1787; but the defects even of the existing reformed tariff of customs duties are palpable. The scale of corn duties were not defended as revenue duties, but as a scale of protection to the British agriculturist. The scale could not be protective, without raising the price of bread to the consumer. If it did not intend this it meant nothing. If it did not intend to allow corn to be imported from foreign countries to be sold at *natural prices*—that is unrestricted competition prices—the scale was a fallacy. If it intended to be a scale of revenue duties, the duties should have been fixed, and not variable duties, veering with the weather, and with the season. But we are bound in justice to the minister, to say his difficulties were great, and that his moderate reduction of corn duties, aroused the great body of landlords into opposition against him.

The sugar duties are highly fallacious, both in regard to supply and revenue. There can be no equitable pretence for taxing sugar, or any other commodity, except for revenue. In eight months there has been a decrease of about one ,000,000*l.* of revenue, occasioned by the recent alteration of the sugar duties. A duty of 18*s.* 8*d.*, or 2*d.* per lb. on all sugars, without reference to production or origin, would have yielded an increase in the year of about 1,000,000*l.*: difference of revenue about 2,000,000*l.*

Nor can the rates of timber duties be equitably defended. There has been a loss of 600,000*l.* occasioned by reducing the colonial timber duties to 1*s.* per load. If this duty had been reduced only to 5*s.* there would have been no loss of revenue; although the duty on foreign timber was reduced from 55*s.* to 15*s.* per load.

\* Exclusive of tea sold by the East India Company prior to the 2 to the Excise.

† Including copper at reduced duties.

Since the reductions in 1840 the duties on all the articles marked number, about 500, of those classed 35 as "Other articles" (c). On the duties on animals, bacon, beef, pork, and hams, and most of the duties on corn, grain, flour, meal, rice, reduced to low nominal rice, silk manufactures, &c., will be greatly reduced by Sir Robert Peel.

If we examine the foregoing table we find that, with the exception of timber, metals, tallow, articles of food, which may all be considered as raw materials, and silk and gloves, which are manufactures, the revenue derived from all, with the exception of the first eight articles, is scarcely worth the expense of collection.

The total revenues of customs, deducting articles of food, amounted in 1844, to 22,041,418*l*. Deducting the revenue from articles upon which the duties have been abolished (about 1,400,000*l*.), there remains 20,641,418*l*. Of this amount the eight articles first enumerated in the table yielded 19,520,326*l*., leaving a balance only for all other duties (except food), not abolished, of only 1,121,092*l*., and of this balance timber alone, at the reduced duties, yielded 916,606*l*. Nett balance of duties which we would propose to repeal (exclusive of timber) 204,486*l*.

If we therefore proceeded to tax commodities only upon the sound principle that, if an article should be taxed, the duty should be levied without any reference to its origin, let us examine the result as to the extent of oppression, and the inquisitorial mode of imposing and collecting the taxes.

Taking the revenue from customs and excise, for 1844, deducting the duties abolished, and corn, which it has been contended ought not to be considered an article taxed for revenue :

Customs . . . . .	£21,841,743
Excise, deducting sums which we would propose transferring to stamps and taxes . . . . .	12,460,062
Total . . . . .	33,801,805

Now, upon the principle of taxing no article with reference to its origin—if we abolish all the articles included in the excise, with the exception of malt and distilled spirits; and all duties of customs, except the first eight in the table, we attain this object, and we render the excise infinitely less inquisitorial, and oppressive than it has ever been, since its establishment by the Long Parliament.

These abolitions accomplished, the next consideration is the amount of revenue to be received, taking the year 1844 as the basis of calculation, viz. :

The first eight articles under the customs . . . . .	£19,520,326
Malt and distilled spirit . . . . .	10,008,752
	29,524,078
Loss of revenue, supposing no increase of consumption . . . . .	4,277,727
Total . . . . .	33,801,805

The year 1844, however, yielded from malt and dist less than the average revenue, which has amounte be safely calculated upon to yield hereafter, say If we allowed the consumption of the eight articles first enumerated to increase, even in a much less than the increase of population since 1835, and revenue derived from those articles at that period. cially if we equalise the duties on sugar without r its origin, we consider it perfectly safe to estim venues from the first-named commodities at .

#### Total taxes on commodities

The collection of these taxes might be place would at least add half a million to the revenue, u efficiently and intelligently organised.

#### REVISION OF THE DIRECT TAX

The next class of taxes are the direct taxes, the income tax, viz.,

Assessed taxes	.	.	.	.	.	.	.
Income tax	.	.	.	.	.	.	.

Total direct taxes .

The most convenient adjustment of the present abolish them altogether, and substitute a direct realised property. A revenue of from 10,000,000 t by this simple and just method of direct taxation ; what we have observed in France, Austria, Prussia its collection would in a short period be found less g Great Britain, than the existing vexatious and inqui we are not blind to the parliamentary obstacles oppo in substitution of the existing assessed and income t taxes, which we propose to abolish.

One obstacle to our plan is the Land Tax Re tainly the greatest financial blunder ever committ The rottenness of one measure, of expediency, will some other, unsound, expedient, to palliate for the ti bold and sound remedy. Temporary expediciencies, for future exigencies, occasioned the financial difficul Restriction Act. The embarrassments in which this cellor of the Exchequer, made him seize upon the n was to offer up for sale the fixed revenues of Great measure, as far as it has been carried into effect, m showing how little advantage has been gained t proportion to the amount of revenue lost, but as

the Land Tax Redemption Act has formed to a sound adjustment of the taxation of Great Britain. Had the land tax been completely, instead of partially redeemed, this difficulty in the way of financial legislation would have been greatly diminished ; but as it is, it has formed a plea for not imposing any further tax upon land. But to this we are honestly bound to demur.

Another difficulty opposed to an equitable adjustment of the assessed taxes is, the circumstance of there being no such taxes levied in Ireland. The justice, again, of this *exemption* in *one*, and of *liability* in the *other two*, of the *three united kingdoms*, would be a task requiring powers of more than ordinary ability to defend. The justice of the exemption we deny. Taking the assessed taxes of Great Britain as we now find them, and considering them not only to be inquisitorial, and grievous, in the collection, but exceedingly injurious in their operation, being detrimental to industry, and to the employment of artisans, and the labouring classes, we consider the following revision as the most equitable, which may be adopted with the least objection in practice, and with the greatest safety to the exchequer.

The nett amount of land, and other assessed taxes, for 1843, was	£4,385,067
The nett amount of unredeemed land tax	1,139,148
Nett amount of assessed taxes, exclusive of land taxes	£3,245,919

All the assessed taxes we propose to abolish, except the unredeemed land tax, and for the following reasons :

First.—THE WINDOW TAX, which yielded for the year 1843 . £1,545,281  
*Reasons for Abolition.*—Being inquisitorial and vexatious in the assessment and collection ; injurious to the health of the population ; being objectionable as regards architecture, cleanliness, and restricting the employment in glass manufactures, of joiners who make window-frames, of glaziers and painters ; and being a tax unequal in its assessment, as large houses do not require the same number of windows, in proportion to rents, as small and middle-sized houses. In the latter respect, the window-tax is particularly injurious.

Second.—SERVANTS, yielding revenue in 1843 . £200,251  
*Reasons.*—Being a tax which limits the giving employment to servants, and by their not being employed, the occupation of others is limited, as cloth manufacturers, tailors, hatters, shoemakers, &c., for their clothing, &c. Every limitation of employment, whether of servants or others, limits industry, and increases the poor-rates.

Third.—CARRIAGES, in 1843 . £428,903  
*Reasons.*—This tax is grievous, as it limits to a most injurious extent the employment of artisans and workmen, the great proportion of the value of carriages of whatever description, and their appurtenances, being the labour and skill of coach-builders, coach-spring makers, coach-smiths, curriers,

cloth-manufacturers, coach-painters and glaziers, harness-makers, and saddlers, &c. The employment of carriages creates also employment for coachmen, servants, and horses, &c., &c.

Fourth.—Horses for riding, &c., and other horses and mules . £376,001

*Reasons.*—By the assessed taxes restricting the employment of horses for riding, and other horses and mules, &c., it is easy to prove that this tax does, to an immense amount, limit employment; *exercise* for health and recreation is also greatly restricted by its expense. It is especially grievous as a tax on horses by the day. Countless thousands, who cannot afford to keep horses, on account of the expense of feeding and taking care of them, would hire horses frequently by the hour or day, were it not for the high duty on each time a horse is let. It is also injurious to curriers, saddlers, harness-makers, horse-cloth makers, blacksmiths, stable-keepers, sellers of fodder and oats, grooms, &c.

Horse-dealers . . . . . £10,860

*Reasons.*—Tax unjust. Why not tax other dealers?

Dogs . . . . . £151,857

*Reasons.*—Chiefly that of abolishing the assessed taxes, and as the substitution to be proposed will justify the abolition of this tax. It is also inquisitorial, and an often evaded tax.

Hair Powder . . . . . £ 4,212

Armorial Bearings . . . . . 67,137

*Reasons.*—The same as those for abolishing the dog-tax.

Game Duties . . . . . £127,130

*Reasons.*—The same as those for abolishing the taxes on dogs.

Now the amount of the direct taxes, exclusive of the income-tax, proposed to be abolished, is about 3,225,000*l*.

We believe if all the grievances and inconveniences of the assessed taxes which we propose to abolish, and the convenience in collection of the taxes we propose to substitute, and the far less inquisitorial nature of rating the rents, or profits, of realised property, were but clearly understood by Members of Parliament and their constituents, that this great financial reform, which may appear, to little men, a bold measure, would be carried in the House of Commons without a division. In order to extend the direct tax upon property, we should, in equity, extend it to Ireland; and we could show that the people of Ireland would neither be treated, unjustly by such taxation upon the rents, and profits, of realised property, but that it would even be made beneficial to the improvement of that country, and to the condition of the inhabitants.

**STAMP DUTIES.**—This tax yields the treasury,

From Great Britain, about . . . . .	£ 6,750,000
From Ireland, about . . . . .	453,487
Total . . . . .	<u>7,203,487</u>

The delay and restriction imposed by stamps upon trade and commerce, would justify the abolition of this tax altogether, but its amount is too important, in the existing financial condition of the United Kingdom, to permit such a measure of convenience, as well as relief, to the population. In some respects, it cannot be highly objectionable; deeds and other acts and documents of great importance, owing much of their security against fraud and forgery to the stamp, may reasonably be made to bear an expense for this security.

But knowing that the stamp-duty acts oppressively in many respects, we cannot pass it over without proposing some alterations.

The stamp-duty upon fire insurances is, annually, about double the amount charged for insuring property; this high duty, not only greatly prevents the insuring of property, but property, not insured, is frequently exposed to danger, by the firemen with their engines not exerting themselves to extinguish uninsured property, as they are directed by the companies who pay them, to take care, in the first place, to preserve the property insured.

On marine insurances, the stamp-duty is so heavy and pernicious, that a great part of the insurances which would otherwise be effected in England, are made at Antwerp, Rotterdam, Amsterdam, and Hamburg.

The stamps, therefore, on fire and marine insurances, now yielding about a million and a quarter, should be abolished.

Licensing stage-carriages and hackney-coaches appears a duty which ought to be abolished; it produces something above half a million for Great Britain.

Ireland is exempt from this duty on hackney-coaches and stage-carriages. The licence-duty on them in England is, however, not severely felt, nor very restrictive upon occupation; while it forms, to some extent, a guarantee for the faithful performance of the obligations of the proprietors of carriages and their servants.

The probate and legacy-duty yields about two millions sterling annually, for Great Britain; and for Ireland, only 66,032*l*.

It is a duty that may be evaded, by giving, during life, that which is bequeathed by the giver, only after his death, to the person who is to receive the legacy. The mistrust of the possessor, however, or the power that it gives him, while in life, does not often allow him to surrender his property until he is in a state unable any longer to meddle with it. So that while men continue to possess wealth, the treasury will receive a considerable revenue from the stamp-duty

between the whole of Europe and all North America, including all the countries from the Gulf of Mexico to Lake Superior. It would, in practical effect, be connecting Europe and America in common interests, by convenient, rapid communication, forming, in truth, a great Broadway of intelligence and civilisation, and, with freedom of trade, the best means of increasing the commerce and prosperity reciprocally of, and maintaining peace and good faith between, the countries most interested. Under the old packet system, between Falmouth and Halifax, by the gun-brigs, exclusive of the deplorable loss by foundering of nearly all those dangerous vessels, with all their crews and passengers, the expense to Government was about 40,000*l.* annually more than the receipts of postage. By the recent line of steam-ships, a balance will, we believe, at the end of one year after the first packet steam-ship sailed from Liverpool, appear to the credit side of the Atlantic mails.

Many other arrangements for carrying the mails by steam have been made by the treasury and admiralty. Traversing the world from England to the Gulf of Mexico, and then overland, to meet other steam-ships on the west of the Isthmus of Panama, to communicate over the Pacific to New Zealand and New Holland, —meeting other lines communicating with India, the Red Sea; and by crossing over the Isthmus of Suez, meeting the British mail steam-packets for England at Alexandria, we believe to be far from an impracticable delusion. The practicable, and not unprofitable, establishment of all this is not far distant; especially when we all know, how very lately the practicability of running steam-ships across the Atlantic was questioned, doubted, and denied. The recent contracts for multiplying the steam communication with India, and by a branch line from Ceylon to China, will be found of immense advantage. The steam communication recently extended to the Levant, is also important.

There is another great consideration, one of economy, too, in the end, in regard to large, strongly built, and powerful steam-ships—that is the readiness with which mail steam-ships of great strength and power may be turned into steam-ships of war; and that they may be *de facto* considered as such on the North American, West Indian, and Mediterranean lines. Now, if this mail steam-marine were to belong to foreign countries, British capital no doubt would, we believe, be that chiefly invested in them; yet in the event of war, they would not only, not be available to England, but they would in all the likelihood of probabilities, be turned against us. This, in the change which steam power must create in naval tactics, is a most serious consideration for the British government, and for the British public.

We would, therefore, recommend that any surplus revenue from the post-office should be applied to increasing the number of mail steam-ships.

## PROPERTY AND INCOME

These never have been, nor are they likely to be:—especially the tax upon incomes not derived from property, the tax on trades and professions. But when we have a deficient revenue, we are bound to resort to expedients which we always do so, in order to maintain the national credit.

If a house tax, alone, would meet the deficiency of the unsound, and inquisitorial, taxes we have at present, of excise, customs, taxes, and stamps, we would prefer that rather than to have any recourse to, an income tax, which would demand upon the treasury, to meet the demands of the years, permit the abandonment of the property, which we can render it more equitable, and less inquisitorial, this can be effected.

## THE Income Tax collected in the Year ended 1861.

## ENGLAND AND WALES.

Now, if 56,571,654*l.* : 18,105,240*l.* :: 195,287,787,375*l.* : income is under 150*l.*, and above 60*l.*, from all the same proportion to those above 150*l.* as in 1801 (which should not), then the total income of Great Britain should be 257,787,375*l.* We consider that of this amount as the rents and profits of all realised property, lands, tenements, houses, constructions, funds, stocks, warehouses, docks, shipyards, railways, canals, public

*East India and South Sea stock, and the stock and shares of all companies whose stocks and shares are bought and sold in the market.*

PRO FORMA FINANCIAL SCHEME.

Having analysed the present system of taxation, we would propose the following simplification of the taxes upon the more sound principles which we consider practicable.

PRO FORMA VIEW of equalising the ANNUAL REVENUE and EXPENDITURE, presuming that the Excise and Assessed Taxes, and the Stamps on Marine and Fire Assurances, and also the Duties of Customs (except on eight articles) should be abolished, and adding Distilled Spirits and Malt, now under the Excise, to the Customs, and Excise Licences to the Stamps : abolishing all other of the Assessed Taxes, and the whole Excise Establishment.

	£
<i>First.</i> Assuming the total annual expenditure not to exceed . . . . .	50,000,000
Revenue, necessary to meet this expenditure, to be raised as follows :—	
I. From <i>uniform</i> duties on (1) Tea ; (2) Sugar and Molasses ; (3) Coffee and Cocoa ; (4) Tobacco ; (5) Distilled Spirits ; (6) Wines ; (7) Dried Fruits ; (8) Spices . . . . .	£21,500,000
II. Home Distilled Spirits . . . . .	£5,000,000
Malt, whether made at home, } or imported from abroad . }	5,000,000
	10,000,000
III. Stamps, leaving out Marine and Fire Insurances, and including Licences now under the Excise . . . . .	7,500,000
IV. Unredeemed Land Tax . . . . .	1,200,000
Deficit to be provided for during the first year . . . . .	9,800,000
	<hr/> £50,000,000

This deficit to be levied, not by doubling, or rather more than doubling, the present income tax, but by the less inquisitorial and more direct and equitable plan of an annual assessment, in the pound, upon the annual value of all realised property. And surely 11,000,000*l.*, including the unredeemed land tax, out of 50,000,000*l.* of total taxation, forms but a small proportion of the total sum to be levied directly. But if we may form an estimate, founded on the experience of the past, the ordinary sources of revenue would annually increase ; and the *amount of direct taxation* would be *proportionably diminished*, at least so long as peace shall continue. Finally, the direct taxation necessary would, we believe, not embrace more than the unredeemed land tax and a house tax, equal to the present window and other assessed taxes proposed to be abolished.

We could also show that the customs, including the security and collection of the duties on malt and spirits, now under the excise, might be conducted at less expense than at present ; and that, at all events, an amount of expense equal to that of the whole present excise establishment might be saved to the country.

We could also equitably modify the stamp duties, so as to produce a much greater revenue. The interest on exchequer-bills might also be saved, as in

Prussia, by the exchequer-bill office issuing paper, at all times a legal tender, as much so as Bank of

In our *pro formâ* view of fiscal reform, we have provided for during the first year at 9,800,000*l.*, or net rents and profits of all realised property. As we have taxes, and especially to the window tax, which we do simultaneously with the excise upon glass, we do not the amount of our proposed property tax : except

1. By substituting an additional tax on houses, this substitution, though very far less objectionable if we are to have a property tax at all, be, however, on other property.

2. By continuing other, though objectionable, material which, next to the essential food of man, is duty. But if the wisdom of Parliament will continue to adjust these duties upon pure fiscal principles ? Colonial timber have yielded a revenue of 1,691,325*l.* duties on colonial timber to 1*s.* per load, which selection, the revenue from timber of all kinds, including than 1,000,000*l.* If we should persevere in continuing should modify them to about the following proportions : load on white pine timber from the colonies, and on ble fir timber of the north of Europe ; and upon continue take these two duties fiscally, but not on any other scales, with a proportionate higher duty on deals : we might levy one million annually of revenue from revenue from corn, the duty on other articles yielding not to be abolished, are from copper ore, about 175,000*l.* Neither of the duties for revenue from The revenues from duties on corn, butter, and cheese

Therefore, we might save and realise, an additional

- |                    |  |   |
|--------------------|--|---|
| 1. <i>Save.</i>    | Interest on exchequer-bills due            | . |
| 2. <i>Realise.</i> | From timber                                | . |
|                    | From equalisation of sugar duties, a fifth | . |

This modification of our fixed scheme would reduce 9,800,000*l.* to somewhat under 7,000,000*l.*, or 28 per cent on all realised property without distinction.

The following table exhibits how our exports have increased upon the products and manufactures of which we have equalised differential duties, and reduced other duties with reference to our exports to France, the government

in favour of British produce or manufactures; while the British have equalised the duties on French and other foreign wines, and the duties on French silks, bronzes, clocks, watches, and all works of industry.

Statement of the declared Value of British and Irish Produce and Manufactures exported from the United Kingdom, specifying the various Countries to which the same were exported, in each Year from 1830 to 1844.

**CONCLUSION.**

The foregoing proposed reforms in the fin Kingdom are bold. Yet, we consider them not The tendency of public opinion is, yearly, incre dering the financial reforms made during the last to impede the progress of equitably reforming ou lation.

In accordance, therefore, with the principles which we have laid down, that country which possesses average advantages from nature, and whose population possesses the greatest industry, ingenuity, and intelligence, will, if unfettered from *legislative restriction upon labour, industry, agriculture, manufactures, navigation, and trade*, become, in proportion to its extent, resources, and advantages, the most flourishing country in the world; or, at least as prosperous as any other country, with equal natural, and moral advantages, and legislating upon equally liberal principles.

We believe that the United Kingdom possesses all the requisite advantages to become that, more happy country, which nothing but false legislation prevents; *viz., far more independent, prosperous, and far more rich and powerful; and, with the whole population far less poor, far better employed, more fairly paid for their labour, better sheltered, clad, and fed, and more independent than that, at the present time, of any other country in the world.*

The agriculture, the manufactures, the shipping, the foreign and colonial trade, and the power of the United Kingdom might, in their present stage, be viewed as only in their infancy, instead of being considered as having, before now, attained manhood, if those sound principles of fiscal, and commercial legislation, which we have attempted to elucidate, but which are not new, were boldly taken up, in order to be carried by the Imperial Parliament.

## II. COMMERCIAL LEGISLATURE OF AMERICA.

If England has made great advances, towards an equitable, and liberal system of commercial legislation, the Free and United States of America have actually retrograded from a system fiscally, and commercially, unsound in its origin, into the most wretched, and unenlightened schemes of customs duties: framed on the fallacious basis of protecting manufactures.

The numerous customs tariffs of the United States, would be discreditable to the most ignorant, and barbarous government; and, when we consider the intelligence of the citizens, and the condition of the country, when Congress first passed laws to impose duties on the importation of foreign commodities, we can only account for the blunders committed, by an hereditary attachment to the bad example of the mother country.

If any country was ever placed, by favourable circumstances, to legislate wisely, on sound commercial, and fiscal principles, that country was, and is, the United States of America.

In comparing the constitution, agreed to by this great republic, with that of the governments of other nations, we must remember, that when the Anglo-American colonies declared their independence, their moral and physical condition was very different from that of all republics, that had previously existed. The people were generally intelligent, and thoughtful; their habits frugal and

industrious ; and, unlike the Europeans of South America, from religious intolerance, and from the thralldom of custom.

The abilities of the men, who directed their country, were brilliant ; practical rather than experimental. They made the laws of the then most free government in the world ; theirs ; making a royal hereditary chief magistracy, and a national church establishment, the chief excellencies of their constitution.

The vast regions of their territory comprehended every climate under heaven. They were watered by numerous rivers and streams ; they abounded in useful woods and minerals ; they were indented with harbours ; and the shores, rivers, and bays, were fertile in fisheries. All these secured to them every natural advantage.

Their language and education enabled the people to acquire the English knowledge and literature, without the labor of learning, or paying for copyrights. They had also the earliest introduction of the arts and sciences, without the cost of purchasing foreign teachers.

With the good fortune, also, of being governed by wise and honest men, history, by honest men, they had the experience of centuries in their judgment.

Possessing, therefore, such extraordinary advantages, they were placed in a condition to avoid the blunders of European governments and laws of which, growing up from the experience of centuries, during centuries of bigotry, intolerance, tyranny, and oppression, of liberality and intelligence, were consequently in violation of personal liberty, and sound principles.

But with all these lights and advantages to guide them, in the course before them, erroneous views of commerce, and of the very principles of independence, which they declared, and frugal habits, like Washington and many others, and pure intentions, the idea, that in order to be peopled, and to produce at home, every thing required for food, clothing, and luxury. This fallacious principle has hitherto prevailed, and cannot be very long continued.

“ As early as August 14th, 1774, a convention was called, and were passed, signed by George Washington, Thomas Jefferson, and others, as follows :

“ *We do hereby resolve and declare that we will not import from Great Britain any goods, wares, or manufactures. We will turn our attention from the cultivation of such articles as may form a basis for domestic manufactures to encourage throughout this colony to the utmost of our power.*

This declaration, it must be remembered, was made in order to diminish her manufactures and trade, and to

coercing the colonies, far more, than for protection to home manufactures. For there was no prohibition of goods from Saxony, France, or other countries, which could send manufactures to America.

It is also a remarkable fact, that when a virtuous and, in other respects, a great man, like Washington, delivers a fallacious, and, at the same time, a specious opinion, such a blunder will be a thousand times more pernicious, than if pronounced by a profligate in power.

General Washington, in his message, in 1789, recommended to Congress the encouragement of manufactures, in the following words:—

“ Congress have repeatedly, and not without success, directed their attention to the encouragement of manufactures. The object is of too much consequence not to insure a continuance of their efforts, in every way that shall appear eligible. Ought our country to remain dependent on foreign supply, precarious because liable to be interrupted? If the necessary article should, in this mode, cost more in time of peace, will not the security and independence thence arising form an ample compensation?”

We do not, however, find Washington recommending high protecting duties, or prohibition. We would argue the contrary from the following maxims, in his parting address, on retiring from public life.

“ Observe good faith,” says he, “ and justice towards all nations; cultivate peace and harmony with all. Religion and morality enjoin this conduct; and can it be that good policy does not equally enjoin it? It will be worthy of a free, enlightened, and (at no distant period) a great nation, to give to mankind the magnanimous and novel example of a people always guided by an exalted justice and benevolence.

“ In the execution of such a plan, nothing is more essential than that permanent, inveterate antipathies against particular nations, and passionate attachments for others, should be excluded, and, that in the place of them, just and amicable feelings towards all should be cultivated.

“ The great rule of conduct for us in regard to foreign nations, is extending our commercial relations, and to have with them as little political connexion as possible. So far as we have already formed engagements, let them be fulfilled with perfect good faith. Here let us stop.

“ It is our true policy to steer clear of permanent alliances, with any portion of the foreign world; so far, I mean, as we are now at liberty to do it; for let me not be understood as capable of patronising infidelity to existing engagements. I hold the maxim no less applicable to public than to private affairs, that honesty is the best policy. I repeat it, therefore, let those engagements be observed in their genuine sense. But, in my opinion, it is unnecessary, and would be unwise to extend them.

“ Harmony, and a liberal intercourse with all nations, are recommended by policy, humanity, and interest. But even our commercial policy should hold an equal and impartial hand; neither seeking nor granting exclusive favours, or preferences; consulting the natural course of things; diffusing and diversifying, by gentle means, the streams of commerce, but forcing nothing; establishing with the powers so disposed, in order to give trade a stable course, to define the rights of merchants, and to enable the government to support them, conventional rules of intercourse—the best that present circumstances and mutual opinion will permit; but temporary, and liable to be, from time to time, abandoned, or varied, as experience and circumstances shall dictate; constantly keeping in view, that it is folly in one nation to look for disinterested favours from another; that it must pay with a portion of its independence for whatever it may accept under that character; that by such acceptance, it may place itself in the condition of having given equivalents for nominal favours, and yet of being reproached with ingratitude for not giving more. There can be no greater error than to expect or

*calculate upon real favours from nation to nation. It is an illusion which experience must cure, which a just pride ought to discard."*

President Jackson, in his message as late as the 4th of December, 1838, on alluding to the prosperous trade of the country, and to the relations of America with foreign courts—observes

"This desirable state of things may be mainly ascribed to our *undeviating practice of the rule which has long guided our national policy,—'to require no exclusive privileges and to grant none.'*

"Nor have we less reason to felicitate ourselves on the position of our political than of our commercial concerns. They remain in a state of prosperity and peace—the effect of a wise attention to the parting advice of the revered father of his country (Washington) on this subject, condensed into a maxim for the use of posterity by one of his most distinguished successors—'*to cultivate free commerce and honest friendship with all nations, and to make entangling alliances with none.*'"

The first act for raising a revenue by impost and protecting manufactures was passed July 4, 1789, and advocated by James Madison and others, headed—

"Whereas it is necessary for the support of the government, for the discharge of the debts of the United States, and *the encouragement and protection of manufactures*, that duties be laid on goods, wares, and merchandise imported."

Mr. Jefferson, who is generally called the father of democracy in America says, in his message, December, 1802 :—

"To cultivate peace and maintain commerce and navigation in all their lawful enterprises, and *to protect the manufactures adapted to our circumstances, are the landmarks by which to guide ourselves in all our proceedings.*"

And, in a letter dated January 9, 1816, says :—

"*We have experienced, what we did not before believe, that there exists both proficacy and power enough to exclude us from the field of interchange with other nations; that to be independent for the comforts of life, we must fabricate them for ourselves! We must now place the manufacturer by the side of agriculturist.* The grand inquiry now is, shall we make our own comforts or go without them at the will of a foreign power? He, therefore, who is against domestic manufactures, must be for reducing us either to a dependence on that nation, or be clothed in skins, and live like wild beasts in dens and caverns. I am proud to say I am not one of these. *Experience has taught me that manufactures are now as necessary to our independence as to our comfort; and if those who quote me as of a different opinion, will keep pace with me in purchasing nothing foreign, when an equivalent of domestic fabric can be obtained, without regard to difference of price, it will not be our fault if we do not have a supply at home equal to our demand, and must that weapon of distress from the hand which has so long wantonly wielded it.*"

The specious and fallacious opinions of Messrs. Jefferson and Madison, and those afterwards of Mr. Alexander Hamilton prevailed. Yet Franklin and many others delivered sound maxims on commercial legislation.\*

\* Those who advocate restrictions on foreign trade, and those who are opposed to such restrictions, may, or at least ought to, derive instruction from the sound and clear opinions of Benjamin Franklin, the most practical statesman and financier ever born in the United States.

"If," he observes, "the importation of foreign luxuries could ruin a people, we should, probably, have been ruined long ago; for the British nation claimed a right and practised it, of importing among us, not only the superfluities of their own production, but those of every nation under heaven; we bought and consumed them, and yet we flourished and grew rich. At present our independent governments may do what we could not then do, discourage by heavy duties, or prevent by heavy prohibitions, such importations, and thereby grow richer; if indeed, which

The sound maxims of Franklin and others were unrespected: but we have little hesitation in saying, that the fallacious commercial system of the United States, would not have been maintained, were it not for the example, as well as the conduct, of England towards America, after the acknowledgment, by the former, of the independence of the latter.

If the governments of England and America had been wise, when, and after, the crown of England had acknowledged the independence of the United States, they might have established, between both countries, as valuable, and important a commercial system, based altogether upon liberal principles and mutual interests, instead of upon jealous prejudices—as could have been maintained, if the regions now forming the United States, and the people constituting the citizens, had continued, as provinces, and as subjects of the sovereign of England.

Under a liberal commercial system, Great Britain might have enjoyed every possible trading advantage with the United States, which could have been desirable, or at least just, to possess, if they had continued under British domination. All these peaceable, and profitable, advantages might, assuredly, have been

may admit of dispute, the desire of adorning ourselves with fine clothes, possessing fine furniture, with elegant houses, &c., is not, by strongly inciting to labour and industry, the occasion of producing a greater value than is consumed in the gratification of that desire.

“The agriculture and fisheries of the United States are the great sources of our increasing wealth. He that puts a seed into the earth is recompensed, perhaps, by receiving forty out of it, and he who draws a fish out of our water, draws up a piece of silver.

“Let us (and there is no doubt but we shall) be attentive to these, and then the power of rivals, with all their restraining and prohibiting acts, cannot much hurt us. We are sons of the earth and seas, and like Antæus in the fable, if in wrestling with a Hercules we now and then receive a fall, the touch of our parents will communicate to us fresh strength and vigour to renew the contest.

“Several of the princes of Europe, having of late, from an opinion of advantage to arise by producing all commodities and manufactures within their own dominions, so as to diminish or render useless their importations, have endeavoured to entice workmen from other countries by high salaries, privileges, &c. Many persons pretending to be skilled in various great manufactures, imagining that America must be in want of them, and that the Congress would probably be disposed to imitate the princes above-mentioned, have proposed to go over on condition of having their passages paid, lands given, salaries appointed, exclusive privileges for terms of years, &c.

“Such persons, on reading the articles of confederation, will find that the Congress have no power committed to them, or money put into their hands, for such purposes; and that if any such encouragement is given, it must be by the government of some separate state. This, however, has rarely been done in America; and when it has been done, it has rarely succeeded so as to establish a manufacture, which the country was not yet so ripe for as to encourage private persons to set up; labour being generally too dear, and hands difficult to be kept together, every one desiring to be a master, and the cheapness of land inclining many to leave trade for agriculture. Some indeed have met with success, and are carried on to advantage; but they are generally such as required only a few hands, or wherein great part of the work is performed by machines. Goods that are bulky, and of so small a value as not well to bear the expense of freight, may often be made cheaper in the country than they can be imported; and the manufacture of such goods will be profitable wherever there is a sufficient demand.

“The farmers in America, indeed, produce a good deal of wool and flax, and none is exported—it is all worked up; but it is in the way of domestic manufacture, for the use of the family. The buying up quantities of wool and flax with the design to employ spinners, weavers, &c., and form great establishments, producing quantities of linen and woollen goods for sale, has been several times attempted in different provinces; but those projects have generally failed, goods of equal value being imported cheaper. And when the governments have been solicited to support such schemes by encouragements, in money, or by imposing duties on importation of such goods, it has been generally refused on this principle,—that if the country is ripe for the manufacture, it may

secured, without the unavoidable expense of governing, restricting, or overawing them.

The trade, and navigation, of the United States might have, in like manner, derived every commercial, and maritime, advantage that could have been, upon the most liberal understanding, obtained from the mother country, without being subjected to the, possible, incapacity of a colonial office ; to the maladministration of colonial governors, to the interference of a British parliament, or to the obstinate exercise of the sovereign prerogative. We lament that there ever should have been causes to warrant separation ; and we grieve that, when that separation was effected, the family relations between both countries were not established upon more just principles, and more kindly feelings. Unfortunately, wisdom did not pervade the councils of either England or America, upon the subject of international trade—during so favourable an opportunity, as the peace of 1783, for establishing the foundation of a commercial system, between England and America, which must have attained an unexampled magnitude :—a trade, and navigation, which would have formed durable bonds of friendship, and of peace,—which the reciprocal interests of the people of the one, and of the other, country, would render too powerful for any government to violate.

In justice to Mr. Pitt, we must absolve him from any share of illiberality in regard to such a commercial intercourse with the United States.

be carried on by private persons to advantage ; and if not it is folly to think of forcing nature. Great establishments of manufacture require great numbers of poor to do the work for small wages ; those poor are to be found in Europe, but will not be found in America till the lands are all taken up and cultivated, and the excess of people who cannot get land want employment.

"MAXIMS.—1. All food, or subsistence for mankind, arises from the earth or waters.

"2. Necessaries of life that are not food, and all other conveniences, have their value estimated in the proportion of food consumed while we are employed in procuring them.

"3. Fair commerce is where equal values are exchanged for equal, the expense of transport included. Thus if it cost A in England as much labour and charge to raise a bushel of wheat as it costs B in France to produce four gallons of wine, then are four gallons of wine the fair exchange for a bushel of wheat ; A and B meeting at half distance with their commodities to make the exchange. The advantage of this fair commerce is, that each party increases the number of his enjoyments, having, instead of wheat alone, or wine alone, the use of both wheat and wine.

"OF AN OPEN TRADE.—Perhaps in general it would be better if government meddled no farther with trade than to protect it, and let it take its course. Most of the statute or acts, edicts, or arrests, and placards of parliaments, princes, and states, for regulating, directing, and restraining of trade, have, we think, been either political blunders or jobs obtained by artful men for private advantage under the pretence of public good. When Colbert assembled some of the wise old merchants of France, and desired their advice and opinion how he could best serve and promote commerce, their answer, after consultation, was in three words only—'*Laissez nous faire* ;'—'Let us alone.' It is said by a very solid writer of the same nation, that he is well advanced in the science of politics who knows the full force of that maxim, '*Pas trop gouverner*,'—'not to govern too much ;' which perhaps, would be of more use when applied to trade than in any other public concern. It was therefore to be wished that commerce were as free between all the nations of the world as it is between the several counties of England ; so would all, by mutual communications, obtain more enjoyments. Those counties do not ruin each other by trade, neither would the nations. No nation was ever ruined by trade, even seemingly the most disadvantageous.

"Wherever desirable superfluities are imported, industry is excited, and thereby plenty is produced. Were only necessities permitted to be purchased, men would work no more than was necessary for that purpose."—*Franklin's Essays*.

In March, 1783, he brought into Parliament a bill for the temporary regulation of this intercourse.

By this bill vessels belonging to citizens of the United States were to be admitted into the ports of the West India islands, with goods, or merchandise, of American growth or produce; and they were to be permitted to export to the United States any merchandise or goods whatever; subject only to the same duties and charges as if they had been the property of British natural born subjects, and had been exported and imported in British vessels.

Violent opposition was made to this bill by the British shipping interest, headed by Lord Sheffield; and the Pitt administration being soon after dissolved, the bill itself was laid aside; and the power of regulating the commercial intercourse between the two countries was, by the succeeding administration, lodged with the king and council. By orders in council soon after issued, "American vessels were entirely excluded from the British West Indies; and some of the staple productions of the United States, particularly fish, beef, pork, butter, lard, &c., were not permitted to be carried there, even in British bottoms."<sup>4</sup>

But we must admit, that if there were an absence of wisdom, in respect to commercial policy, in the general, as well as in each state government, there was manifested in the policy of England a far more lamentable spirit. When Mr. Adams, the United States minister at the court of St. James's, proposed, in 1785, to place the navigation and trade between all the dominions of the crown of England and all the territories of the United States of America, upon a basis of perfect, and liberal, reciprocity, this generous proposal was not only positively rejected, but he was given to understand that no other would be entertained.\*

\* The British government refused to accede to this or any other commercial treaty. Mr. Adams, in his letter to the American Secretary of Foreign Affairs (Mr. Jay), dated London, the 21st of October, 1785, referring to this subject, says—"This being the state of things, you may depend upon it the commerce of America will have no relief, at present, nor, in my opinion, ever, until the United States shall have generally passed navigation acts. If this measure is not adopted, we shall be derided; and the more we suffer, the more will our calamities be laughed at. My most earnest exhortations to the states, then, are, and ought to be, to lose no time in passing such acts."

Some of the states passed acts of the character recommended by Mr. Adams; but the others not concurring, they were unavailing, and were repealed.

This was one of the principal causes of the adoption of the present constitution. The acts passed by the first Congress that met under the new form of government, imposing the discriminating tonnage, and other duties, did not escape the particular notice of British statesmen. Their injurious effects, upon the navigating interest of Great Britain, were at once perceived by them. They saw that American commerce was no longer at the mercy of thirteen distinct legislative bodies, nor subject to the control of the king and council. As early as the 30th of September, 1789, therefore, the acts imposing those duties were referred to the lords of the committee of the board of trade.

The same committee was afterwards instructed to consider and report, "what were the proposals of a commercial nature it would be proper to be made by their government to the United States."

In January, 1791, this committee made a report, not only upon the subject of the American duties, but also upon the general subject of the commercial relations between the two countries. This report was drawn up by Lord Liverpool; and on the subject of a commercial treaty, espe-

Instead of acting wisely, and scorning an offer which would have been so beneficial to the empire, it was, by strong sovereign will, decreed, that the full measure of stringency, provided for in the Navigation Act, should be extended to the ships, the trade, and the citizens of the United States.

In consequence of this wretched policy, on the part of the then sovereign and ministers of England, the government and Congress of the United States, on the adoption of the constitution, passed also a Navigation act, which, as regards British trade and shipping, contained the same provisions as the navigation law of England.

In 1789 a tariff of duties on foreign goods was imposed, upon the principle of creating, maintaining, and protecting domestic manufactures.

As a revenue tariff, this tariff was based on an utter disregard of fixed principles. It may be said to have been continued until 1816—meantime, what was the conduct of the government?

Foreign countries always complained of the British navigation laws; but during the war the circumstances detailed, in the first part of this article, rendered any countervailing legislation, on the part of European nations, of little injury to British trade or shipping. This circumstance did not, however, apply to the maritime and commercial relations between the British empire and the United States of America. These considerations, led finally to the adoption of the reciprocity system, which was first argued, and advocated, as well as the system of countervailing and protective duties, by the celebrated Alexander Hamilton.

In the American navigation laws, countervailing duties were imposed, upon all foreign vessels trading to the United States, of half a dollar per ton duty beyond what should at any time be paid by American ships (the duty was soon after doubled); and, further, that goods imported in foreign vessels should pay a duty of ten per cent over and above, what was payable on the same description of goods when imported in American vessels.

These countervailing duties were directed against the navigation of Great Britain, and grounded on the same principles as the British navigation laws. Various

cially in reference to *navigation*, it states—"After full consideration of all that has been offered on the subject of navigation, the committee think that there is but one proposition, which it would be advisable for the ministers of Great Britain to make, on this head, to the government of the United States, in a negotiation for a commercial treaty between the two countries, viz: that British ships, trading to the ports of the United States, should be there treated, with respect to the duties on tonnage and imports, *in like manner*, as the ships of the United States shall be treated in the ports of Great Britain."

The committee add, however—"If Congress should propose (as they certainly will) that the principle of *equality* should be extended to the ports of our colonies and islands, and that the ships of the United States should be *there* treated as British ships, it should be answered that this demand cannot be admitted, *even as a subject of negotiation*."

As to the advantages this circuitous trade would secure to British shipping, the same committee say—"Many vessels now go from the ports of Great Britain, carrying British manufactures to the United States; there load with lumber and provisions for the British islands, and return with the produce of these islands to Great Britain. The whole of this branch of trade," they add, "may also be considered as a new acquisition, and was attained by your majesty's order in council before mentioned, which has operated to the increase of British navigation compared with that of the United States."

measures to counteract the American system were devised by the British government, and they failed upon the principle of our continuing to maintain in full force the navigation laws. To all intelligent men it became evident that we had engaged in an unequal struggle, and that the real effect of our policy was to give a bounty on the importation of the manufactured goods of other countries into the United States, to the gradual exclusion, both of our manufactures, and ships, from the ports of America. By a commercial treaty agreed upon between Great Britain and the United States in 1815, it was stipulated that in future *equal charges* should be imposed on the ships of either country in the ports of the other, and that *equal duties* should be laid upon all articles, the produce of the one country, imported into the other, whether such importation were effected in the ships of the one or the other, and further that no higher duties should be levied upon the produce of, or manufactures, of the one, or the other, than upon the produce or manufactures of the most favoured nation.

This is usually considered the first English reciprocity treaty: but such is not the fact. Our early treaties with Spain and Denmark were reciprocity treaties: in the trade with which countries England, however, had always contrived to obtain the chief advantages.

The Americans continue to complain that, as far as the British colonial trade is open to them, although the letter of the treaty is extended to them, that the full principle of reciprocity is not faithfully observed: inasmuch as a British ship can carry a full cargo, or part of a cargo, from a British to a colonial port,—discharge the whole, or part thereof, there; then proceed, reladen, to any port in the United States, and from thence carry a cargo, from the United States, to any other part of the world: or, a British ship may sail with a cargo in the first instance from a British possession to the United States, — then with another cargo to a port in the United States,—there re-lade, and then proceed to any part of the world; while an American ship can only import a cargo direct from the United States to a British port; and although an American ship may re-lade in England and sail to any foreign port, it cannot sail from England to any British possessions:—the East Indian territories excepted.

We admit this legal inequality; and we are convinced that it would be for the interest of both nations to place the trade of every port in the United States, and every port of the British empire, for the ships of both countries, upon the footing of an unrestricted coasting trade. There is no one could deny the immense increase of the carrying trade, which, under a liberal tariff, would follow. The shipping of both countries, instead of being injured, would benefit by such a truly great measure. If the countries, constituting the United States, had continued to this day British possessions, this would have been the present state of the trade and navigation between those countries and every other part of the British empire. To deny this, would be the same as saying it would be wise, commercial, policy to place the navigation between the different ports of the United

Kingdom, and of those of British America and of the West and East Indies upon the same footing as the laws of trade and navigation with foreign ports. Why should not England and America now enjoy the most unrestricted mutual commercial advantages, when England has neither the expense nor perplexity of governing the American states, as colonies, and when the Americans have not the argument to urge of British subjection, interference, or menace?

Neither in England nor America has the consideration of this question received that grave, earnest attention, which the incalculable importance of international trade and navigation demands.\*

\* The late Mr. Condry Raguel, President of the Chamber of Commerce of Philadelphia, with thoroughly understood sound commercial and fiscal principles, quaintly introduces an article on the impolicy of countervailing duties, as follows:—

"In the twenty second chapter of the First Book of Kings, we read that Ahab, the King of Israel, invited Jehoshaphat, the King of Judah, to go with him to battle to Ramoth-Gilead, and that the latter consented to go, but at the same time expressed a wish that the former would consult his prophets as to the probable issue of the expedition. We further read, that in compliance with this request, Ahab consulted four hundred prophets, who assured him of victory; but that Jehoshaphat having doubts of the truth of their prediction, and suspecting, perhaps, that they were more of court sycophants and politicians than prophets, was not entirely satisfied with their reply. The following question will show the sequel:

"And Jehoshaphat said, 'Is there not here a prophet of the Lord besides, that we might inquire of him?'

"And the King of Israel said unto Jehoshaphat, 'There is yet one man, Micaiah, the son of Imlah, by whom we may inquire of the Lord; but I hate him; for he doth not prophesy good concerning me, but evil.'

"A dislike to hear the truth when opposed to one's interests or prejudices, has always existed in the world, and may be considered to be the cause of a large portion of the mischievous errors which so universally prevail. The fault of Ahab, recorded in the chapter referred to, is the fault of nine men out of ten at the present day, who, instead of applying to the source where truth is most likely to be found, with the honest intention of being guided by its dictates endeavour to find false prophets who will prophesy unto them '*smooth things*,' in order to confirm them in their preconceived errors, and minister to their ambition and avarice. Most especially is this true amongst the people of the United States, in reference to those two most important branches of knowledge, the science of government, and the science of political economy; and hence have arisen in the one case, parties which have no fixed principles of action, and in the other, a school of theorists, who propose to make a nation rich by the adoption of measures which can only produce an opposite effect."

Mr. S. G. Arnold, in an article on the absurdity of prohibitions and protection observes—

"This doctrine of saving money is one of those popular fallacies which are but too prevalent on the subject of *national wealth*. It should be remembered that commerce is an exchange of equivalents; an exchange which is equally beneficial to both parties. Now it makes no sort of difference whether this exchange is effected by means of money or of goods, as in either it is made *value for value*. If a man wants a hat more than he wants five dollars, he is none the poorer for parting with his money. The loss of gain, therefore, which would attend the home production of silk, must depend on something else beside the mere passage of money across the Atlantic.

"The hatter who should undertake to *save money* by making his own boots, would be regarded as a very poor economist; as every body knows that he could procure more boots by giving his undivided attention to his own business, and exchanging products with the bootmaker, than he could by dividing his time between boots and hats. So, as it regards the culture of silk—the *saving* to the country will depend on the fact whether more silk can be obtained by raising cotton, or wheat, or tobacco, than by cultivating mulberries and propagating silkworms. If it costs more to produce the silk than to procure it by exchange, it is clearly *no saving to the country*."

The liberal commercial policy, which was proposed by Mr. Pitt, on the part of England, and of Mr. Adams on the part of the United States, having been defeated by an adverse party in Great Britain, the adoption of a counterpart of the British navigation law was adopted and enforced by the United States, and persevered in to this day. Some relaxations have been made, however, towards those countries which treat American vessels upon more favourable terms than they are treated in British ports. An unsound tariff, on protective principles, was adopted by America; and revenue cruisers were built to enforce the United States customs laws—all in imitation of England. Steam revenue-cutters have since then been established to guard the coast against smugglers.

"Another fallacy, quite as common as the last, is, that protection is necessary to encourage *domestic industry*. Thus we often hear it asked, when articles of luxury are brought into the country for the rich, 'Why such men do not encourage *home manufacture*, and give encouragement to *domestic industry*?' At first view, this position may appear quite natural. But let us examine it a little more closely. These articles have been procured abroad in exchange for American products, and are therefore just as much the result of American industry as if they had been produced at home. Who will say that the labourer, who, at the end of the week, exchanges his wages for a coat, has not procured it by his own industry just as much as if he had fabricated it with his own hands?

"Further: let us suppose that a wealthy farmer of New York chooses to clothe his family in the richest kind of silk. He could do it in two ways. He might, 1st, employ a dozen men to plant mulberries, and carry on the manufacture on his own farm; or, 2nd, he might set these men to ploughing his fields and producing a crop of wheat. The wheat thus raised, he would exchange with a southern planter for cotton, and this cotton he would exchange with the French merchant for silk. Who will say that the foreign silk is not just as much the product of *American industry* as though it had been made directly by the labourers of the New York farmer?

"But it is said, again, that although under a protective policy, we may be obliged at first to ask a higher price for our productions; yet having once introduced them, they will, in the end, become cheaper by competition than before, and that we shall finally reap a benefit from protection. To this we answer, 1st, that if the soil, climate, &c., present natural obstacles to the production of any article, no competition can ever make it profitable; and, 2nd, that all things being as favourable as in other countries, except labour and capital, still, as no competition can ever reduce prices below the cost of production, and as these circumstances must continue to influence the cost of production while they remain, the protective policy can have no favourable effect in lowering prices.

"In a country like ours, where every thing is progressive, an article which may not be profitably produced now, may be profitably produced at some future time, when capital shall have become more abundant, and labour less productive. To attempt to anticipate that time by means of the forcing system of protection can never prove advantageous to a country, as it must inevitably be attended with public loss, and by injuring the accumulating capital of the nation have a direct tendency to put off that time to a more distant day.

"Besides, it must not be forgotten that our situation, located, as we are, some thousands of miles from the most producing nations, is itself a natural protection, and that this protection is still further increased by the duties which are required for the support of government. These give us an advantage without the special interposition of the state, which is quite sufficient to stimulate our enterprising citizens to the pursuit of wealth in every mode of industry which offers the least prospect of success.

"In short, we are fully satisfied that the only sure guide to wealth and prosperity is FREEDOM, entire and unrestricted FREEDOM. It is, we think, a great mistake for

governments to compel men into this or that mode of production. We believe it to be no part of their duty ; and it seldom fails of leading, in the end, to disaster and ruin. Under a system of free trade, men are guided by the instinct of their own interests, the cotton-planter, the wheat-grower, the manufacturer, the blacksmith, hatter, shoemaker, tanner, &c., all fix themselves in such situations as they believe will be most profitable to themselves ; and unless they greatly mistake their own interests, their efforts will be best calculated to produce the greatest amount of products to the country.

"The best protection, then, is the protection of all men in their persons and property—the protection of society by means of general education—and the protection of our flag wherever it shall be unfurled to the four winds of heaven. It is such protection which gives nerve to enterprise, spirit to industry, and wing to commerce ; and which is destined to carry forward our country in that mighty and glorious progress which has commenced with such Herculean and lofty strides."

The preambles of the two first revenue bills declared that they were imposed for protection and for revenue ; but the rates of duty did not really amount to great restriction.\*

The preambles, in fact, embrace no more than an erroneous deduction based upon the following passage, delivered by Washington on the 8th of January 1790, in his second annual message, viz.—

"A free people ought not only to be armed, but disciplined ; to which end, a uniform and digested plan is requisite, and their safety and interest require that they should promote manufactures as tend to render them independent of others for essential, particularly for military supplies. The advancement of agriculture, commerce, and manufactures, by all proper means will not, I trust, need recommendation ; but I cannot forbear intimating to you the expediency of giving effectual encouragement as well to the introduction of new and useful inventions abroad, as to the exertions of skill and genius in producing them at home."

On January 15th, 1790, the House of Representatives adopted the following resolution :—

"Ordered, that it be referred to the secretary of the Treasury to prepare and report to this house, a proper plan or plans, conformable to the recommendation of the President of the United States, in his speech to both houses of Congress, for the encouragement and promotion of manufactures as will tend to render the United States independent."

The secretary of the Treasury at that time was the celebrated Mr. Hamilton. A fallacy, if once entertained by a strong mind, enlightened upon most subjects and by a character of unimpeached integrity, cannot fail to be pernicious. Such was unfortunately the effect of the unsound views taken with undoubted patriotism and honesty of purpose, by Mr. Hamilton. His views, although not at first adopted, were ultimately sanctioned.

On the 5th of December, 1791, his celebrated report on manufactures was presented to the House of Representatives.

\* The preamble of this act declared : Whereas it is necessary, for the support of government for the discharge of the debts of the United States, and the encouragement and promotion of manufactures, that duties be laid on goods, wares, and merchandises imported—

SECTION I. *Be it enacted, &c.*

Notwithstanding the declaration of the preamble, that one of the objects of the bill was the promotion of manufactures, the bill gives earnest of no such intention. The recital became a compliment of peculiar emptiness when it was discovered that the highest *ad valorem* duties were fifteen per cent ; and these were imposed, not on rival manufactures, but on such foreign goods as a sumptuary law, which was strongly allied with the prejudices of the revolutionary system might be supposed to operate. Ten per cent was the average duty on foreign manufactures, and such a duty, it is manifest, savours far more of revenue than of protection.

On the 23d of January, 1792, the house came to the following order:—

*“Ordered, That the report of the secretary of the treasury, on the subject of manufactures, be committed to a committee of the whole house, on Monday next.”*

Protection, however, excepting so far as might be concealed under the revenue principle, did not receive the sanction of Congress.

On the 10th of August, 1790, before the presentation of Mr. Hamilton's report, the second revenue bill received the sanction of the president. The preamble declares:—

*“Whereas, by an act entitled ‘An act for laying a duty on goods, wares, and merchandises, imported into the United States,’ divers duties were laid on goods, wares, and merchandises so imported, for the discharge of the debts of the United States, and the encouragement and protection of manufactures: And whereas the support of government and the discharge of the said debts render it necessary to increase the said duties.”*

But this act, was in its scale of duties purely a revenue bill: and the increase of duties on foreign teas and coffees, on spirits and wines, and on those enumerated in the following clause, show that the principle of protection to manufactures was not introduced, except in the preamble:

*“On cabinet wares, buttons, saddles, gloves of leather, hats of beaver, felt, wool, or a mixture of any of them; millinery, ready made; castings of iron, and slit and rolled iron; leather, tanned or tawed, and all manufactures of which leather is the article of chief value, except such as are herein otherwise rated; canes, walking-sticks, and whips; clothing, ready made; brushes; anchors; all wares of tin, pewter, or copper, all or any of them; medicinal drugs, except those commonly used in dyeing; carpets, and carpeting; all velvets, velvets, satins, and other wrought silks; cambrics, muslins, muslinets, lawns, laces, gauzes, chintzes, and coloured calicoes and nankeens, seven and a half per cent, ad valorem.”*

In the following tariffs, which include all that followed previous to the year 1816, not only was the preamble free from allusion to the protective system, but the rates, although in some cases too high, were framed on the exclusive revenue requisitions:—

T A R I F F S.	Dates.	T A R I F F S.	Dates.

In consequence, of the war having nearly annihilated the revenue from customs, and of the debt incurred, which exceeded 100,000,000 dollars, on which there was 6,000,000 dollars annual interest. Mr. Dallas, secretary to the treasury, submitted a report to Congress, suggesting “That, in the year 1817, and annually in every subsequent year, there be appropriated the sum of 2,000,000 dollars, in addition to the sum of 8,000,000 dollars now annually appropriated, for the payment of the interest and principal of the public debt; that the payment of this additional sum be made out of the proceeds of the revenue derived from the customs, the sale of public lands, and the internal duties, or either of them, available after the payment of the sums for which they are now respectively pledged or appropriated; and that the said additional sum of 2,000,000 dollars annually be payable to the commissioners of the sinking fund, to be applied by them in the same manner as the moneys which they are now entitled by law to receive; that is to say—1st. To the payment of the interest on the public funded debt. 2nd. To the reimbursement of the principal, from time to time, as the same, or any portion of it, shall become reimbursable, according to the terms of the contracts by which it has been created. 3rd. After having answered these purposes, if there shall remain a surplus at their disposal, to the purchase of such parts of the public funded debt as shall appear to them to be most to the advantage of the United States,

in the manner prescribed by law, and at a rate not exceeding the maximum of revenue, which a tax on

In his opening message, Mr. Madison strongly urged debt, collateral to which, in order to carry all other par which "the necessities of the manufactures afforded."

On March 20th, 1816, the committee reported with some amendments, was sanctioned by the celebrated protective tariff of 1816.

SECTION I. *Be it enacted, by the Senate and House of* That from and after the 30th day of June, one thousand heretofore laid by law on goods, wares, and merchandise, cease and determine; and there shall be levied, and collected after mentioned; that is to say:—

A duty of twenty-five per centum, ad valorem, on hemp and German linens, Russia and Holland duck; stockings, articles manufactured from brass, copper, iron, steel, pew metals, or either of them, is the material of chief value buttons, button-moulds, and buckles of all kinds; gilt, plain cannon, muskets, fire-arms, and side-arms; Prussian blue porcelain, and glass manufactures, other than window glass,

A duty of twenty-five per centum, ad valorem, on wool of which wool is the material of chief value, excepting b stuff goods, shall be levied, collected, and paid, from and the 30th day of June, one thousand eight hundred and five centum on said articles; and on cotton manufactures, of the material of chief value, and on cotton twist, yarn, or t next ensuing the 30th day of June next, a duty of twenty after the expiration of the three years aforesaid, a duty of

A duty of thirty per centum, ad valorem, on car thereof; leather, and all manufactures of leather, or chief value; saddles, bridles, harness; paper of every d blank-books, parchment, vellum; brushes, canes, walking-sticks. And in all cases where an ad valorem duty shall be charged of the article at the place whence imported (exclusive of duty with the usual addition established by law, of twenty per places beyond the Cape of Good Hope, and of ten per cent other places.

The following duties, severally and specifically:—On per lb.; on untarred cordage, yarns, twine, packthread, and spermaceti candles, six cents per lb.; on Chinese cassia, six five cents per lb.; on cloves, twenty-five cents per lb.; on nut late three cents per lb.; on cocoa, two cents per lb.; on copperas, one dollar per cwt.; on copper rods, bolts, spikes, spikes, or nails, four cents per lb.; on coffee, five cents per on gunpowder, eight cents per lb.; on hemp, one dollar and wire, not exceeding No. 18, five cents per lb., and over No bars and bolts, excepting iron manufactured by rolling, forty rods, and hoops, two dollars and fifty cents per cwt.; and in rolling, and on anchors, one dollar and fifty cents per cwt lead in pigs, bars, or sheets, one cent per lb.; on shot made on red and white lead, dry, or ground in oil, three cents per on cigars, two dollars and fifty cents per thousand; on spirits cents per gallon; of second proof, forty-five cents per gallon; of fourth proof, fifty-two cents per gallon; of above fifth proof, seventy-five cents per gallon; on spirits and second proof, thirty-eight cents per gallon; of third of fourth proof, forty-eight cents per gallon; of fifth proof, fifty cents per gallon; on shoes and slippers and slippers of leather, twenty-five cents per pair; on shoe per pair; on spikes, two cents per lb.; on soap, three cents per lb.; on white, clayed, or powdered sugar, four cents per on loaf sugar, and sugar candy, twelve cents per lb.; on

one cent per lb. ; on tea from China, in ships or vessels of the United States, as follows, viz : bohea, twelve cents per lb. ; souchong, and other black, twenty-five cents per lb. ; imperial, gunpowder, and gomee, fifty cents per lb. ; hyson and young hyson forty cents per lb. ; hyson skin, and other green, twenty-eight cents per lb. ; on teas from any other place, or in any other than ships or vessels of the United States, as follows, viz. : bohea, fourteen cents per lb. ; souchong, and other black, thirty-four cents per lb. ; imperial, gunpowder, and gomee, sixty-eight cents per lb. ; hyson, and young hyson, fifty-six cents per lb. ; hyson skin, and other green, thirty-eight cents per lb.

Such was the first tariff, which was avowedly in principle protective ; a tariff which underwent modification afterwards, but which continued unsound in all its principles. With reference to the modifications of the tariff, Mr. Pitkin, a disciple of the protective system, observes:—

“ We would here observe that a *permanent duty* of thirty per cent *ad valorem* was imposed on various other articles ; and among these were hats, cabinet wares, and all manufactures of wood, carriages of all descriptions, leather and all manufactures of leather, and paper of every description. And to encourage the manufacture of domestic sugar, a specific duty of three cents per lb., was laid on all imported brown sugar.

“ Without adverting to the details of the various acts, afterwards passed, altering that of 1816, we would observe, that the duty on bar iron was raised in 1818, and that in 1824, the duties on woollens and cottons was revised ; and that by the act of that year, a duty of twenty-five per cent was laid on all woollen goods, the value of which should not exceed 33½ cents per square yard ; and after June 30th, 1825, a duty of 33½ per cent *ad valorem* was imposed upon those costing more than 33½ cents per square yard, with the exception of blankets and stuff goods.

“ Much more time, skill and experience are requisite in the various branches of the manufacture of wool, than in that of almost any other article, in order to meet, with success, more experienced foreign manufacturers.

“ In addition to the want of skill and experience, the American manufacturer of wool had to struggle with the countervailing laws and regulations of the British government, made with the express view of injuring this branch of American industry ; or, in the language of Brougham, ‘ to stifle it in its cradle.’ One of the countervailing measures of that government, was a reduction of the duty on imported wool. Prior to the American act of 1824, the duty on wool imported into England was sixpence sterling per lb. ; but soon after the passage of this act, this duty was reduced to one penny per lb. ; and for the purpose, as the debates in parliament show, of enabling the British manufacturer to send his woollens to the United States at a cheaper rate. And, not long after, with the same view, the duty on all wool, the price of which was less than one shilling sterling, was reduced to a half-penny.

“ The American manufacturer of wool,” says Mr. Pitkin, “ finding it difficult, if not impossible, to struggle against all these difficulties, again applied to Congress for aid ; and the celebrated Tariff act of 1828, was the result of this application—an act, which has been declared not only highly oppressive to the great mass of the community, and injurious to commerce, but in direct violation of the constitution itself.

“ By this Act, the minimum system was extended generally to woollens. All manufactures of wool, with some exceptions, the value of which did not exceed fifty cents the square yard, paid a duty on that sum, of forty-five per cent *ad valorem* ; these, the value of which exceeded fifty cents, but did not exceed 1 dollar the square yard, paid a duty of forty-five per cent *ad valorem* on the latter sum ; those between 1 dollar and 2 dollars 50 cents, the same duty on the latter sum ; those between 2 dollars 50 cents and 4 dollars, the same duty on the last sum, and those exceeding 4 dollars, fifty per cent *ad valorem*.

“ Unmanufactured wool was also subjected to a duty of four cents per lb. and forty per cent *ad valorem*. Additional duties were also laid upon iron, hemp, flax, and molasses ; and the minimum price of cottons was raised to thirty-five cents the square yard. The policy of this act was questioned by many of the merchants of this country, and its constitutionality by most of the people of the southern states. Unfortunately,

it was a compound made up by its enemies as well as its friends, and was not satisfactory to either.

"The time was now approaching, when the national debt, being nearly extinguished, the sinking fund, amounting to 10,000,000 dollars annually, would be no longer wanted. A new modification of the revenue system, would soon be necessary, to meet this state of the financial affairs of this country. In this modification of the duties advocates of the protecting system, contemplated a reduction of the duties principally those articles, which had not been, or could not be, produced in this country; while opposers, on the other hand, insisted on an abandonment of the system itself, by making the duties on all imports about equal. With a view of obtaining information enlightening the public mind on this great and interesting subject, two Conventions were held, in the summer and fall of 1831; one in the city of Philadelphia, called the tariff or free-trade convention—the other at the city of New York, called the tariff convention. Both were composed of gentlemen distinguished for talents and experience; and their addresses to the people of the United States, and memorials to Congress or as they may be called, essays expressive of their different views of the question of political economy then agitated, were drawn up with no ordinary care and ability and must always take a high rank among the state papers of that period. Under the influence of these conventions, Congress, after much debate, proceeded to modify the preceding tariffs, by an act of the 14th of July, 1832, to take effect after the 1st of March, 1833. It was called the Compromise Act; and the Tariff on a decreasing Scale."—*Pitkin's Statistics of the United States*.

This modified tariff will clearly appear to be based upon false principles: those maintaining and creating home manufactures by a tax of at least from twenty-one per cent. a half to twenty-nine per cent, exclusive of other charges, on the value of all the cotton, woollen, and linen manufactures worn by, and on most articles of iron and other metals used by, all the citizens of the United States.

To prove this beyond any shadow of dispute, the manufactured, and all other articles not likely to compete with those of the United States, were either admitted duty free at very moderate duties.

The duties levied under the tariff, in existence previous to the 14th of July, 1832, were avowedly directed against the admission of foreign manufactures in order to protect those of the United States. The duties were:

	Per cent
Cottons, white, valued per square yard under thirty cents, duty ad valorem	10
Cottons, coloured, valued per square yard thirty-five cents	15
Woollen manufactures, value less than eight cents per lb.	10
Woollen manufactures, value exceeding eight cents per lb.	15
Woollen cloths milled, all kinds, and flannels	10
Nails, value five cents per lb.	10
Bar iron, rolled	10
Ditto, hammered	10

The above duties were, by Mr. Clay's bill, to be reduced gradually every two years until the whole are diminished to twenty per cent, ad valorem in 1842.

The following articles were to be reduced from high duties to the following:—

"Articles manufactured, as exceptions to the foregoing, and others on which the high or protective duties were levied in the old tariff, viz.: slops or made up clothing, hosiery, bags of wool and cotton, kendals of cotton and wool, blank books, waste card glass manufactures, pianofortes, artificial flowers, copper and brass manufactures, ironmongery, cutlery, tin and pewter wares, except tools, fire and side arms, carvings of all descriptions, mathematical instruments, fishing nets, brushes of all kinds, saddles, shoes and boots, and nearly every article into which cotton, wool, hair, iron, copper enter into the manufacture, to be admitted twenty-nine per cent maximum, twenty per cent medium, and twenty-one and a half per cent minimum, *ad valorem* duties.

"The following articles to be admitted at the enormous duties annexed:

"Paper for writing, printing, &c., fifteen to twenty-five cents per lb., or 7d. to 1s. per

" Books printed in the English language, bound, thirty cents, or 1s. 2d. per lb., unbound, twenty-six cents, or 1s.  $\frac{3}{4}$ d. per lb.

" Felt hats, eighteen cents the lb.

" Cordage, four to five cents the lb.

" All silk manufactures are admitted *duty free*, except silks from beyond the Cape, at ten per cent.

" Ditto raw, twelve and a half per cent.

" Ditto, sewing (or silk thread) twenty-six per cent.

" Sugar and distilled spirits are admitted at very moderate duties, which among the many other low rates and duty-free articles, prove how little fiscal considerations have entered into the principles of this tariff.

" Wines are also admitted, especially those of France and Germany, at little more than nominal duties; but discriminatory duties are imposed on those of Spain and Portugal.

" The following among many other articles are exempt from duty:—

" Acetates, acids nearly of all kinds, almonds, aloes, adhesive, and other plasters, ambergris, alabaster and marble figures, argol, barilla, bamboos, bark of all kinds; balls, dice, &c., of ivory; black pepper, bees'-wax; brass in plates, bars, and pigs; brimstone and sulphur, brazil-paste, bones, teeth, and manufactures of ivory, burgundy-pitch, bronze casts and busts, calomel, camomile flowers, camphor, cantharides, capers, cassia, castanas, catsup, chalk, chemical preparations and oils nearly of all kinds, cinnamon, cloves, cochineal, cocoa, and coffee, coculus indicus, copper for sheathing ships, coral, corks, corrosive sublimate, coryander seed, crude saltpetre, currants, cutlasses, daggers, dates, dirks, dolls of wax, if undressed, drillings of pure flax, epaulettes of gold and silver, figs, filberts, filtering stones, fish-sauces, fisheries of United States, flax and hemp unmanufactured, frankincense, ginger, grapes, gamboge, gum-arabic and other gums, hair and wool, hair pencils, hats of palm leaf, hemlock, hemp and flax seeds, henbane, bones, honey, hops, horns of all kinds and tips, horn plates for lanterns, ink, ipecacuanha, India rubber, models of inventions and machines, isinglass, ivory-black; ivory manufactured, except combs; juniper berries, lac-dye, lead ores, linseed cake, mace, madder and its root, macaroni and vermicelli, marble, Manilla hemp, preparations of mercury, mill-stones, models of all kinds, musk, nutmegs; nuts and berries used in dyeing, and of all kinds; oakum; oil of juniper, and all oils except fish-oils and perfumed oils; olives, opium, paintings and drawings, phosphorous, pimento, pipes of clay for smoking, prunes, putty, quicksilver, quills prepared, quadrants, raisins in jars and boxes and all others, rattans unmanufactured, reeds manufactured, rhubarb, rotten-stone, saffron, saltpetre, sago; skins and hides raw, and not made up or tanned; sextants, smalts, shellac, slate-pencils, sponges, spy-glasses, skins of all kinds for musical instruments, sumac, succory, tamarinds; tartar, viz., crude; tea, all kinds, imported in United States vessels from beyond the Cape of Good Hope; telescopes, tinfoil, tin in plates and sheets, tortoise-shell, tar from coal only, turmeric; vegetables, such as are used principally in dyeing and in composing dyes and drugs; vitriol blue, fancy wood of all kinds, woad or pastel, water colours, weld, and all articles used principally for dyeing, coming formerly under the duty of twelve and a half per cent.

" All other dyeing drugs and materials for composing dyes; all other medicinal drugs and all articles not enumerated in this act, nor the existing laws, and which are now liable to an *ad valorem* duty of fifteen per cent, all to be free, with a few exceptions at duties, from one to fifteen per cent the highest."<sup>\*</sup>

This tariff was not based upon sound fiscal principles.† It was a *blundering*

<sup>\*</sup> Moderate calculations have rated the tax imposed by these tariffs on the whole community in order to encourage the manufacturers, at 48,000 dollars per annum. Goods of all kinds cost, in order to afford a home market for home manufactures, about 100 per cent above the fair price.

† The duties in this bill, though much diminished, were highly protective; *thirty per cent* on most woollen manufactures; on cotton manufactures twenty per cent. Mr. Pitkin defends the New England states as follows—

" We cannot but observe, however, that in the conflict of opinion which has arisen on this question, New England has been placed in a peculiar, and we may add, unfortunate situation.

*compromise between monopoly and free trade.* For the time, however, it removed all the perplexing and formidable difficulties of nullifying the Union. But, when its maximum duties were to come into operation, a new policy was adopted in 1842, carried by the spirit of party, much more than by the influence of the manufacturers. The result was the monstrous tariff of that year, printed in a previous part of this work.

A new tariff was prepared in 1844, upon a greatly diminished scale, by the Committee of Ways and Means, of which Mr. Mackay was chairman. The report which accompanied it was drawn up with great clearness and ability. It dwells forcibly on the evils to all classes of frequent changes in the tariff, as well as to the revenue, and reverts to the tariff of 1828, which even the advocates of the manufacturing interests styled the "Bill of Abominations."

The Committee "consider the lowest possible duty necessarily protective, to its extent, though it may be imposed with the single view to revenue, and may be a revenue duty, in the strictest sense of those terms. Commencing at this point, they think that the duty upon any given article should be considered, and is properly called, a revenue duty, so long as an increase of the rate will increase the amount of revenue derived from the importation of the article. This conclusion is based upon the simple fact, that, up to this point, the way to increase the revenue from the given article is to raise the rate of duty; and, although the degree of protection afforded by the duty is increased with the increase of the rate, yet that is an incident, and an unavoidable incident, and cannot change the nature and character of the duty, as a duty to raise, to increase revenue. Pass that point, and raise the rate of duty so high that its prohibitory action diminishes the amount of revenue collected under it, and its character is changed. The protection afforded by it is increased, while the revenue it yields is diminished; thus giving protection as its chief fruit; and revenue as the incident. Continue to raise the rate until the prohibitory action of the duty becomes perfect, all importations of the article cease, and no revenue is realised from the duty. Then, certainly, it cannot be considered or called a revenue duty, and its exclusive object must be protection. It must be, therefore, a protective duty, in the strict sense of the term; and, in the opinion of the committee, it is clearly entitled to that appellation from the point where its prohibitory became paramount to its revenue powers, and its increased rate ceases to increase the amount of revenue collected under it. This conclusion is founded upon the equally simple fact, that, at this elevation, the way to increase the revenue is to diminish the rate of

She has been accused of being the author and supporter of the system; and on that account, towards her have been directed some of the keenest shafts of reproach and calumny. Whatever of good or evil there may be in the system, New England was not its author.

"In 1816, it is well known that she voted with the south, and against New York, New Jersey, Pennsylvania, and the western states, on the great question of the extent of protection to be afforded to the manufacture of cotton.

"The committee who reported the tariff bill of that year, recommended a duty of thirty per cent on all imported cotton goods; and on the question of reducing it to twenty-five, nearly two-thirds of the New England members in the house voted for its reduction, while out of forty-one members from New York, New Jersey, and Pennsylvania who voted on the question, nine only were in favour of it. The question of reduction was therefore, carried by the New England votes, joined with those of the south.

"On the tariff of 1824, the votes of New England states were fifteen for, and twenty-one against, it, while those of the states of New York, Pennsylvania, New Jersey, Kentucky, and Ohio, stood seventy-eight for, and nine against; and on the tariff of 1828, the votes of the former were sixteen for, and twenty-three against, and those of the latter stood eighty-four, and only six against it. Some of the New England votes on the tariff of 1828, were probably governed by the details of the bill."

duty. The power 'to lay and collect duties' has been carried beyond its object of obtaining revenue 'to pay the debts, and provide for the common defence and general welfare of the United States;' and a reduction of the rate of the duty only will restore the exercise of the power to that object. The understanding of this committee, therefore, is, that, while every duty is necessarily protective to its extent, yet every duty is to be considered, and is properly denominated, a revenue duty, the rate of which yields the largest amount of revenue from the importation of the article upon which it is imposed, or the rate of which is below that point, so that an increase of the rate would produce an increase of the revenue; and that every duty is to be considered, and is properly denominated, a protective duty, the rate of which is so high as to diminish the amount of revenue derived from the importations of the article upon which it is imposed, and the rate of which requires to be reduced to increase the revenue. And when a given amount of revenue is desired to be raised upon any given article of importation, the committee regard the lowest rate of duty which will effect the result as the true and legitimate revenue duty.

"This will show what description of a law the committee would denominate a revenue, and what a protective tariff; and to what extent they would give the one character or the other to any given law. The protection afforded under a revenue tariff, thus defined, they would denominate incidental; and, if the revenue be required, they cannot see that the consequent protection can be a subject of grievance or complaint on the part of any interest. The protection afforded by a protective tariff, according to the same definition, is direct and positive; operates to diminish or destroy the revenue; and constitutes, as the committee believe, an exercise of the power to lay and collect duties entirely indefensible in principle and policy, and often furnishing broad ground for just complaint. The terms 'perfect protection' the committee understand to be synonymous with perfect prohibition; and, therefore, entirely destructive of all revenue, because prohibitory of all importations.

"The terms 'free trade,' in their broad sense, the committee understand to be equally inconsistent with the idea of a revenue from imports, because they suppose that trade, which is perfectly free, cannot be burdened with any duties not imposed to furnish facilities to itself. In this sense, they are assured the phrase is understood in some portions of the country, when used in connexion with legislation of this description; and the advocates of a system of free trade are supposed to be also advocates of a change of one system of revenue from duties on imports, to internal taxation, direct and indirect. The committee believe that, if any hold these views, much the largest class of those who call themselves friends of free trade do not attach to the terms any such extent, and only intend to be understood, by the free trade they advocate, so much freedom of trade as may be enjoyed under a system of duties arranged with sole reference to a supply of the public treasury, and the rates established as low as the economical wants of that treasury will allow."

\* Mr. Mac Duffie's speech in the senate is remarkably clear and conclusive on the tariff questions: those of his opponents, especially that of Mr. Evans, most fallacious yet specious. They consider that, as manufactures have arisen in the United States, it must be owing "to protection." The story over again of the pyramids of Egypt existing; consequently the fertility of the valley of the Nile.

Mr. Mac Duffie insists that the tariff law of 1842 should be called an act to *prevent*, instead of an act to *provide* revenue. He says: "It is entitled an act to *provide* revenue—falsehood and deception stamped on the very front of it. A bill to *provide* revenue! which lays an average duty of a hundred per cent on several descriptions of imports that would come into the United States, to the amount of about 40,000,000 dollars annually, under a revenue duty of twenty per cent, but which are now totally excluded by these enormous duties. I will not go into details, but state generally, that the duties on window-glass range from ninety-four to a hundred and seventy-eight per cent, making an average of more than a hundred and fifty per cent on all descriptions; that the duties on many varieties of manufactured iron, embracing most of the tools and implements necessarily used on every farm and plantation in the country, are from seventy-five to a hundred and fifty per cent, and more *ad valorem*; that the duty on raw iron, an article in universal use, is 112½ per cent; that the duty on all those cotton manufactures which come under the *minimum* principle of valuation (and which would be imported annually to the amount of 10,000,000 or 15,000,000

"Mr. Benton, in the senate in 1844, takes a middle ground, and sets out with contrast of the two systems of duties—that of duties imposed wholly for revenue, as that of duties imposed for the mixed objects of protection and revenue. In this case

dollars, under a revenue duty of twenty per cent), range from sixty to a hundred and fifty per cent on their true value; that the duty on salt—an article of universal use, consumed in almost equal quantities by the rich and the poor, and extensively consumed by every farmer, not only for family purposes, but ten times more extensively for his live stock—is eight cents per bush (the article costing only five or six cents in Liverpool), equal to 133½ per cent on the original cost."

He says—"A large proportion of the prints and calicoes consumed in the United States, and which every female of the middle and poorer classes is a consumer, cost, in Manchester, from one to twelve cents a yard; but they are charged with duties of from seventy-five to a hundred and fifty per cent by the ingenious contrivance of an artificial and false valuation."

We now come to a very interesting part of Mr. Mac Duffie's argument, that relating to "discrimination." After denouncing the tariff law of 1842 as an imposition of unrighteous burdens, not for purposes of revenue, but for taking money out of the pockets of one class of the community and putting into those of another, he says—"An idea has got abroad—and I am sorry to say that many of the friends of free trade have been deceived and betrayed by it, as many patriot-soldiers have been by the holding out of false colours—an idea has obtained currency that, although we cannot impose duties for any other purpose but that of revenue, yet you may rightfully impose revenue duties, 'with a wise discrimination for the protection of domestic manufactures.' This is part of the new system of tactics to which the manufacturers have found it necessary to resort. They say one thing, and mean another. What do they mean by 'a wise discrimination'? Obviously a discrimination that will exclude imports and diminish revenue. 'A wise discrimination.' Pray, what is your whole system of revenue—levied, as it is, exclusively from duties on imports—but an enormous discrimination in favour of the manufacturers and their confederates, and against all other classes?"

Mr. Mac Duffie next takes up the allegation that protection means the protection of domestic industry against foreign industry; and he argues at much length, and gives numerous illustrations, to prove that protection induces a conflict between one branch of domestic industry and another, and that there can be no competition between foreign industry and domestic industry, where there is only an exchange of labour for labour. He regards the protective policy of the last twenty years as destructive of half the commerce of this country, comparing what it is with what it would be for this policy; and yet what is left has to sustain the government, yielding all its revenue as it has done from the beginning; but it is now rapidly verging to extinction, for Europe will not, and cannot, purchase the exports of this country, if its productions will not be received in exchange. While thus steadily advancing the suicidal policy of destroying commerce, 9,000,000 dollars are asked to support a navy, the only use for which is the protection of commerce. "Against whom," exclaims Mr. Mac Duffie, "is a navy required to defend our Atlantic commerce? Against pirates? Against foreign power? Against Great Britain?—for she is the raw-head and bloody-bone always invoked to silence opposition against wasteful expenditure. As a producer of the great staple on which it (commerce) is mainly founded, I declare, with all solemnity, that I regard the Congress of the United States, as it has been constituted for the last twenty years, as more to be dreaded than all the powers of Europe combined, and all the pirates that ever infested the ocean."

He combats a doctrine, promulgated some years ago, and still held up in favour of protection, that it is necessary to relieve this country from the payment of a tribute to foreign nations. It was first broached by Mr. J. Q. Adams, when president, in one of his messages to Congress. Now what is the fact? The tribute is paid to home manufacturers, not to foreigners for the latter offer to supply their goods at from twenty to forty per cent cheaper than the home manufacturer, and in exchange too, for the productions of American labour.

"When," observes Mr. Mac Duffie, "you have prohibited the importation of manufactures from Europe, you will have totally destroyed the demand for six-sevenths of our cotton, rendering it utterly valueless."

Mr. Mac Duffie's object was to restore the Compromise Act, and his bill was as follows:—

Sec. 1. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That so much of the existing law imposing duties upon foreign imports as provides that duties ad valorem on certain commodities shall be assessed upon an assumed minimum value, be, and the same is hereby, repealed; and that said duties be hereafter assessed on the true value of such commodities.

Sec. 2. *And be it further enacted,* That in all cases in which the existing duty upon any imported commodity exceeds thirty per centum on the value thereof, such duty shall hereafter be reduced to thirty per centum ad valorem.

trast, he divides the half century during which the government has existed, into two periods of twenty-five years each; the tariff laws of the first period, having revenue for the object, protection being the incident; and those of the second period, having protection for the object, revenue being the incident. A striking difference he points out in these two systems; first, in the amount of duty imposed, and next, in the mode of assessing or computing it. Before the late war, the rate of duty, whether *ad valorem* or specific, was always moderate, never prohibitory, and uniformly laid on with a view to the production of revenue. Since the war, duties have often been exorbitant or prohibitory, and rendered still more exorbitant by the mode of computing them on the assumption of fictitious values.

"During the first of these periods, harmony and happiness prevailed among the industrial classes; the career of labour, in all its branches, was progressively prosperous; the word *tariff* was never heard of; the incidental protection afforded by the absolute wants of the government, was quietly and silently encouraging the growth of manufactures as fast and as steadily as could be justified by the wants of the community; and the great mass of the people was in the happy condition of Molière's country gentleman, who had talked prose all his lifetime without knowing it. To those good old times, Mr. Benton wished to return; to the object and structure of those good old laws, and to the enjoyment of their happy consequences. He disapproves of the *horizontal principle* of the Compromise Act, and is not, therefore in favour of recreating that law; he avows himself in favour of discriminating between articles of luxury and necessity, making luxuries pay highest; he is for discriminating between articles made at home, and those not made at home, putting the highest duties on the foreign rivals of our own products; but he insists on some limitation, in effect, that no duty, whether *ad valorem* or specific, shall exceed 30 or to 33½ per cent. This discrimination and incidental protection he had always advocated. It was admitted by good free trade authorities, as was proved by the South Carolina legislative report of 1828, by the Philadelphia free trade address of 1831, and by the Virginia democratic address of 1839. In a word he was for returning to the system which had worked so well anterior to the late war, when the specific duties rarely exceeded a fourth, or at most a third of the value, and when the *ad valorem* duties ranged only from five to fifteen per cent. The specific duty of 33½ per cent to which he is willing to go for protection, is, in effect, he argues fifty per cent; for the expences of importation being 7½ per cent, and the importing merchants' profits and charges 12½ per cent, these sums, besides the 33½ per cent duty, have to be added to the first cost abroad, before the imported article can come into our market in competition with the home-made article, and on this issue, he and his friends are willing to go to trial before the country.

**Sec. 3.** *And be it further enacted*, That from and after the 31st day of December next, all duties upon foreign imports shall be reduced to twenty-five per centum; and, from and after the 31st of December, 1844, to twenty per centum *ad valorem*.

It was defeated by the following resolutions, introduced by Mr. Evans:—

*Resolved*, That the bill entitled "A bill to revive the act of the 2d of March, 1833, usually called the Compromise Act, and to modify the existing duties upon foreign imports in conformity with its provisions," is a bill for raising revenue within the meaning of the 7th section of the 1st article of the Constitution, and cannot therefore originate in the Senate: therefore

*Resolved*, That it be indefinitely postponed.

In support of his assertions, with regard to the comp  
Mr. Benton submitted the following tables:—

The third table shows that the same ratio of reve  
in Mr. Jefferson's time, would, in the present day, y  
46,250,000 dollars. Mr. Benton says—' These tables  
be misunderstood, and they place in the strongest  
systems during the two periods; the beauty and adva  
of the other, standing out in the boldest relief. In the  
steadiness of the product and regularity of the incre  
second period, all this is reversed; confusion and mad  
Sometimes millions too much—then not half enough.  
tributed—then deficits to be supplied. Giving away

the next. Always a feast or a famine—never the right thing. Our poor treasury became a balloon—sometimes soaring above the clouds—then dragging in the mud—now bursting with distension—now collapsing from depletion.'

"Again, after quoting Mr. Jefferson's last annual message to Congress, showing the prosperous condition of the treasury at that time, Mr. Benton says—'Such was the working of the low duty system—ample and steady revenue—no loans, no taxes, no paper money—33,500,000 dollars of public debt paid in eight years—a surplus of 14,000,000 dollars left in the treasury—the result, not of lands exchanged for paper, but the regular result of steady revenue, strict economy, and hard money. How different from the state of things under the high duties of the present day! Instead of paying above 30,000,000 dollars of public debt in eight years, we have created near 30,000,000 dollars in four years; instead of a surplus in the treasury, there is a deficit; loans and taxes are the order of the day; and, to crown all, we have an illegal and fraudulent issue of federal paper money currency, issued by executive power, and sustained by bank alliances. Such is the difference between the working of the two systems after twenty-five years trial of each!'

"With regard to the second proposition, that of the superiority of low duties over high duties, in relation to their effect upon agriculture and commerce, Mr. Benton takes the ground that these two interests go together, the state of the one being an index to the other. The exports make the imports, and agriculture is at the bottom of the whole. He contrasts the exports of the two periods—that before the late war, and that succeeding the war—with a view of showing that, in consequence of the high duty system, with a population of 18,000,000, in 1842, we exported less than we did in 1807, with a population of 7,000,000, under the low duty system. In support of this, he adduces the following tables:—

TABLE of Foreign and Domestic Exports from the United States, from 1791 to 1807.

YEARS.	Exports.	Population.	YEARS.	Exports.	Population.
	dollars.	number.		dollars.	number.
1791.....	19,012,041	4,000,000	1800.....	70,971,780	5,340,000
1792.....	20,753,096		1801.....	94,115,925	
1793.....	24,100,572		1802.....	72,403,160

1830.....	73,840,508	12,866,000			

"As there is, in making out tables of this kind, an apparent intricacy, so far as regards re-exports, it is proper to give Mr. Benton's explanation, that, in comparing the two periods, it makes no difference whether the re-exports are included or not. He says, 'I fully understand the nature of our neutral position during the wars of the French

Revolution, and the effect which that neutrality had in promoting imports for re-exportation. We re-exported much from 1791 to 1807, and have re-exported exactly as much from 1817 to 1844! Mexico, South America, and the West Indies, have opened new markets for our re-exportations; and it is a fact, proved by the custom-house returns to be the same; 520,000,000 dollars are, as near as I can ascertain from the most careful research, the amount of re-exportations for each period; so that, in a comparison of the foreign trade in each period, they may either be both omitted or both included, as the speaker pleases. Finding them included in the tables, I choose to use them in that way. The table of revenue has already settled the question in favour of the large amount of foreign goods which remained in the country for consumption. Duties were only paid on the amount so remaining; and a revenue of 16,000,000 dollars, or 17,000,000 dollars from customs, with the low duties then paid, show that the importations for home consumption were greater then than now.'

"Assuming the average exports of the present day to be 100,000,000 dollars, Mr. Benton says, take from this sum the article of cotton, now forming two-thirds of our exports, and contrast the balance with that of the exports of 1807, when cotton formed an inconsiderable item, *and an immense falling off will be apparent in our exports of agricultural products.* Had our exports not been checked by the high duty system, affecting imports, and had they been allowed to increase, in the ratio of the increase of population, to that increase would have been superadded the item of cotton; so that, when all this is considered, Mr. Benton says, 'the decline of agriculture, and of the foreign commerce founded upon it, becomes appalling. Leaving out cotton, and the agricultural exports are less now than they were in 1808. They then amounted to 48,000,000 dollars; they only amount to about 100,000,000 dollars now, of which cotton is near two-thirds.'

"In relation to imports, Mr. Benton says, 'After this exposition of our exports under the protective system, it is hardly necessary to trouble the Senate with any detailed view of our imports during the same period. They are obliged to partake of the same character, and such is the fact. They have risen as high as 190,000,000 dollars; they have fallen as low as 64,000,000 dollars; and they have plunged and floundered backwards and forwards at all amounts between these two wide extremes. They are now at about 100,000,000 dollars, which is less than they were at thirty years ago.'

"Mr. Benton next proceeds to his third proposition—that manufacturers were flourishing and prosperous before the late war; and would, under the old system of duties have so continued. To show their standing at the close of his first period of twenty-five years, he refers to the census of 1810; in which, however, he states, many imperfections occur, which induced Congress to pass a joint resolution on the 19th of March, 1812, directing the secretary of the treasury, Mr. Gallatin, to have the returns digested and perfected. For this purpose Mr. Gallatin employed Mr. Tench Coxe, of Philadelphia, an eminent advocate of manufactures and a writer of twenty-seven years' standing. He took two years to verify his statements, and after great labour and care presented them. From his report Mr. Benton read several passages, in which it appears that the manufactures of the United States in 1813, with a population of 8,000,000 amounted to 200,000,000 dollars, advancing at the rate of twenty per cent per annum. Here, says Mr. Benton, 'are two striking facts, that manufactures had been advancing at the rate of twenty per cent, and that they amounted to 200,000,000 dollars in a population of 8,000,000. Population was only advancing at the rate of three per cent per annum; foreign commerce was only increasing at a moderate rate; agriculture was steadily but moderately advancing; but manufactures were going ahead of all other interests, advancing twenty per cent per annum, before protection was invented, and before politicians had taken it into their heads to become their patrons. Mr. Coxe, too, in his report, compares the condition of manufactures at that time, with their condition in England at the nearest approximate period of time in which its population was at the same standard; and the result is, that England proper, in 1787, having a population of 8,500,000, had manufactures, after taking 500 years to bring them to the perfection they then had attained, amounting to 266,000,000 dollars. Here was a striking fact, that manufactures of the United States, under low duties, affording but incidental protection,

within thirty years after the country had achieved its independence, had nearly overtaken England, which required 500 years to reach the same goal. Mr. Coxe's work further proves, that cotton factories were well established and able to stand alone, in 1810, in Rhode Island, Connecticut and Massachusetts; so it was with regard to all other branches of manufactures, with respect to which the statistical details gleaned by Mr. Coxe are most abundant. From his report Mr. Benton quotes very copiously in support of his general proposition. Two passages, in italics, Mr. Benton thinks deserve marked attention. They are as follows:—

*"The facility of retaining and steadily extending this valuable branch (the manufacturing) of the national industry, is manifested by its very early and spontaneous commencement in every county and township, and by its nearly spontaneous and costless growth, with such aids only as have not occasioned any material expense or sacrifice to agriculture or commerce, since they were chiefly incidental to necessary revenue, or resulted from our distance from the foreign consumers of our productions and manufactures of our supplies."*—Page 50. *"Such are the principal facts which occur to recollection at this time, evincing the benefits to owners and cultivators of the soil, from the manufactures which have arisen unforced in the United States. Their principal protection by duties is incidental. Those duties were imposed to raise the necessary revenue, but greatly favoured the manufactures."*—Page 29, Introduction.

"*'Such,'* exclaims Mr. Benton, *'were the causes of the growth of manufactures among us. They grew up of themselves, without the knowledge of politicians, and without any aid from federal legislation,* except the incidental assistance from the imposition of revenue duties. Their growth was natural—without injury to commerce or agriculture—without injury to revenue; and, what is not to be forgotten, not only without a word of discontent or dissatisfaction in any part of the union, but with the absolute approbation of all.' Mr. Benton then dwells upon the fact, that Mr. Coxe, *looking to the future, says not one word about a tariff*; the word *tariff*, is not once mentioned in his book. He speaks only of a *safe, cheap, benevolent, and infallible method of promoting manufactures*, by the diffusion of skill, multiplication of machinery, adoption of new improvements, the application of steam-power, the education of the operatives, and the cultivation of good feelings in every part of the union; *'but not a word,'* adds Mr. Benton, *'about protective duties and minimums—not a word about the tariff.'*

"Mr. Benton next adverts to the present condition of manufactures, taking the census of 1840 for reference. He adduces the statistics of products, contrasted with the capital invested in each branch of manufactures, with a view of showing that they are in various instances from 100 to 300 per cent—enormously beyond the yield of products from capital invested in agriculture or other pursuits. He adverts to the large semi-annual dividends, acknowledged by manufacturers under the protective system, and supposes these are not half the reality, if the reserved surpluses were brought to light. He argues that manufacturers are in no need of such enormous protection as the act of 1842 gives them; and that, to persist longer in requiring more than thirty or thirty-three and a third per cent for a maximum, must be suicidal to themselves, as they will rouse the indignation of the mass of the people, who are already aware that they have been *'most magnificently humbugged and bamboozled.'* Under the good old system, which he recommends a return to, the manufacturers would thrive as they did in 1810, harmony would prevail, and, above all things, *stability* would be secured to them."

The tariff bill, prepared by the Committee of Ways and Means, was rejected, and the commercial tariff of England was as usual urged as a defence of the tariff of 1842, by the Committee on Manufactures.\* We believe, however, that

\* "The committee (on Manufactures, 1844) see nothing in the policy of the other nations which would justify us in adopting the delusive theory of free trade. The new tariff of Great Britain, which has been hailed as the harbinger of a commercial millennium, is highly restrictive in its character. It contains many reductions from her old system, but most of them are of but little practical consequence to us. Some articles which were formerly prohibited she now admits,

intercourse, and its influence on morality and civilisation, has never been more beautifully and forcibly illustrated than in the writings of the great Channing.\*

There are no bonding warehouses in the United States, and this circumstance adds to the other restrictions of the whole fallacious system of customs duties and regulations, which we have endeavoured to exhibit in greater detail than may have been necessary, were it not important to afford such information as we have been enabled to collect, upon a question so interesting, to the two greatest commercial and maritime states in the world.

If there be one course of policy, more than another, which we would advocate—to which we would devote our labours, in order to aid in obtaining the only certain *guarantee* of peace and of friendship, between two great nations, who, in language and race, are one people—that course of policy is to establish the least possible restrictions on the interchange of the commodities of the one country in the other—upon the arrival at, remaining in, and departure from, of the ships and citizens of America, in every British port and place in the universe—of British ships, and subjects, in every port, and place, within the American regions.

If ever the history of the world presented two states in a position, and condition, to do each other the utmost possible good, or the greatest possible evil—such are the actual positions, and actual conditions, of the United Kingdom and the United States. These constitute subjects of serious consideration for the governments, and for the people, of both England and America.

Awful, indeed, would be the consequence, if those wild or foolish politicians, who, from ignorance, vanity, ambition or with more dangerous and unprincipled designs, would involve the British and American powers in the certain calamities of war, by misguiding the people, and the governments, of both countries. Civilisation in America, and in Europe, would, for the time, be paralysed; and, not only the present generation, but succeeding generations, would suffer, grievously, by an interruption of peace, and intercourse, between the members of a great family:

1841, there were sixty-eight ships laden in whole or in part with grain from the United States to Great Britain; and the average length of the voyages was thirty days. In every point of view in which we can contemplate this subject, we discover nothing to encourage the hope that we may soon find in the English market a demand for our surplus grain at remunerating prices."

\* The exhortation of the philanthropic Channing, contains the following beautiful passage, given not long previous to his death: "Allow me to say a word to the merchants of our country on another subject. The time is come when they are particularly called to take yet more generous views of their vocation, and to give commerce a universality as yet unknown. I refer to the juster principles, which are gaining ground on the subject of *free trade*, and to the growing disposition of nations to promote it. Free trade! this is the plain duty and plain interest of the human race. To level all barriers to free exchange; to cut up the system of restriction, root and branch; to open every port on earth to every product; this is the office of enlightened humanity. To this a free nation should especially pledge itself. Freedom of the seas; freedom of harbours; an intercourse of nations, free as the winds; this is not a dream of philanthropists. We are tending towards it, and let us hasten it. Under a wiser and more Christian civilisation, we shall look back on our present restrictions as we do on the swaddling-bonds by which, in darker times, the human body was compressed."

who, though divided as to their governments, are, in respective prejudices, bound together as one people speaking the same language; of being educated in lessons are taught,—and trained at firesides, where children the same virtues; by reading the same literature, laws,—professing, generally, the same religion; by common associations; practising, from hereditary and common habits, until a very late period, a common history, their vices and virtues, and their folly and wisdom in

It has been the long, and serious, contemplation of which has at all times,—while in America,—and while and will, hereafter, urge us to advocate and promote politically, morally, and honourably, can strengthen to maintain, in peaceful harmony, the whole British Empire of America.

THE END.
